Toncan Metal News

Vol. 1—No. 3 PUBLISHED IN THE INTEREST OF BETTER SHEET METAL September, 1916

Bottle Made of Toncan Metal in Fine Condition

It is a matter of five years since the gigantic Bromo-Seltzer bottle was placed at the top of the Emerson Building tower, Baltimore, and the Toncan Metal Sheets from which it is constructed are still in prime condition.

No repairs or replacements because of corrosion of the sheet metal have been needed since its installation. Yet all parts of the bottle are exposed to the elements day after day, year in and year out. Heat, cold and moisture have not affected the Toncan Metal.

The bottle is 51 ft. 2½ inches high and 20 ft. 7 inches in diameter. The body of the bottle revolves constantly at the rate of 1½ times per minute.

16 gauge Toncan Metal Galvanized Sheets were used for the bottle, except the parts which carry the letters, which is made of 13 gauge Toncan Metal.

Here is a monument, not only to Toncan Metal, but to the sheet metal industry as a whole. It is service such as this that inspires confidence in sheet metal and is helping the sheet metal man bring back some of the trade which has drifted away because of the unsatisfactory service derived from short-lived sheet metal.

Answers to Questions

F.C.R.: (a) Yes. Toncan Metal is made with Blue Annealed finish, besides the regular Black and Galvanized Toncan Metal Sheets. (b) Seven gauge Toncan Metal can be procured.

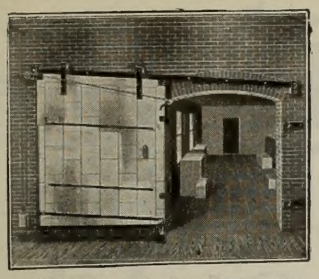
J.D.H.: Rust and corrosion are different. Rust is a natural process, while corrosion can be compared to a disease —something to be retarded. See page 19 in the Sheet Metal Primer, which we are sending you.

G.H.M.: Allow your galvanized Toncan Metal Roofing to remain exposed to the weather for at least a month. Then paint it and you will have no trouble in making the paint adhere.

F.M.E.: Are you sure that **each length** of Conductor Pipe is Toncan Metal? Look for the trade-mark and maker's name die-stamped on each length.

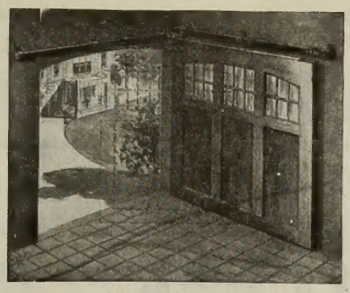
N.L.R.: Toncan Metal is not known by another name. Insist on seeing the trade-mark on each sheet, whether flat or formed into roofing, siding, etc., and on all Trough, Pipe, etc.

A Lost Art Found and Modernized



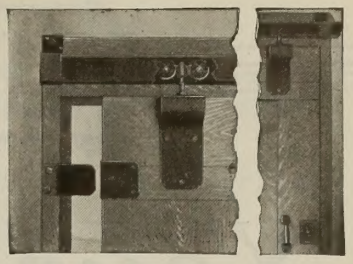
When scientists uncovered pieces of iron which bore evidence of being about four thousand years old, they found the clue to the lost art of durable iron making.

The analyses of these ancient pieces of iron showed that they contained only a very slight percentage of impurities; in fact they were almost 100 per cent. pure. Moreover, the very small amount of impurities which was found in the material was uniformly distributed—or, in the words of the scientists, the metal was **homogeneous.**

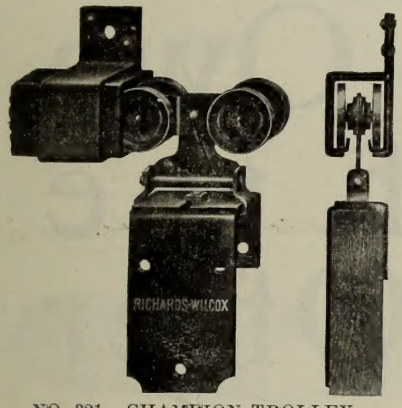


This proved that many things were known about iron and steel making in those days that we knew nothing about. The art was lost.

However, after years of research and investigation, the lost art was found and modernized to the extent that the durable sheet metal of four thousand years ago is now made by modern, scientific methods in larger quantities within less time and at a much lower cost. It is called Toncan Metal.



A metal sheet capable of resisting the ravages of corrosion; a sheet that can be bought by the ultimate consumer at a low price; a sheet in which there is durability and economy in every ounce—that is Toncan Metal.



FIRE DOOR HARDWARE.

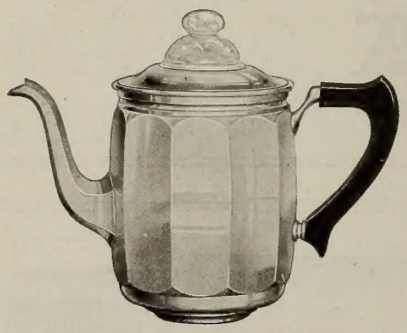
Serve Him As He Would Be Served

When employer or workmen look to you to supply them with the best tools, do you always know what ARE the best? With respect to one line, we are endeavoring to acquaint you with the best, namely

BUTTERFIELD
TAPS, DIES and REAMERS

They are best in the **judgment of users.** Our claims would not be worth much to you if they were not supported by the verdict of the jury—the men who use them to save time and cost, and to get perfect results.

We put it to you that you ought to investigate the Butterfield line, if not well acquainted with it. It is a guaranteed money-line.



Some evidence of worth, is it not?

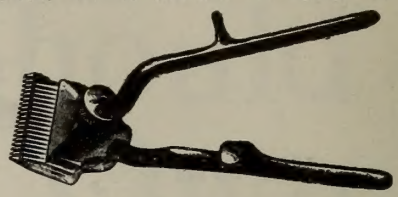
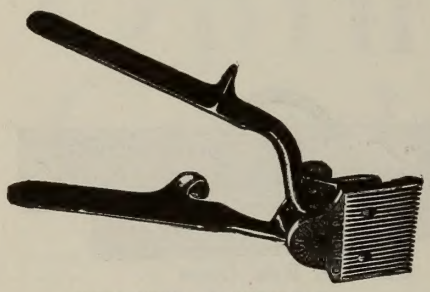
PRIEST'S HORSE and TOILET CLIPPERS

Made by American Shearer Mfg. Co.

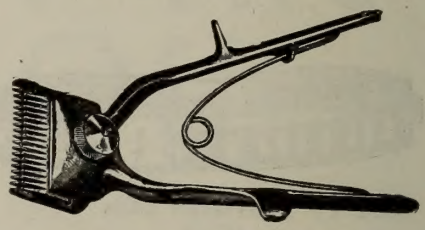


present a complete line at a range of prices covering all requirements of the trade. They are all quality goods, and represent best designs and highest standards of workmanship, regardless of price.
Some styles of Toilet Clippers are illustrated below. All are heavily copper plated and polished before nickeling, thus giving a higher finish, which lasts much longer than ordinary plating. The utmost care is used in grinding and tempering the cutting plates, giving cutting qualities whose superiority may be readily demonstrated by comparison. No. 00 and No. 000 Shaver for beard and neck trimming, are clippers of the utmost lightness and refinement, not paralleled by any other American manufacturer.



STANDARD No. 0, No. 1 and No. 2.
Retailing at about $2.50. High-class barber's clipper.

No. 00 SHAVER
A light and elegant Clipper for beard and neck trimming. Retailing at about $2.25



SPEED
Best low-priced Clipper made. Retailing at about $1.00.

IMPROVED COLUMBIAN
with grooved bottom plate, retailing at about $1.50.

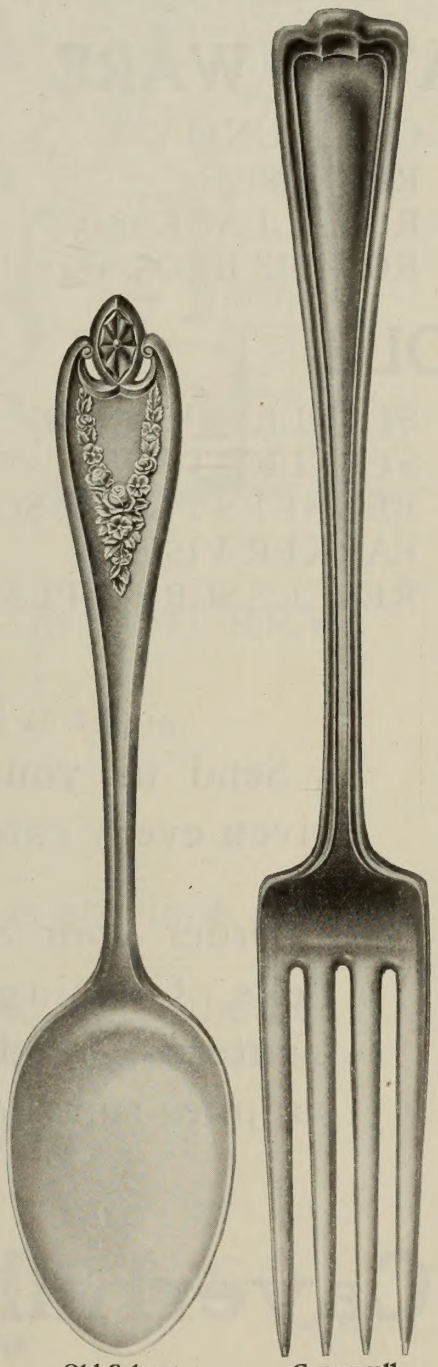
Announcement Important

To simplify and more effectually unite the "Triple Interests" of the retailer, wholesaler and manufacturer of

1847 ROGERS BROS.
Flatware and Cutlery

we have adopted new list prices, as shown in our new Catalogue No. 28, now ready for distribution. The change has been made for three very good reasons:

1st—RETAILERS. We desire and shall hope to establish a ***minimum retail price*** the establishment of which will work directly to the benefit of the retailer, while conserving the best interests of the consumer. The price will afford a reasonable margin of profit, which it is our purpose to protect.



2nd—DISTRIBUTORS. To assist by furnishing a simplified illustrated price list with one trade discount covering the entire line, viz., Flatware, Fancy Serving Pieces and Cutlery—something we never had before.

3rd—CO-OPERATION. In order to encourage and harmonize ***minimum retail prices,*** we have re-issued Catalogue No. 27, with suggested prices to consumer plainly printed. This will aid in the standardization of prices and we are asking the retail trade to adopt them as their ***minimum resale price.***

By effecting this arrangement, our list prices and trade discounts will be consistent and in keeping with trade conditions, and will prove of advantage to the Retailer, Distributor and Manufacturer.

We shall be pleased to mail on request copies of our Catalogue No. 28 and Catalogue No. 27 accompanied by Discount Sheet.

Quality Service

Courtesy in Business

* * *

Fittingly framed and hanging in the Offices of one of the most important Public Service Corporations on this North American Continent is the following

'Did you say Please and Thank you?'

Broad minded men direct the destiny of that Corporation, men who know that public or private enterprises to be lastingly successful must operate for the public good.

Quality and Service are the two important factors in our business life today, but Courtesy is the door through which they must enter.

We are large producers of Hamilton Pig Iron and our output of Open Hearth Steel Blooms and Billets, Iron and Steel Bars of all shapes and size runs into enormous tonnage.

The products of our mills include practically everything that can be manufactured from Iron and Steel and these we distribute to thousands of satisfied customers.

Our business is an extensive one and a successful one. The World is our market: but our prosperity and success in the future, as in the past, depend upon the continued confidence, co-operation and good-will of the people we serve.

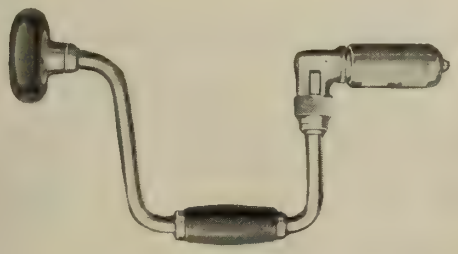
Our Dealer Book, "How to Sell Tools," Suggests Salesmen's Conferences

Have you put this book—"How to Sell Tools" in the hands of every one of your men?

Are you carrying out its suggestions—and checking up the results?



Millers Falls Dealer's Service will mean something definite—something tangible—and something profitable to you, if you try it out at just one point to test its value.

Begin by getting "How to Sell Tools" and keying your tool department up to the standard of efficiency there laid down. Start weekly salesmen's conferences to keep up the interest, and discuss at these meetings the selling suggestions in "How to Sell Tools" and in the monthly issues of the "Millers Falls Star." Put our displays and advertising features to work in your store. Then watch your tool sales for results. They will show and show big.

Absolutely no price to pay but a little effort.

Write us to-day for our plan of Dealer Co-operation and we will help you start something that's worth while.

Bit Brace 732 is a big seller among our better braces because it has universal chuck as well as boxed ratchet and ball-bearing head. Handsomely finished.

They Sell **KIR-BEN** and Pay
TRADE MARK

Cast Ranges

WHAT your customers will answer back to *quickly* is the range to show and demonstrate to them. We say this: the experience of Kir-Ben Agents is that sales are *easy* when the many attractive and distinctive features of a Kir-Ben range are understood by the prospective buyer. Nothing is lacking—in design, appearance, finish, convenience and construction.

The Kir-Ben Agency

is a money-maker for every live dealer—partly because **we make** it so. We work **heartily** with you to make sales. In fact, we are more ready to help than many dealers are to solicit our help.

We provide you with first-class, beautifully printed, beautifully illustrated sales helps. We give you diagrams and full particulars concerning the features of excellence and difference. And if you give us names of prospects, we'll write them direct, *in your name*, strong letters, and will send you carbon copies of every letter so sent.

We Must "Sell" You First

Now our first business is to "Sell" you, the man who sells ranges to others. We must persuade you before you can persuade others. And **you** are both a harder and an easier man to sell to than is your customer; harder because it means thousands of dollars to you in the long run—profit or loss—to become any firm's agent; and easier because you can "size up" a range promptly.

This season promises to be a very fine one for range business. Get the Kir-Ben Agency straightway. Write us this very day for our proposal.

How Can A "Mike" Be Best?

If a customer should ask "How can one micrometer be better than another—don't they all measure accurately?" What would you say?

Here's the answer—the best micrometer is the one that best suits the mechanic's requirements and which is permanently accurate. That is the

Starrett Micrometer

Permanent accuracy in a micrometer can't be had without some adjustment for wear of the contacts, due to long service. Only in Starrett micrometers can you find a simple and reliable adjustment. In our micrometer the movable sleeve which bears the graduations, may be turned with a little spanner wrench to take up any wear, however slight. Thus a Starrett may always be kept as good as new. Of course, the usual features such as decimal equivalents, ratchet stop, lock nut, and special shapes and sizes may be found in the Starrett line but the adjustment is the big point of superiority.

Write for catalog No. 21MA describing 2100 styles and sizes of fine tools.

ORDER FROM YOUR JOBBER

CHANNELL CHEMICAL COMPANY, LIMITED, TORONTO, CANADA

Have you the Stanley Garage Door Holder in stock? If not, write us to-day for our catalog "R" and information. Our national advertising is creating a big demand.

Say this to your customer:

WHEN the wind and rain beat against your car as you "head for the garage," it is a satisfaction to know that the

Stanley Garage Door Holder

will hold the door firmly open for you. Yet a slight pull on the chain leaves it free to close.
We will put on a pair for you.

To people who build garages the cost of a Stanley Holder No. 1774 is unimportant. It sells readily, attracts and pleases a very desirable class of customers and provides a good source of profit for the dealer. It is but one item in our splendid line of Garage Hardware.

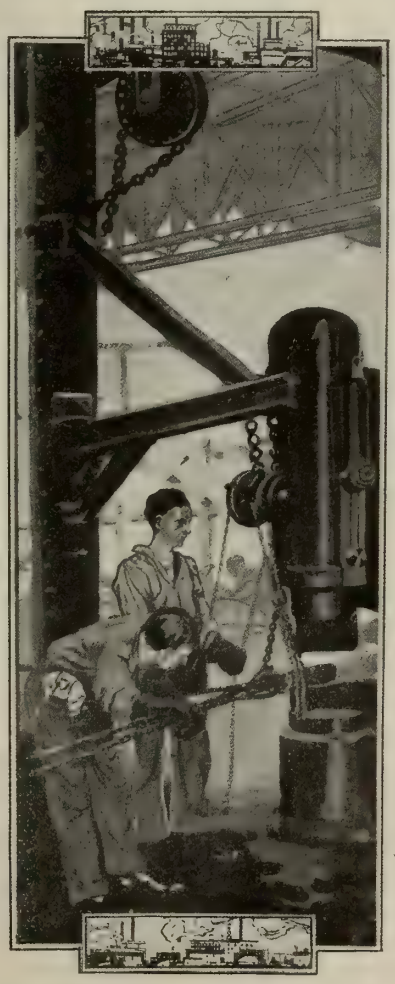
Another Period of Market Activity



New Movement in Steel Increasing in Volume—The Outlook is For Higher Prices—Effects of War on Steel and Metals—English and Canadian Governments Heavy Buyers.

WITH prices advancing at an alarming rate, is it any wonder that the question on the tongue of almost every retailer is, where and when is it going to end? This week — as in many weeks for months past— there have been many price changes, all in an upward direction. Reference to the market reports elsewhere in this issue will show the extent of the price changes of an average week. Is it any wonder that the retailers are in a quandary?

Iron and steel and other metals have kept the trade, manufacturing, wholesale and retail guessing for many months. Precedents count for little under present conditions. Take, for instance, ingot metals. One authority this week stated: "The business of buying and selling metals nowadays is almost a guessing game, with the best of the bargain going to the best guesser." So many unexpected things have happened during the past year that very few of the best authorities feel competent to even predict what may happen in the future.

Steel Shortage Becoming More Acute

It is now obvious that the iron and steel market has entered upon another period of activity and its effect on business will be widespread. Conditions are, of course, abnormal, and the unexpected may happen, but even admitting this there is little or no relief in sight to what is fast approaching a difficult situation. A point was reached some time ago; previous to last June, where consumers would not place contracts for steel unless they were obliged to do so and consequently held off, hoping for a return to more normal conditions, and lower prices. The trend of events since then has upset their calculations and many have been forced into the market, while others will no doubt hold off indefinitely. It is with regard to the latter that the most serious aspect of the situation presents itself, for principally on this account buildings are being held up, public works restricted and many

developments postponed until steel can be obtained within a reasonable time and at a lower price.

It will thus be observed that the present unprecedented prosperity in the steel trade has its disadvantages as well as its benefits, the latter affecting the mills only. It is impossible to enumerate the finished products that have advanced even during the past twelve months, as so many lines have been affected. All kinds of machine tools and heavier equipment are much higher than before the war, while supplies have also been seriously affected. Boiler plates were never so scarce, while steel rails are practically unobtainable inside twelve months. The mills, notwithstanding their increased facilities, are unabe to cope with the demand for steel, and their unfilled tonnages are steadily getting heavier with the result that higher prices are inevitable. Many hardware lines have advanced anywhere from 50 to 400% in value.

For some time past it has been felt in some quarters that higher prices on some lines of steel goods were almost impossible. But the effects of the great war have upset all calculations, and those in the steel trade realize and are ready to admit that something is occurring that never happened before. Three or four months ago it was expected and predicted that different conditions would prevail to-day. Some persons even went so far as to predict that by this time mills would be running out of tonnage. Not a few delayed buying in the hope that lower prices would be in effect by this time. Since that time an entire change has occurred.

Those who thought last spring that the war would be over this year have changed their views. They hold to the opinion that it will continue for at least another year—perhaps much longer. The steel trade appears to be convinced that the war will last throughout next year. There is no evidence that the demand upon the steel mills will become smaller before the end of the war. Should there be a large resumption of construction work the demand would become even greater than it is at present. Domestic requirements for steel are beyond previous records.

No Relief in Sight.

With such conditions prevailing, and unless the unexpected happens, there is very little likelihood of relief in the form of lower prices for another year. It looks as though the present high, or even higher prices will be asked for hardware

(Continued on page 31.)

Writing a Good Advertisement

What Advertising Writers Earn—Helpful Directions to the Untrained Writer—Tests to Apply—Making Advertisements Strong and Resultful

By John C. Kirkwood

Mr. Kirkwood says in this contribution that any man who can express himself plainly and forcefully can become a writer of good advertisements, and he provides the would-be advertising writer with real help in his effort to produce advertisements of selling power. So-called clever and brilliant writing is roundly condemned as being below the truest level of achievement.

IF you have any notion of developing yourself as a writer of advertising, rid yourself of the idea, if you have it, that cleverness or brilliance in your advertisements is required. You may want to write so-called clever advertisements, but let me assure you earnestly

GOOD TIME TO PAINT YOUR HOUSE.

There are many reasons why the Fall is the best time to paint. The fresh paint will not have the scorching heat of summer to contend with, until it is well hardened. There are no spring rains and no flies, or dust to settle in the fresh paint.

We have an immense stock of paints, leads and oils, and can give you the best goods made in this country. Come and see us and get shade cards.

Persuasive "copy," and therefore good.

that those whom you wish to read your advertisements don't want smart, or clever, or brilliant writing.

You may possibly have read or heard of advertising writers making $25,000 or more a year; and if you see their advertisements, and read them through and through, and know that they have been prepared by these high-priced men, you may come to one of two conclusions—either that these men aren't worth the money they are reputed to earn, or that you can do almost as well yourself. You need to be careful, however, in your estimates. The certainty is that these high-priced men have acquired the art that conceals art.

Just a word on this matter of what professional advertisement writers earn. In Canada, many very good writers earn no more than $25 a week; fewer

BE PHOTOGRAPHED

this year on your birthday at Fell's Studio. Phone 19, Seaforth.

Commendable. Says enough. Note the imperative style, and the definitiveness—"on your birthday"—of this advertisement—all in a dozen words.

earn $40; some earn $50; and those who earn $3,000 a year or more are very, very few. In the United States, the advertising writer who can command a salary of $100 a week, $5,000 a year, is a star man. I may add this: The demand for good advertising writers in Canada is growing all the time.

I hope that no reader will conclude that I am endeavoring to undervalue the ability required to be a good writer of advertising; and I hope also that many readers will conclude that it is in them to become producers of good advertisements; for writing a good advertisement is not at all a hard matter for any man who can express himself plainly and forcefully—and most of us are able to do this.

Instructions to the Beginner

Two questions suggest the nature of the text or wording of an advertisement:

What do you want to say?

What does the reader want you to say?

We'll suppose that you are to write an advertisement on a mattress. The reader may not be interested in mattresses, but the article is selected merely to establish the principle. Ask these questions:—

What do you want the prospective purchaser to know about the mattress?

What does the prospective buyer want to know about the mattress?

Your friends can buy anything you can give them—except your photograph.

It took a mighty good writer of advertising to say so much in so few words. Dynamic "copy," because it sets the mind a-going, and the will resolving.

The beginner, and the so-called clever writer, taught perhaps by some correspondence school, will probably begin his advertisement with a high-flown essayette on "Sleep—Nature's Sweet Restorer," and will use up a large quantity of adjectives. But the prospective buyer doesn't want any such beginning. Why, then, should the writer insist on giving his prospect something not only not wanted, but positively objected to?

It is quite permissible, and is generally quite right, to make some preliminary appeal to the reader's interest, by such headlines as these, for example:—

Are you a good sleeper?

Waking up unrested.

Sleeplessness and the mattress.

Testing an Advertisement

When you have written the text of your advertisement—"Copy" is the word used in the profession—test it by ascertaining if it answers this question:

Does it give the information the prospective buyer is likely to require?

NORTHERN WOOL MEANS COMFORT AND WARMTH.

We emphasize Northern because Northern wool is different from other kinds.

Nature protects Northern sheep from cold and snow with an unusually long, tough, warm wool, just as she protects Northern fur-bearing animals with a long, thick fur.

Made by a special process, Patrick North Country Cloth retains all the weather-proof qualities of the original wool fibres. That is why you can count on Patrick Coats to keep out wind, cold and moisture, to wear long, to make you Bigger Than Weather.

Patrick Coats for grown-ups and children are fine for all out-dooring, from motoring to skating, from walking to sleighing. Other products — outing jackets, auto-steamer rugs, great coats and sweaters.

The Patrick Book, illustrated in colors, you can have for the asking.

The headline sums up the argument. Note the reasonableness of the argument. Also note how suggestive the "copy" is. This advertisement is manifestly the work of a highly-trained writer.

Applying this test you may find that you have omitted particulars about the nature and color of the fabric of the mattress; about the filling; about the weight and measurements.

There you have it: Give the reader your argument and information, and also provide answers to his or her probable or inevitable questions, should a purchase be contemplated.

Visualizing the Buyer

You cannot write a good or strong advertisement without visualizing the buyer, and placing your finger, so to speak, on his or her pulse; and without conjuring up his or her probable or possible attitude towards your proposal.

It may be that you are to prepare an advertisement on footwear; or furniture, or a food product, or tools. What the particular article is doesn't matter much. What does matter is—how is your proposal likely to be received? Are you addressing prospects likely or unlikely to be attentive and responsive to your proposal? These questions you

must answer, and in the light of the answers, you will know what and how to write.

Say something in your headline or opening sentence that will in your judgment arrest attention and hook it. You can do this if you imagine yourself to be addressing some real person—some person whom you know by name and whose custom you want. What will persuade him or her to buy what is advertised? The answer to this question will give you your "copy" material.

KEEPS CHILDREN HEALTHY AND HAPPY.

No ordinary child can thrive on the cold, draught-swept floors of homes ventilated (?) by open doors and windows. Nor can any child thrive in hot, stuffy rooms filled to the danger point with breathed-over, worn-out, vitiated air. And there are thousands of adults who can't either—proved by their everlasting headaches, insomnia, dull feelings and kindred ills. Foul air is just undermining their health too. Only they seldom realize it till too late.

Furnace heat is healthful, economical and satisfactory.

A good warm air heating and ventilating system, besides perfectly heating the house completely renovates and humidifies the air—on an average of three times per hour! It draws in fresh air, superheats it and sends it all over the house, keeping every room full of pure, revitalized, refreshing warm air. And such results as these, remember, you can get from no other direct heating system.

Then consider the economy side. The right warm air system properly installed saves first cost, saves fuel cost, saves operative costs, saves repair costs, saves time, trouble, puttering around. And, you don't sacrifice one particle of comfort or service

Heating Plan Free—Amazing Book Free

If you are interested, we will send without obligation, a complete working plan for installing a warm air heating and ventilating plant in your home, drawn up by expert engineers to meet your individual requirements. And with the plan, we will send the name of a local dealer capable of installing it, skilfully and quickly. But right now —

Send for Free Book.

This book has made thousands realize the tremendous significane of the warm air heating and ventilating idea. It is packed with heating facts, backed up by signed opinions of the medical profession—things you should know for your own good.

It's free! Write for it To-day.

Very interesting "copy;" informative, persuasive, urgent. Note in particular the appeal of the headline and opening sentences.

Making Advertisements Strong

Writing a good advertisement where the space at one's command is limited, may come to be like writing a telegram in ten words: The first attempt may include too many words, and something must be struck out or altered or abbreviated without sacrificing clearness or definiteness. The work of condensation may require the transposition of words or phrases, or other alterations, but the final result will tell everything that at the beginning seemed impossible to express so briefly, yet so lucidly.

Writers of mail-order advertising and of the descriptive matter which goes below illustrations in a mail-order catalogue, know how to write with brevity, yet satisfyingly. Usually they are under the necessity of cutting out sentences, phrases and words from their first attempt. Probably the original draft of their text matter or "copy" was very much longer and looser than what survives the pruning process. It surprises even an experienced writer how much can be deleted without loss, but, on the contrary, with real gain in clearness, terseness and force.

Not what you dash off is likely to be your best effort, and should not be your final effort. Write down what comes to you. Write down **all** that comes to you. Then examine what you have written. Often you will find that you can cross out the first two paragraphs without sacrificing anything of value. Often you will find the best beginning in your third paragraph. Sometimes you may find that transposing paragraphs adds greatly to strength and orderliness of thought and statement.

The Writer's Style

The character or temperament of the writer of advertising is frequently revealed in his style. One man will use short words and short sentences. Another will manifest a tendency to be wordy. Another will embroider his writing with colorful adjectives and phrases, and elaborate it by redoundant sentences. But the great aim should always be simplicity, directness, clearness and sufficiency of information. Brevity is secondary to these things.

It is to be remembered that the object of the written and published advertisement is to make sales. This being so, anything in the writer's style or "copy" that subtracts from the main purpose of the advertisement—this by over-statement or under-statement, or by diffuseness, or by lack of climax—is bad.

YOUR BATH.

Your bath should be a distinct pleasure instead of a part of the day's routine. The soap makes all the difference.

Ivory soap lathers so freely and feels so mild you can take great handfuls of the bubbling lively suds and rub them into the pores.

This is far different from rubbing soap on a wash-cloth and passing it over the skin. You enjoy not merely the cleansing effect of the pure white soap and the clear sparkling water combined in the millions of minute bubbles but also the refreshing action of a thorough massage.

Afterwards, the smooth Ivory lather can be rinsed out as easily as it is rubbed in. Every particle of the soap is loosened and dissolved immediately, leaving the pores clean in the strictest sense.

The rubdown can be as brisk as you wish because no part of the skin is made sore or sensitive by the soap. And last, but not least, from the time you step into the tub, the floating cake is right at hand and in sight.

Well-written "copy" by a high-priced writer. Gives one fresh knowledge about soap and bathing, and is therefore interesting. And creates a desire for Ivory Soap that will almost certainly lead to its purchase and use.

"Tell it and sell it." Let this be a watch-phrose.

Put Urgency Into Advertisements

Sometimes the public actually wants advertisements to stimulate to decision and action an apathetic or resisting will. Suppose, for example, that you are conscious of a poor use of your spare time, and that there is in you a feeble desire to use your spare time for self-improvement. Suddenly you see an advertisement that challenges your interest—the advertisement of a course of physical training. You read that one of the reflex results of the course will be a strengthened will power. The very thing that you feel you need most. In the light of your condition and irresolution, you want that advertisement to be tremendously strong and urgent—to inform you, rouse you, persuade you, and make you decide to take the training advertised.

Combination Davenport and Divanette Sofa Beds in Special Selling Monday at $26.00.

A stately sofa by day, and a comfortable bed by night, offered at a price that brings this great convenience within reach of every home.

The Davenport sofa bed or divanette is one of the most convenient pieces of furniture one can have in the house, for it can be used in living-room, den, bed-sitting-room, sunroom or sleeping porch with advantage, and is particularly useful in small flats or apartments. These offered Monday at this remarkably low price are in quarter-cut oak, in fumed or golden finish, and some in mahogany finish. All have upholstered backs and spring seats, covered with pantasote or green denim. They have panelled ends and wide arms. Spring of bed has all-steel frame, with heavy link weave and helical spring ends and sides. All are in Pullman revolving style, easily transformed to double size bed. Extra special Monday each $26.00

"Copy" with a very definite appeal in it. Supplies desired information with satisfactory fullness.

This brings me to a point. Advertisements, like flesh-and-blood salesmen, ought to be keen and urgent. Just as we do not want to be served by limp, uninterested and uninteresting, easily-refused salesmen, so we do not want the advertisements addressed to us to be cold, dull, and devoid of conviction and urgency.

* * *

I am addressing myself to men who are in earnest in their desire to write good—not clever or brilliant— advertisements; and who are ready to take time and trouble to achieve their desire.

The Carola Co. of Canada has been incorporated, with a capital of $40,000, divided into 400 shares of $100 each. The head office of the company is to be situated at Toronto.

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVIII. TORONTO, SEPTEMBER 30, 1916 No. 40

EDITORIAL IN BRIEF

DO NOT waste paper.

* * *

ANOTHER week of good weather, good business and sweeping victories.

* * *

AS A factor in the high cost of living the high cost of labor should not be overlooked.

* * *

THE crops won't be as big as we wanted, but we are going to get good prices for them.

* * *

THE Bulgarians have occupied Drama and are now rehearsing for an uninterrupted season of tragedy.

* * *

"ADVANCES were made in Nevolen, Karajovo, Dobrudja." This is the sort of thing you read, but not aloud.

* * *

NEWSPAPER report says a man was shot in the telephone booth. This is not so bad. Elsewhere might have been fatal.

* * *

TO THOSE capable of reading the market it has been apparent for some time that paint had to advance. HARDWARE AND METAL was giving the information right along.

* * *

WE UNDERSTAND that many of the agitators against the advance in the price of bread dug into their pockets and their war-time profits and put up for the increased cost of gasoline without a murmur.

* * *

THE hardwareman who has listened to the tirades of motor owners on the question of gasoline prices can smile at the grocer upon whose head has now descended the wrath of a public incensed at bread advances.

IN THE RING

CONVERSATION with a merchant in a thriving town brought out much groaning against the activities of the mail order houses. This man was metaphorically "throwing up the sponge." The mail order houses beat him to it, he said, and while he was losing trade that formerly he had had, the delivery wagon carrying goods ordered by mail order passed his door. But that merchant, it turned out, was doing nothing at all to fight the mail order houses. All he did was grumble. He lashed himself into a perfect ecstacy of rage against this menace to his well-being and progress, but he lacked anything by way of fighting quality. He wasn't in the ring. It developed that he was conducting his business upon non-progressive lines. It never occurred to him to impress upon his customers, all the time, that local buying means local prosperity; that his store was a place where a customer could get one hundred per cent. satisfaction; that he could deliver the goods.

Another merchant in the same town is giving the mail order houses a run for their money. As he put it himself, he is in the ring and his sleeves are up. He has a bright store. He is continually making special displays and catering to trade which is seasonable. He advertises. His staff, down to the junior, are a bunch of live wires, and he himself is the battery. Business is good with him. The only time he mentions the mail order houses is to say that he thinks he is "trimming" them!

There's the difference between the two men. What's the answer? If you are menaced with fire, you fight the fire. If infantile paralysis is attacking, the doctor and the parents of the child concerned do not throw up their hands and grumble. They fight.

Are you in the ring?

SPECIAL PAPER PRICES FOR CANADIAN BUYERS

THE most important factor, says THE FINANCIAL POST, in the increased cost of paper in Canada is the increase in the cost of labor. Canadian mills are exporting about 2,000 tons of paper daily as against less than 1,000 during the same time in 1914. All publishers will rejoice that Canadian mills are so prosperous. They deserve it, for many of them have been through most troublous periods. But is it quite fair to Canadian publishers, who are the mouthpiece of the people of Canada, that this country should suffer in any way in order to supply

our neighbors—and many of them our competitors—across the border?

In some big lines of steel, U.S. manufacturers have two prices, one for their home buyers, the other for export. The price to the home buyer is sometimes a third to half less than the price to Canadian and other foreigners. A Pittsburg metal market report recently quoted bars for home consumption $2.60, for export $3.50. This has handicapped some Canadian manufacturers in their competition with U.S. manufacturers in the same line. We think shareholders in Canadian paper mill securities would not object—but rather encourage—the adoption of the same policy on paper in this country.

THE FIXED SELLING PRICE

IN last week's issue reference was made to the steps taken by a silverware manufacturing firm to enforce their selling price in the case of a departmental store's policy of price-cutting. There is, perhaps no problem before the trade to-day which presents more complex phases or is more hotly debated. Retailers are not agreed on the question of fixed selling prices. Some favor the plan while others oppose it most emphatically.

Not a whisper of protest would be heard from the retail ranks if the manufacturer fixed a minimum selling price which gave the retailer a fair profit. Under such circumstances the retailer would be put on an absolute parity with the departmental stores and would be protected from the business-wrecking methods of the price cutters. It was this feature of the plan which was commended by HARDWARE AND METAL last week. If all firms followed the policy of the company mentioned, the retailer would profit because he could sell on an equality with all opposition.

There is, however, this feature of the fixed selling price policy that the figure set does not always assure the retailer a reasonable profit. And so the question is fought out wherever men in the trade get together, at conventions, even in the courts. Many manufacturers have taken the sound position of fixing a rigid minimum which gives the retailer a fair margin, however, and they are undoubtedly entitled to the support of the retailers in maintaining that price.

PRICES PRACTICALLY NOMINAL

IN the course of an address delivered at a recent meeting of the Canadian Hardware Manufacturers' Exhibitors, reported in last week's issue of HARDWARE AND METAL, President Taylor referred to the many difficulties which Canadian manufacturers have to face at the present time.

He referred to the scarcity of supplies and the labor problem, both of which are causing concern to manufacturers. Continuing President Taylor said in part:

> "The difficulties to which I have referred would in themselves be sufficient to make our position precarious, even in the home market. But to-day we are facing another danger, more serious, perhaps, than all the others put together, and that is the determination of United States manufacturers to foster the development of subsidiary steel industries in their own country, by methods that will automatically retard the development of similar industries in Canada. Bars, for example, were quoted in the *Daily Iron Trade and Metal Market Report* for August 10th, as being available at Pittsburgh for home users at $2.60, when the price for export ruled at $3.50 or higher. Dependent as we are upon United States mills for such material, how long, let me ask you, would it be before we were driven out of business altogether?"

The foregoing states that bars cannot be purchased by Canadian manufacturers at the prices quoted in American market reports. The same could be said about a great many steel products at the present time. Whether or not United States firms are endeavoring to retard the development of Canadian manufacturers might be a hard question to determine at the present time. Quotations on many steel products to-day are largely nominal.

The large mills have prices which they regard as "the market." American as well as Canadian buyers approach the mills, but are unable to make purchases at the so-called market prices. Prices—stated by the mills to be the market prices are frequently quoted in American papers—but very often purchases cannot be made at the prices quoted.

This condition has been caused by the tremendous demand for steel, and the fact that the mills are sold up far in advance—in many cases as far in advance as they care to sell. The mills are now in a position where they can almost pick and choose orders. Their reason for not wanting to sell ahead is not necessarily because they expect higher prices. It is rather because they feel that to sell farther ahead than they are sold at present would be largely a gamble. Many buyers not accustomed to buying so far ahead would not be able to foresee their needs for such a great distance in the future. Complications—unpleasant ones—might be the result.

In the case of wire products the published prices in leading U. S. papers are the official prices of leading interests. Yet it is hard and in many cases impossible to buy material at the published prices. Quite recently one of the best market papers in the United States reported a quotation of $3.70 having been made on painted barb wire, when the official price was $2.75.

The same condition rules in regards to tubular goods, plates and sheets.

The whole situation is unprecedented and one that some months ago would have been considered as impossible.

New Brunswick Merchants Convene

Provincial Branch of the R.M.A. Meets at St. John — Discussion With Wholesalers re Selling Direct to the Public—An Address on Credit Problems

A COMMERCIAL rally of the retail merchants of New Brunswick was held in St. John on Tuesday and Wednesday, September 19 and 20, under the auspices of the New Brunswick Provincial Branch of the Retail Merchants' Association of Canada. The gathering was not so much a convention as a get-together affair for the purpose of getting better acquainted with each other and enabling the members to get a better idea of the strength of the organization and its greater possibilities. Some time was devoted to the discussion of the problem of retailers and one of the most interesting sessions was that at which they met representatives of the wholesalers for a discussion of matters of mutual interest.

A large hall, suitably decorated, had been prepared for the occasion and this presented the appearance of a miniature exhibition, as a large number of manufacturers had taken advantage of the opportunity to present their wares to the eye of the merchants.

On Tuesday afternoon the opening session was held and at this hearty welcome the members were extended, by A. Murray, of Fredericton, president of the provincial branch; His Worship, Mayor Hayes, and J. A. Likely, president of the Board of Trade.

A. O. Skinner, president of the local association, gave a powerful address on the work of the association. He referred to the fact that by its very nature the Retail Merchants' Association was in a position to secure legislation which no other organization can secure. The organization has already secured legislation which has enabled it to conduct its work along more extended plans. He referred to the great improvement in collections since the organization had been founded. Thousands of dollars had been collected which had previously been on the doubtful list, and the association was making for the better conduct of business and the less danger of losses on the part of its members. Mr. Skinner made reference to the spirit of co-operation existing among the retailer, the wholesaler and the manufacturer.

On Tuesday evening the delegates attended a theatre party at the Imperial Theatre, where a special programme had been prepared in their honor.

Wednesday Deliberations

On Wednesday morning there was a conference with representatives of the wholesalers. Addresses were given by F. W. Hoach, president of the Canadian Credit Men's Trust Association (Maritime Division), and by Allan H. Wetmore, president of the New Brunswick Wholesale Grocers' Guild. Both gentlemen dealt with problems of mutual interest and were given a careful hearing. Then followed a discussion of the matters mentioned by the retailers; grievances were aired and subjects which had been the cause of trouble between the two branches of business were talked over frankly and with evidence of good results. Both representatives of the wholesalers assured the retailers of the sympathy of their organization with the objects of the Retailers' Association and assured them of their active support in dealing with any troubles which should arise or in any efforts they made to improve trade conditions.

One of the matters which cropped up most frequently was the selling by wholesalers and jobbers to private individuals, boarding-house keepers, hotels, lumbermen and others not in the retail trade, to the detriment of the retail merchant.

Assurance was given by Mr. Wetmore that the members of the grocers' association were opposed to this practice, and a representative of a hardware house said that he believed that the hardware men were in earnest in their efforts to get away from this business and that most of the infractions of the rule now are due to the desire of clerks and other subordinates to help their friends.

The address given by Mr. Roach is as follows:—

When your secretary first asked me to address the Retailers' Association, I certainly felt, and still feel, most diffident in doing so, as I realize there is so little I can say to the intelligent and up-to-date membership of this association that is new or that is of interest, but this is more than over-balanced by the pleasure and honor it is to me to have the opportunity of speaking for an association whose interest is so interlocked with the one I am addressing.

Co-operation, I might say, is the corner-stone of the Credit Men's Association; it is the reason the association exists. The chief object is co-operation among credit men, to avoid bad debts in the first instance, and if bad debts do come about, to lighten them as much as possible by co-operative action. But it has developed much in advance of this and now one of its chief activities is to assist the honest and deserving debtor who, through some reason or other, has become embarrassed financially and place his business on a solid footing again. This has been done on many occasions, and is being done to-day with several accounts in this district.

When I first learned of the Retailers' Association being formed, I took occasion to speak a good word for it where I could, as I realized that once the retailers got together and worked together to solve their problems, they would be better business men, more kindly disposed towards each other and, as the spirit of co-operation grew in the association, they would desire to co-operate, not only with each other, but with the manufacturer and wholesaler, and this convention conclusively shows that this has come about.

Co-operation cuts out misunderstanding, leads to understanding the other fellow's point of view, makes a broader, better and brighter business man, or any kind of a man for that matter.

I have talked with many retailers of business problems and recommended this and that procedure, and I purpose to speak along these lines to-day.

CAPITAL—The first thought a credit man has in granting credit is, what capital has the prospective customer, either hard cash, ability, experience, acquaintance with the trade, or whatever asset he may have to successfully conduct a business.

The most important of these assets, I think you will agree with me, is honest ability, for, if he has this requisite, he is apt to have well considered his chances to succeed and will not rush into business with insufficient capital, or into a business for which there is no opening.

I think you will agree with me that credit is, in some cases, too easily secured. By this, I mean legitimate trade often suffers by the wholesaler or manufacturer, in his desire to do

business, granting credit to irresponsible parties who are not entitled to credit, but who do a certain amount of business while they receive credit, and assign or compromise when this fails them, and thus do an injury to the legitimate trade that pays 100 cents on the dollar.

The Canadian Credit Men's Association is an association formed among credit men to avoid, by co-operative action, giving credit where it is not deserved, and in this connection, possibly, they are no small benefit in discouraging unfair competition to other retailers.

The interests of the wholesaler and retailer are so interlocked that it calls for no discussion. The wholesaler is deeply concerned as to the success of the retailers, for it is from such that he finds his customers and secures his sales.

At one time there did exist distinctions as to standing and importance in many departments of commerce. For instance, the ship owner did not like to be regarded in the same class as the ship builder, feeling he had outgrown the limitations of the latter, and every general trader advertised himself as "Wholesale and Retail," "Direct Importer," etc., etc., and resented any remark that might imply he purchased in the local market. To-day it is different, the retailer wants his market defined and the purchases of the consumer confined to him because he is a retailer and he asserts that the consumer should give him his trade because he is catering to the community and the community should support him. The retailer is right in this and, generally speaking, the community likes to support the local merchants. The great purchasing class is the woman and as such is most enthusiastic commending the stores of her own town. Should she not do so, it is up to the retailer to supply the reason why.

At one time the wholesaler looked to certain retailers as his customers and could count on their trade and support; the old timer likes to think of those days as ideal, but such conditions to-day are not desired, and if a wholesaler controls a retailer's account, it is because he cannot help himself and will pass it on to another whenever the retailer desires a change, or another wholesaler will take the burden.

INSURANCE—It is the duty of every merchant to carry insurance. Some will say, in fact I had one merchant tell me not long ago, when I commented that his building was a bad fire risk, that he paid cash and that when he locked the store at night, if it was burned down by morning, he was the only loser. Possibly so, but I have recollections of an instance that occurred some few years ago in a Nova Scotia town where the merchant reasoned in the same way. A merchant doing a good business had accumulated, in about twenty years, assets represented in stock, book debts and buildings, consisting of dwelling, store, warehouses, etc., a total worth which he estimated at $40,000. He paid cash, that is, he took his discounts, but did not carry insurance, as there were no fire-fighting facilities in his village and the rates were considered high. Well, one night fire started, no one knows just how, all his buildings, stock and furniture were burned, even his books, as his safe had been sent to Halifax for repairs.

The only asset this man had left was the good-will of his customers and the honesty of those who owed him and knew the amount and would pay him. His liability did not reach quite $4,000, representing his fall purchases which had just been received, but he could not even pay this comparatively small amount and he was at a time of life when it did not seem feasible or possible for him to begin business again.

The wholesale merchants whom he owed, realizing they had also lost a valuable account, worth more to them possibly than the amount this man owed, got together and started him in business again, but he still owes the amount he owed at the time of the fire and probably will for all time.

Insurance is an argument for keeping proper books of account, for if stock is consumed, the insurance adjuster requires documentary evidence to prove the goods were there.

Speaking of accounts, it would be interesting to know just how many merchants are aware of their full liabilities, also their total personal expense, for you will all agree that he should know exactly what his personal expense is and not live out of the shop.

A complete inventory of stock and other assets should be prepared at least once a year and a balance sheet struck. This information should be kept in a safe place, preferably apart from the place of business. It will pay the retailer many times over to strictly adhere to this practice and spend at least a day and study his position as compared with the previous year, the practical effect will be:—

First.—Less "Accounts Receivable" to collect, thus avoiding the temptation to discount accounts at the bank—a very doubtful practice for the ordinary retailer, and one that reflects adversely on his credit and standing generally.

Second.—Less unsaleable merchandise to handle, as he will take intelligent knowledge of what this asset means to him—the source of his profit—the only avenue to get gain.

Third.—He will appreciate what his expense account means to his business; every retailer should know what the monthly charges, including personal expenses, are, every month, even if he has to advance certain charges, he should have regard to the monthly proportion.

Fourth.—Your business will be under control and time will not be wasted finding your bearings; you will know and act promptly in attention to necessary duty.

The retailer should keep his stock and real property insured to 75 per cent of value. The co-insurance clause is dangerous because often misunderstood. Insurance is protection only and the loss you sustain is what is paid irrespective of the amount of your policy. It is the duty of every merchant to guard against carelessness or accumulation of waste material on his premises. He should be as much interested in the protection of his property as the public official or insurance inspector; every dollar paid in insurance losses is a tax on trade and commerce.

The Retail Merchants' Association can do more than any agency to bring about better methods among its members. Proper accounting, not necessarily elaborate, but systematic and constant, insurance protection provided and a conservation of buying opportunities, thus limiting obligations in number and amount—the great danger and temptation of the retailer.

In speaking of co-operation between wholesaler and retailer, is it not incumbent on the retailer, all things being equal, to buy of the local wholesaler as much as it is the duty of the consumer to buy of the local retailer and not from the mail order house?

Some time ago I read of a farmer who wrote his name on a dollar bill and spent it at the general store of his district. In the course of time he received it back and again paid it out locally and for the second time it was returned. The third time he sent it to a mail order house and, of course, he never saw that dollar again.

Speaking of legislation, I would only say that we desire to place on the statute books such legislation that is to be helpful to the honest merchant, be he wholesaler or retailer, and our committee will be glad indeed to confer with a like committee of your organization.

Business is a succession of problems great or small and one must look ahead, plan to avoid difficulties, if it be possible, and if not possible, be prepared to meet them. Since the world began, two heads have been considered better than one, co-operative action by many heads must be infinitely better.

Before I close, I would like to speak of jealousies of one merchant for another, and in this I do not mean retailers any more than I do wholesalers or manufacturers. The only way to cure trade jealousy is to get together and get acquainted; that is, acquainted through friendship. Last fall, I was in a town in Nova Scotia where there are three fairly prosperous stores and it is the custom of the merchants there to place blackboards on their platforms advertising what they have for sale and the price they are paying for produce. Through trade jealousy and watching each other's boards and running up the price on each other's offerings, the day I was there, one merchant was paying 3c a pound for butter more than the market quotations, and I leave it to your imagination what the other merchants said of this fellow, though I understood they were guilty at times of the same practice. This is a town the retailers' organization will be a boon to when organized there.

In conclusion, I will quote, if you will forgive me, a verse of a get-together-poem that should be set to music, as I think it strikes the right spot:—

"If I knew you and you knew me,
'Tis seldom we would disagree;
But never having yet clasped hands,
Both often fail to understand
That each intends to do what's right
And treat each other 'Honor bright.'
How little to complain there'd be,
If I knew you and you knew me."

There is one thing in which I think the wholesaler has been negligent, and that is, the personal acquaintance of his customers at their places of business throughout the country.

It has been my practice for ten years or more, to take occasional trips a few days each month and visit the trade throughout the Maritime Provinces. I find that this is very beneficial to me in doing business aomng those whom otherwise I would not be personally acquainted with.

I believe the wholesaler is not in a position to sit at his desk and judge conditions from reports he may receive from his salesmen, through the press, or by hearsay in any manner. He requires to have a personal knowledge of the district in which he is doing business. He could write a customer much more intelligently if he knew the men, knew his store and knew the conditions under which he does business. At least, I have found it very helpful, and I believe other wholesalers would too, if they had some systematic plan by which they would visit their customers occasionally.

Conference With Wholesalers

One of the most interesting features of the gathering was the conference between the retailers and the representatives of the wholesalers, at which matters of mutual interest were discussed. As a result of this discussion, it is safe to say that the relations between the two branches of business will be more cordial, and that some of the matters which have led to friction and misunderstandings will be corrected to a great extent

A. H. Wetmore's address was as follows:

It was with a good many misgivings that I accepted an invitation of your secretary to meet with you and take part in this conference, not that I doubt the benefits to be obtained from such a meeting, but because of a feeling of my own inability to carry out that part which, because of my position, falls to my lot. But my sense of duty is strong, and if it is in my power, personally, or in my official capacity, to say or do anything which will aid you in creating, or which will aid in leading up to mutual effort to create, a spirit of fellowship that will make for an advance in the economy of distribution of our various lines of goods and thereby benefiting, first, the consumer, secondly the retailer, thirdly, the jobber, and lastly, the manufacturers or producer, I feel it not only my duty to do so, but an opportunity and a responsibility which it gives me pleasure to seize, shoulder, and do my best to aid in bringing about.

In connection with the great National Wholesale Grocers' Convention held in Boston in June, with a registered attendance of over 1,200, which I had the pleasure and profit of attending, I saw a few words written, which I think are very applicable to your association, when it is considered what *organization* and *unity* have already done for you, and also the great possibilities that are before you by strengthening and broadening under the guidance of your very genial, able and diplomatic secretary. They were something like these:—

"What is the ocean but organized units—drops of water? What is the avalanche, but flakes of organized snow? The alphabet—twenty-six units—organized, forms language and the means of communication."

The immensity of these powers, all made up of the most minute, but organized, units, is an inspiration to us in the get-together idea.

It might not be out of place at a meeting of this nature if I should attempt to somewhat justify the jobber's existence and compare what he gives for the toll he takes, and in doing so, I want to give credit to Mr. Forest Crissey for some of these thoughts.

Public opinion has haled "The Middle-man" before its court of criticism to show cause why he should be permitted to live. The consumer and the producer want to know whether the jobber is an unnecessary evil, or a public necessity.

So far as the wholesaler is concerned, he declares he is ready to demonstrate that his is as vital a job as any of the others. Since the agitation of the high cost of living began, the jobber in food stuffs has held the centre of the stage and has been painfully and persistently conspicuous.

The average person has a vague idea that the wholesale grocer simply receives the goods in one door, and ships them out the other, taking a good fat toll for his trouble. What does the jobber give for the toll he takes? You can tell it in one word—Service.

If Mrs. Smith is complaining of the high cost of groceries, the retailer refers to *his high cost of service*, and as an illustration reminds her that yesterday she forgot to order some small item until long after the last regular delivery was made to her section, which necessitated a special trip of the auto-delivery of a mile each way at a cost of, say, 25 cents for a profit of 5 cents. Mrs. Smith sees the point.

But the jobber has no such advantage: he does not come in touch with the consumer or the public, and the masses have no idea of the service he renders. I say that *service* is the most expensive thing a jobber sells. Plain hard work that hardly justifies the name of service constitutes a large part of the kind of service the wholesale grocer gives the consumer through his customer, the retailer.

The stock lists of an average grocery jobber to-day contain from two to five thousand separate and distinct items. A majority of these articles are brought from foreign countries or distant parts of this country.

Crissey says: "We are food explorers, ransacking the entire earth for the things with which to satisfy the cultivated appetite of the consumer."

If the teachers in our schools would send their pupils to a grocery store, and have them secure a list of articles in stock, learn the localities from which those articles started on their journey, and then take a map and draw a line from the home town to the town of the original production of each item, those pupils would receive a most comprehensive lesson in geography and a practical demonstration of exports and imports.

But this would not be complete, for each little community has its own peculiar food tastes, and there are many items of food that are in constant demand in some localities that would not be found on the shelves of the home town retail store. The correct and only point of convergence for the food lines on a map such as suggested, would therefore be the *nearest grocery jobber*, and from that centre those food lines would radiate to every quarter of the globe. Among these would be the tea lines to China, Indian and Japan; coffee to the Red Sea districts, Java and various points in South America; spices from African and South India points; nut lines would run to France, Spain, Italy, Brazil and Virginia, U.S.A.; dried fruits to Turkey (except in war times), Greece, Spain, California, etc. This might be kept up almost indefinitely. There is not a country that does not yield its tribute to the table of the consumer of this Dominion, and the grocery jobber is the channel through which these delicacies or necessities are located in their places of origin, and brought within reach of the ultimate consumer.

The money-banker gathers from the most available sources, the coin and currency with which to capitalize the business activities of his territory. The banker is the *middleman* of the money market, and his functions are so well understood by the public that almost nobody questions their necessity.

How about the merchandise-banker? The only way to get a vivid realization of the *service* in this way that the jobber gives the consumer, is to try to imagine what would be the food situation if every jobbing house in this country were suddenly struck out of existence. It would reveal as nothing else could the unassailable position of the jobber in the economic distribution of food stuffs.

Now turn to another kind of service—the money end of the jobber's relations with the retailer and the consumer.

The financial service is just as varied and as many sided as that expended upon the goods themselves, and it is as unknown to the average layman as is the service relating to the commodities handled. We are not only bankers of merchandise, but we are very often *bankers* in a far more literal and financial sense. Certainly we are at times giving men a line of credit that a "money-banker" would not carry for a month. We realize that a retailer is usually up against the same proposition. His heaviest customers are almost always his slow-paying friends. The family who flits off for the summer pays their grocer when they get back or *get ready*, and the retailer cannot overpress this class. These customers, combined with the "dead-beats" and the unfortunates, go to make the book accounts of a retailer a terror to him. They think they owe the retail grocer, but in many instances they owe the jobber because he has to carry the retailer. Of course, there are some retailers to which this does not apply, but they are rather the fortunate few. If these acocunts are "open," and I am sorry to say some retailers are still old-fashioned enough to seriously object to drafts, we go to the bank and borrow money, paying the interest in advance, to finance them, and if interest is charged our customers for overtime we are looked upon as mean. Banking is supposed to be a business *to be desired*, but every jobber is doing some of it, which he would gladly relinquish.

All jobbers would be glad if they could turn all this kind of service over to special and expert hands, but provided the customer is honest and energetic and has a location that should command a good trade, it is not *bad* but *good* business to help him financially and morally, and educate him in the meantime to stand on his own feet. This service of furnishing the retailer with capital, and teaching him how to handle it, is one of the heaviest and most unprofitable that rests on the jobber's shoulders.

There is another important angle to the jobber's practical service. This concerns the transportation problem. The jobber's business life is a continual fight to reduce the cost of distribution. He studies freight tariffs and conditions to the ultimate benefit of retailer and consumer. To illustrate: Beans at the present time represent a lot of money and still are a staple article and must be carried by each retailer, but unless bought in *carloads*, the extra freight would add very materially to the already high cost, and no ordinary retailer or collection of them would want a carload of these. The jobber, with *his* organization of distribution, brings along the quantity and dispenses them to his customers in quantities as desired, a saving by this service alone of twenty-five to thirty cents per bushel. Onions from Egypt, Spain, Bermuda, or Ontario, are just as good examples, and when it comes to canned salmon from British Columbia, or dried fruits from California, the saving is in even greater proportion. In a word ,the jobber is an expert in saving freight costs. This service is routine and competition sees that the consumer gets his good share of the benefits derived therefrom.

If the margin saved by the jobbers of a locality by this one means were suddenly added to the retail price of groceries, the consumer of that section would put up a cry of distress at the advances. As an economist, then, in distribution, the jobber renders a constant service to the consumer for which he gets blame (because the public have not knowledge of the facts) rather than credit.

I think experience has long since established that the most economical method of distribution of food products, from manufacturer or producer, is through the wholesaler and retailer. Each performs a distinct service. The jobber gathers the products from the four corners of the earth, stores them, and has them ready for distribution to the retailers, from where they are passed on to the consumer on demand. The wholesaler also advances the necessary credit—i.e., finances the transaction. He secures the large-quantity prices, and the advantages of car-load freight rates. Manufacturers cannot supply retailers promptly direct from factory, and their only reasonable method is through these distributing depots—the jobbers; not only because of more prompt delivery but the *service* to manufacturer, retailer and consumer is less expensive when the wholesaler is employed than through any other medium.

I think I have clearly shown that the jobber renders service and no small amount of it, and he is fairly entitled to something in the way of toll. About the only question that remains is whether he takes an unreasonable amount of toll—whether he is able to force the retailer and finally the consumer, to pay unfair wages for service rendered.

In answer: Can you point out any who have made large fortunes in it. Some, of course, are comfortably well off, but the bankers tell us continually that there is not another line of trade, industry, or commerce, involving equal capital, that does not bring a larger pro rata return than does the business of jobbing food products.

The average net profit of the wholesale grocer does not amount to more than a hardware man's *cash* discount. In other words, his profits do not exceed two to two and one-half per cent. on his turnover. Many are making less than that.

If we were to give the retailers a cash discount of one per cent., and if our own cash discounts were cut off, we should eliminate our profits.

The business of which this can be said certainly cannot be rightfully accused of taking an unfair toll for services rendered, and those services have been proved indispensable to the retailer and the consumer.

Our service, then, might be said to consist of being "Merchandise-Bankers," "Money-Bankers," "Financial Educationalists," "Transportation Solvers," and one of the economical Trinity of Distribution—i.e., Producers and Jobber and Retailer. And for this service we take a toll equal only to a reasonable cash discount.

In dealing with this matter I have only attempted to follow along the lines of service to the public as supplied by the jobber of food products, but I have no doubt at all that the "middleman" or jobber of any other lines can prove as conclusively that they are as fully justified, on account of service rendered, to take the toll they do for bringing within reach of the retailers and consumers the various goods in which they are interested.

The discussion which followed the addresses was participated in by many of the merchants present. One of the chief points brought out by some of the speakers was the desirability of greater efforts to do away with selling in retail quantities or direct to the consumers by wholesale houses. Assurance were given that the Wholesale Grocers' Guild of St. John were doing their best to get away from this practice, and the executive promised stronger endeavors to convert the wholesalers in other centres.

The publication of wholesale price lists of groceries and other provisions in the daily papers was protested against, as an injury to the retailer and of no benefit to the wholesaler, and this matter was referred to the executive for action.

In the evening the visiting members were entertained by the local men at a banquet. President A. Murray acted as toast-master, and speeches were given by Lieut.-Col. J. L. McAvity, Lieut.-Col. P. A. Guthrie, Major G. G. Corbet, all of whom told of their experiences at the front; A. E. McSweeney, of Moncton; Mayor Hayes and City Commissioners Wigmore, Russell and Fisher, of St. John; Robert Strain, of Woodstock; W. P. Jonah, of Moncton; W. E. DeWolfe, of St. Stephen; F. W. Daniel, of St. John; J. W. Scovil, of St. Stephen; A.

O. Skinner, of St. John; and A. P. Dewar, of Milltown.

In the course of his address the president, A. Murray, said:

"Never in the history of the retail merchandising has there been more need of the great spirit of co-operation than there is to-day. I want to explain to those who are not of the trade just what the association stands for. It is not for the purpose of fixing and governing prices, but it is rather to work out many things which our association and our complete co-operation could help us to achieve.

"To accomplish the best results it is necessary that we have confidence in our fellow-merchants. We must be honest in the things which we ask him to assist us in bringing into force, and we must be in every sense fair to him. We must realize that he is not an enemy. We must realize that by working together we can achieve results which we cannot possibly attain if we work from an individual point of view.

"The retail merchants of New Brunswick pay a very large portion of the taxation, and they certainly are the ones who are responsible for the benefactions and gratuities which the public demand. Why should they not fill a larger place in so far as consideration is concerned in the life of our cities and our province, and if they will join together in an association such as ours, it will assist in making it strong and powerful. That certainly will be the foundation of untold good, not only to themselves, but to the community at large, and the solid opinions of men engaged in occupations scattered all over the province will certainly do much to elevate the tone of our public life and help in improving all its conditions."

ANOTHER PERIOD OF MARKET ACTIVITY

(Continued from page 23.)

lines made of steel, for a long time to come. The problem confronting a great many wholesalers to-day is not so much the high prices as the scarcity of supplies.

Stocks of many hardware lines are cleaned out, and there is little chance of replenishing them for some months to come. Some Canadian wholesalers have complained regarding the action of a few foreign firms in regard to orders placed some months ago. It is claimed that the foreign firms are holding up orders booked months ago at prices much lower than those prevailing to-day. All kinds of excuses are made to hold up the orders. On the other hand, the same firms offer to ship the goods from stock at present prevailing prices, which are extremely high.

A Steel War

It has been hinted in some quarters that there is a likelihood of a steel war after the war in Europe is over.

After the war there will be a huge productive capacity in practically every country, much greater than before the war.

It is reasonable to expect that at the close of the war, when the demand for steel for munitions has ceased, most of the large steel producing plants will be intact. They will be well equipped in every respect. They will have plenty of skilled help. How will they dispose of their output? Will they allow some of their productive capacity to remain idle? It is true that enormous profits have been made in steel, and it may be asserted that some makers can afford to scrap part of their plants. Even though such may be the case it is hardly probable that there will be much scrapping unless it is unavoidable.

The American Metal Market, New York, in referring to the possibility of a steel war, states in part:—

"In some quarters there seems to be a positive conviction that after the war there will be an international commercial war in steel products. The opinion is not universal, but it is expressed in some quarters that must be respected. There is certainly confusion of thought on the subject for there are those whose fears appear to be chiefly whether we shall be able to maintain a large export trade in steel, and others whose expressed fears are that we may not have a high enough tariff to protect our own market.

We are perfectly ready to grant that there will be a large iron and steel productive capacity after the war. There is the direct evidence, in millions of tons of steel a year going out of this country, and hundreds of millions of dollars coming in, that steel is very essential to the prosecution of the war, and it goes without saying that the warring nations are preserving their iron and steel industries, not only the plants but the organizations. At the end of the war the works will be there, many of them, particularly in England, substantially enlarged in fact, and with the men now engaged and those who will return unimpaired they can be operated in full. As to the works in territory captured by the Germans little is definitely known. The usual assumption is that they are practically intact, but one does not know how much more fighting there will be in the territory involved. However, the total capacity possibly in jeopardy would hardly be more than 10 or 15% of the world's total, and thus it is readily granted that with the plant extensions made here and abroad the world's iron and steel making capacity will be greater after the war than just before the war."

Ingot Metal Situation

But iron and steel products have not been the only ones that have caused the hardwareman considerable concern. There are many articles sold in hardware stores which are made partly or wholly from copper, lead, spelter, tin and other metals. Prices of these products have been exceedingly high and have been subjected to many advances since the outbreak of the war.

At the present time lead is showing considerable firmness and prices of all lead products are firm. Some have advanced in price during the week. Lead, however, is so subject to manipulation that little can be said about the future. Some of the largest producers are completely sold-up for October.

Regarding copper, it is felt that a steady market is assured for some months to come. England has just placed the largest order on record. It is for 200,000 tons. This order, it is estimated, will take one-third of the American output for the next six months.

The deliveries are extended over six months and it is understood that the price paid was 26c cash, New York seaboard delivery.

The tin market has remained steady at present levels for some considerable time, and it is felt that present prices are low, when the price of other metals is considered.

It is figured in some quarters that the completion of the 200,000-ton copper deal is regarded in the spelter trade as an indication of an increase in the consumption of copper and that spelter will share in the increase. The market at present is rather dull for futures, but orders for prompt shipment are showing improvement.

Canadian Government in Market

The Canadian Government has recently placed heavy orders for copper, spelter and lead, supposedly for use at the new arsenal at Lindsay. Particulars regarding the quantities and price have not been made public.

Still Higher Prices

Unless, as previously stated, there are some unexpected developments, there is no likelihood of a decline in prices, except in isolated cases. Everything points to another upward movement, and on many hardware lines there will be even higher prices in the future than the extremely high and unprecedented prices prevailing at the present time.

Forgery in Commercial Transactions

Sixth Article in Legal Series—What Constitutes Forgery—The Question of the Use of a Partner's Name—Legal Points Bearing on the Question of Forgery

Written for Hardware and Metal by Walter E. Lear.

(Registered in accordance with the Copyright Act)

THE retail merchant should understand fully the ramifications of the law with reference to forgery. Partnership transactions and the issuing of powers of attorney open the way for sharp practices which often mean heavy losses to the unwary, with no recourse to law open. Merchants should understand what constitutes forgery and what does not; for there are certain considerations which enter into this question that the lay mind has not always grasped.

WALTER E. LEAR

Sect. 1. What is Forgery?

The word forgery is a metaphorical expression borrowed from the occupation of the smith, who beateth upon the anvil and forgeth what fashion or shape he will; for to forge means, properly speaking, no more than to make, or form; but in our law it is always taken in an evil sense (3 Inst. 169; 2 East. P. C. 852).

Section 446 of our Criminal Code, defines forgery as "the making of a false document, knowing it to be false, with the intention that it shall in any way be used or acted upon as genuine, to the prejudice of any one whether within Canada or not, or that some person should be induced by the belief that it is genuine, to do or refrain from doing anything, whether within Canada or not."

Sect. 2. What Is a False Document?

"A false document means (i) a document, the whole or some material part of which purports to be made by or on behalf of any person who did not make or authorize the making thereof, or which, though made by, or by the authority of, the person who purports to make it, is falsely dated as to time or place of making, where either is material, or

(ii) A document, the whole or some material part of which purports to be made by or on behalf of some person who did not in fact exist, or

(iii) A document which is made in the name of an existing person, either by that person or by his authority, with the fraudulent intention that the document should pass as being made by some person, real or fictitious, other than the person who makes or authorizes it." (Code S. 335 j.)

"Making a false document includes altering a genuine document in any material part, or making any material addition to it or adding to it any false date, attestation, seal, or other thing which is material, or making any material alteration in it, either by erasure, obliteration, removal, or otherwise." (Code, s. 466, s-s. 2.)

Sect. 3. Intent to Defraud

The motion of forgery, as given by Hawkins, does not so much consist in the counterfeiting of a man's hand and seal—for this may often be done innocently—but in the endeavoring to give an appearance of truth to a mere deceit and falsity, and either to impose that upon the world as the solemn act of another, which he is in no way privy to; or, at least, to make a man's own act appear to have been done at a time when it was not done, and by force of such falsity to give it an operation, which in truth and justice it ought not to have. (1 Hawk. c. 70, s. 2.)

In order to convict a person of a crime for having made a false document, the intent to defraud must be made to appear. R. v. Dunlop, 15 U.C.R. 118. But there is an old axiom which here applies with great force: "Every man is presumed to intend the natural consequence of his acts."

If a person without any authority affix the name of another to a negotiable instrument, such as a bill of exchange, put that into circulation, and obtain money thereby, he is presumed to intend the natural consequence of that act—the prejudice of another's right—for, in the event of his not being able to pay it at maturity, on the forgery being discovered, the person from whom he received the money must suffer; not the person whose name is forged, as I need scarcely stop to tell you. So, in the case of a successful presentation of a forged cheque, the bank and not the customer suffers the loss.

A fraudulent intent on the part of the forger has often been gravely questioned by counsel when defending persons who had forged the names of friends, fully relying upon their own ability to take up the bills or notes before maturity, but whose anticipations had failed; or who, "relying on the kindness of another (a near relation, for instance), had used his name on a bill without authority, trusting that such individual would pay it rather than there should be a criminal prosecution."

In the case of R. v. Beard, 8 C. & P. 143, B. was indicted for forging an acceptance on a bill of exchange in the name of Woodman. W. admitted that he had had money transactions with B. and had been connected with him as a partner in a hat manufactory, and that they had had many bill transactions, and had trusted each other largely, and that a mutual accommodation existed between them. In summing up the case before the jury, Coleridge, J., said: "We now come to W.'s statement that he has been for the last eight years in habits of great intimacy with the prisoner and in partnership with him. Now, I put the question whether, though he had not authorized the signing of his name on that particular bill, he had ever given the prisoner a general authority. If he had said to the prisoner, 'You may use my name whenever you like,' it would be idle to say that the acceptance was a forgery. It is not merely writing another's name, but writing it without authority and with intent to defraud. But I go further: I think that if a person had reasonable ground for believing, from the acts of the party that he had authority to accept and did in point of fact act on that, it would not be forgery."

But let me remind you that nothing short of bona fide belief that the defendant had authority and a fair ground for that belief, from the acts of the party whose name is used, is sufficient justification for defendant using another's name. Were it otherwise, all confidence between business men would be destroyed.

While on this subject of using ar-

other's name without his authority, I would suggest the propriety of an exercise of greater caution on the part of commercial men in allowing others to sign their names, even "per procuration." The defence of men charged with forgery has often succeded when it should not, by reason of the fact that the prosecutor had been in the habit of permitting this practice, upon which has been based the suggestion that the prisoner either had, or supposed he had, an authority in the particular instance in question. Vulgar adages frequently contain a vast amount of wisdom in few words:—"An ounce of prevention is better than a pound of cure." And this is specially so in regard to forgery.

Retailers Take Up Collection Problems

President Dominion Board R. M. A. Addressed Ottawa Retailers—To Try and Have Act Passed by Ontario Legislature—Talk of Increasing Rates.

THE executive officers of the Ottawa Branch of the Retail Merchants' Association of Canada, having learned that the president of the Dominion Board of the Association, Horace Chevrier, of Winnipeg, Man., was visiting the newly established head office at Ottawa, on his way to attend a meeting of the executive officers in Montreal, tendered Mr. Chevrier, the president, and the secretary, E. M. Trowern, a reception and supper at the Chateau Laurier, with the view of expressing their appreciation of the work that is being done by the association, as well as to give them a hearty welcome to the capital.

Their appreciation was further expressed by inviting the president and the secretary to address an open meeting of the Retail Merchants of the City of Ottawa, in the Russell House, on Monday evening, Sept. 18. The meeting was presided over by Henry Watters, president of the Ottawa branch, and was largely attended by the most prominent retail merchants of the cit.

Passed Resolution Re Small Debts

A resolution, which will be presented to the executive of the Ontario board of the association, was passed, calling upon them to take such action as may be necessary to have introduced into, and passed by, the Ontario Legislature, an Act simplifying the collection of small debts for the following reasons:—

"1st. Because this Act will enable us to collect accounts which are to-day considered too small to place in the hands of a solicitor.

"2nd. Because it will relieve us from the exploitation of so-called 'commercial adjusters' or 'collection agency companies,' and it will enable us to do our own collecting inexpensively and expeditiously.

"3rd. Because it will act as a deterrent to professional solicitors for credit, who so often solicit without any intention of paying, as they count on the fact that the account being small they cannot be made to pay it."

Suggested More Advertising

In the course of his address, Mr. Chevrier referred to the part advertising plays in the upbuilding of the retail business.

"The more advertising that appears in the journals of a city the better it is for the advertiser," he said, adding that the more competition there was in advertisement writing, the more "pep" and the more spirit and originality in the copy, would redound to the credit of the merchant who sought development by keen advertising.

Manitoba Act

Mr. Chevrier described the simpleness yet effectiveness of the act in vogue in Manitoba for the collection of small debts, whereby the cost of collecting a $5 debt would be but 50 cents, compared with the cost of collecting a like amount in Ontario, of from $6 to $7. A magistrate was appointed in each necessary district to receive complaints of merchants and to issue summonses. The merchant could use his own employes as process servers, thus saving a cost necessary in this province. He said that in 95 per cent. of the cases before the summons became returnable the debts were usually settled satisfactorily out of court.

Retailers Need Strong Organizations

He said the retailers must build an organization strong enough to make the provincial government take heed and put into force the amendment they demanded. He spoke of the important part played by the retail merchant in the citizenship of the country and claimed that a great part of Canada's advance had been due to the adventurous spirit of the retail merchant. He described the retail merchants as a class misunderstood, because they had never corrected the people's impression that they were exploiters of the public, leeches and feeders on the people's blood. To overcome this they would have to get together and organize and use the press as well as other means for telling the people what they really stand for. The only way to meet the manufacturer and wholesale merchant on common ground was organization.

Bankruptcy Act Important

In the course of his remarks, Mr. Chevrier said Canada would be face to face with a necessary era of credit after the war and that developments might be expected which the financial system of the country would not be ready to meet. He said it would be a case of giving and receiving credit.

He spoke of the importance of a bankruptcy act, and in touching upon the business war tax, declared that its drawing up had not been considered from the retail merchants' point of view.

A discussion followed Mr. Chevrier's remarks, in which E. M. Trowern, secretary of the Dominion Board of the Association, took part. It was urged that the membership fee be increased from six dollars now to ten dollars. It was also intimated that a big rally of the retail merchants would be held in the near future, to take the form of a dinner with speeches by retail merchants of country-wide prominence.

PREPARE FOR XMAS SHOPPING.

It would seem advisable to draw the attention of the retailer again to the fact that Xmas. is only about three months distant and in less than six weeks time people everywhere will be on the lookout for suitable presents for their friends and relations. The tendency in recent years has been to advocate early buying and in this way relieve the eleventh hour rush, which proves so tiring not only to the retailers' staff but also to the one making the purchases. Many a Christmas has been spoiled by trying to crowd too much shopping into the last day or two. Early buying avoids this and tends to greater satisfaction in every way. The selection of goods is larger, the attention of clerks more assured and confusion easily avoided.

Retailers who are planning their holiday campaign now are indeed acting wisely. There are any number of difficulties to overcome this year which are not usual. Supplies are hard to get and more than ever this year will the useful gift be asked for. The father will be wanting a new carving set, a new shaving outfit, a new pocket knife—the mother, a stove, some new enamelware or silver plated ware—the daughter, a sewing set or a manicure set—the boy a pocket knife or hockey supplies—the boy in khaki, a safety razor. In going over your stock, any number of useful gifts can be selected—it is not too early to do this now. You will benefit in more ways than one.

DUPONT KODAK CONTEST.

The Dupont Company, Wilmington, Del., is conducting a Kodak Contest in which 24 cash prizes from $15 for first, down to $2.50. The contest closes Dec 1. The company wants short snappy stories. Not over 600 words descriptive of some novel and practical experience with a Du Pont hand trap. Each story must be accompanied by three snapsshots. Complete details of the contest will be supplied free upon request.

EVENTS IN THE TRADE

Fire Losses

Westboro, Ont.—J. Stewart, hardware, has been burnt out.

Change of Address

J. E. Hayden & Co., Montreal, have changed their place of business from 30 St. Francois Xavier Street to 225 Lemoine Street.

Incorporations

The incorporation is announced of the Hamilton Brass, Ltd., the capital of the company to be $40,000; head office, Hamilton, Ont.

Obituary

W. E. Bradwin, traveller for Storey & Campbell, wholesale harness and findings, Vancouver, died on Sunday, September 17.

Business Notes

Montreal, Que.—Lionel L. Phillips & Co., metal, steel and machinery, have registered.

Deslile, Sask.—Pope & Given, hardware and implements, have incorporated.

Visits From Burglars

Burglars entered the store of the Blairmore Hardware Co., Blairmore, Alta., on Friday, September 15, and returned the following evening. While they did not secure any cash on the second occasion, they took large quantities of firearms, hunting knives and several hundred rounds of ammunition. Several other stores were visited.

Personal

S. W. Smith, manager Ontario division Brandram-Henderson, Toronto, visited the company's exhibit at the Western Fair, London, Ont.

Will Beatty, manager Beatty Bros., Fergus, Ont., attended the convention of American Institute of Metals, American Foundrymen's Association, at Cleveland, Ohio.

J. C. Pendray, of the British American Paint Company, was in Medicine Hat recently looking over the ground for the purpose of locating a branch factory.

H. Pringle, Saskatoon, representative of the G. F. Stephens Co., was in Winnipeg last week prior to leaving for Cobourg, Ont., which is his home.

L. C. Stephens, assistant secretary and purchasing agent for the G. F. Stephens Co., Winnipeg, has been seriously ill for the past two weeks, but his condition is now improving.

Frank Agnew, for many years with the James Robertson Co., Winnipeg, has joined the sales staff of Mackenzie Bros., Ltd., Winnipeg, and will cover Manitoba and North Saskatchewan.

Industrial Notes

At a meeting of the directors of the Standard Tire & Rubber Co., held in Guelph, the sale of the plant and also the lease was ratified, giving the Partridge Rubber Co. of Montreal possession of the plant. The Partridge Company are preparing to install machinery now in use in its Montreal factory.

Major McAvity Wounded

Major Percy D. McAvity, of McLean, Holt & Co., St. John, manufacturers of stoves and castings, was admitted to the stationery hospital at Boulogne on Sept. 17, suffering from gunshot wounds in the chest. Later reports by cable held out promise of his recovery. Major McAvity left St. John with the 26th Battalion as lieutenant and won promotion to the rank of company commander.

Business Changes

Miami, Man.—W. H. Campbell, hardware, has been succeeded by Campbell & Botting.

Mozart, Sask.—W. C. Barker, hardware, has been succeeded by T. Laxdal.

Ribstone, Alta.—R. J. Wilde, hardware, has been succeeded by A. P. Ruf.

Avonlea, Sask.—Monson Hardware Co. has been succeeded by Avonlea Hardware Co.

Lajord, Sask.—H. A. Hanson, hardware and implements, has discontinued.

J. Sommerville, Jr,. Dead.

John Sommerville, Jr., of Edmonton, passed on, after a lingering illness, at the home of his father last week .

After spending considerable time in California for the benefit of his health, where he also engaged in the real estate business and was president of the Hermosa Beach board of trade, he returned to Edmonton last April. The late Mr. Sommerville was 37 years of age, and went to Edmonton some fourteen years ago from Portland, Oregon, with his parents. For many years he was connected with the Sommeville hardware company.

PAINT AND GLASS CONVENTION

The salesmen of the Winnipeg Paint & Glass Co. met at their head office during the week of September 11 for their annual convention. Descriptive talks were given on their leading lines by the different department managers, and all matters affecting sales were thoroughly discussed. One item on their programme which proved of particular interest, was a sales competition, in which each traveller had an opportunity of demonstrating his ability. The judging was done by the travellers themselves, and close scores were recorded, the winner being Jas. M. Scroggie, representative of the Southern Saskatchewan territory. The company gave him as a prize a beautiful gold watch. During the week the men were entertained at the theatres and dinner parties, and a bowling game between the travellers and the inside staff was held, at which the travellers were easy winners.

AN EFFECTIVE DISPLAY

One of the most effective window displays seen in St. John recently is that shown in the King Street window of T. McAvity & Sons, for the purpose of drawing attention to their ability to supply everything in the hardware line required by the lumbermen, in anticipation of the winter logging season, which soon will open.

The window showed a representation of a logging and milling scene in the heart of the woods, with great faithfulness and great attention to detail. The background was provided by miniature spruce and cedar trees, and in the foreground was a logging stream sparkling along over a gravel bottom. On the banks of the stream was a miniature sawmill, operated by an overshot water wheel, and in which could be seen a stick of timber in the act of being converted into deals. In the rafting pond other logs floated, and on the runway the hoisting chain already had drawn up its load ready for the next shift on the saw.

The display was surrounded by samples of the various articles which form part of the equipment of the lumber camp, the loggers, the stream drivers and the lumber mills, and the whole made an attractive and impressive exhibit.

Trade Inquiries

The Department of Trade and Commerce has received the following inquiries relating to Canadian trade. Addresses may be secured from the Department, or from the Editor, Hardware and Metal, Toronto, Canada. Please quote reference number when requesting addresses.

1125. ***Wood-pulp board.**—A Bristol concern who are large buyers of wood-pulp board, to weigh in the size 40 inches by 45 inches about 180 sheets to the cwt., desires quotations for a contract of 100 to 150 tons per annum, delivered in lots of 10 tons per month.

1129. **Garden tool handles.**—A Sheffield firm wishes quotations from exporters in a position to supply the above. Specifications may be obtained from the Department of Trade and Commerce, Ottawa.

1131. **Manganese, manganiferous or iron ore.**—A Middlesborough firm makes inquiry as to possible supplies of the above.

1133. **Wire rods.**—A Halifax firm, now buying large quantities of the above from the United States, desires to be placed in communication with Canadian exporters.

1134. **Corundum.** — A Middlesborough firm makes inquiry as to the possibility of obtaining supplies of the above from Canada.

1137. **Wire nails, nuts and bolts, rails.**—A Sheffield firms asks for prices on consignments of not less than 50 tons of wire nails, 5 to 10,000 gross of bolts and nuts, and 100 tons of rails.

1138. **Box shooks.**—A South African firm is prepared to import from 500,000 to 600,000 box shooks annually and asks for quotations. Further particulars and specifications with the Department in Ottawa.

1140. **Rubber goods.**—A firm handling mining supplies only, asks for small sample and quotation on ribbed hose continuous lengths of 500 feet. Must be best quality. Small sample of the kind and quality wanted is on file at the Department of Trade and Commerce, Ottawa.

1141. **Conveyer rubber belts.**—A mining supply house asks for sample and prices on conveyer belts which must be made to carry rock in which there is a great amount of grit and other mechanical rubber goods.

1142. **Wire loops.**—Special wire loops for binding rubber hose are wanted by a mine supply house in Johannesburg. Send samples and prices. Sample of kind wanted on file with the Department of Trade and Commerce, Ottawa.

1143. **Broom handles.**—A broom manufacturing firm asks for samples and prices on 500 dozen lots of broom handles, 50 inches long by 1⅛ full size round. Sample requested.

1144. **Mining supplies.**—A Johannesburg firm are prepared to purchase for cash any line of mine supplies, not machinery. If not represented in South Africa must send sample with quotations.

1145. **Mining material and iron and steel.**—A Johannesburg firm of commission agents are prepared to take up agency of mining supply lines, not machinery. In iron and steel one member of the firm has had long Sheffield experience.

1146. **Cart and carriage, iron and steel, hardware.**—A Johannesburg firm of coach builders requests catalogues and price-lists on all cart and carriage hardware.

1148. **Cart and carriage woodenware.** — A Johannesburg firm of cart and carriage builders will purchase Canadian carriage woodenware, including three-ply woods and other carriage woods.

1149. **Motor accessories for body part only.**—A Johannesburg firm manufacturing motor bodies and hoods would like to hear from suppliers of such goods.

1151. **Horseshoes.**—A Johannesburg firm asks for samples of Canadian-made horseshoes and prices.

1152. **Motor cars.**—A Johannesburg firm are prepared to handle for the Transvaal a Canadian-made motor car. Must be different from cheap makes on the market. Prepared to pay f.o.b. Canadian ports about $900.

1154. **Commodities wanted for South American market.**—A large and influential export firm in Birmingham wishes to hear from Canadian firms in a position to export the following commodities to South America. Catalogues should be forwarded if possible: Agricultural implements, axe and matchets and tools, general hammers, etc., buttons, bolts and nuts, brushes and brooms, enamelware, fish, lanterns, leather, metal roofing, mattresses, metallic ceilings and walls, nails, paper, paint, ropes and twines, screws, steamfittings, tube, wire and wire fencing, woodenware handles ,etc., glue.

1155. **Machinery and tools.**—A Birmingham firm would like to hear from manufacturers of drilling machines, milling cutters and reamers, chucks, twist drills, vices, hack saws, and machines, pulleys and mechanics' tools.

1157. ***Coat hangers,**—A Birmingham firm is open to purchase coat hangers, samples of which are being forwarded to the Department of Trade and Commerce, Ottawa.

*Included in the list of articles the importation of which into the United Kingdom is prohibited except under license from the Board of Trade, London. For further information apply to the Department of Trade and Commerce, Ottawa.

LIFE INSURANCE A BIG ASSET

(From *American Artisan*).

A certain hardware traveling salesman died recently. He had been earning a large salary, but had spent his money as fast as he carned it. His family occupied a high-priced apartment nicely furnished. He owned an automobile and his family, consisting of his wife and two children, had almost every comfort that could be imagined. He took cold one day and in two weeks he was dead and buried.

When it came to settle up his estate it was found that after all debts had been cleared away, less than $1,000 was left to the widow, for he carried no life insurance.

This is by no means a unique case, for many men think that they deserve credit if they manage to live just within their income, and many others look upon life insurance as a proposition that may be taken up later on but for which at the present time they have no money to spare.

The carrying of life insurance is a duty which every married man owes to himself and his family whether he be a salary earner or owner of a business. If he is a traveling salesman or occupies a position in an office, shop, or store, the regular family income will cease when he dies and unless he has made proper provision—in the form of life insurance—for a steady source of income after his death his family will in practically every case suffer want.

The owner of a retail hardware store derives his income partly from the salary which he receives as manager of the business and partly from the net profits of the business. If he is a partner the first portion of this income will cease when he dies, and in many instances the surviving partner will insist upon having someone buy the interest of the deceased, in which case the widow will, of course, receive a sum of money representing the interest of her late husband in the business, but this money in most instances will not yield the same returns when invested simply in loans as it did when it was used in the business.

No matter from what angle you look at it, it is first class business policy for any man—whether he be an employee or sole or part owner of a business—to carry a liberal amount of life insurance.

THE RECRUITING PROBLEM

(From *The Financial Post*).

At various times during the past two years we have dealt with the rotten lack of system in recruiting, for which our Ministers of Militia, Trade and Labor were to blame. We urged the appointment of a Director-General of Recruiting. On May 27th last we said:—

Director of Recruiting Needed

The recruiting question continues to be a serious one in many industrial establishments. Many men whose services are of the greatest value to Canada and the Empire are volunteering from a sense of duty for service overseas, while thousands of untrained young men, who could be spared, are not responding to the calls of recruiting agents.

There are several classes of employment which are luxuries from which hundreds of men could be released. There are others which are not absolutely essential to the conduct of business. These classes should be tabulated and recruits sought among them.

In England the Government permitted the withdrawal from the army of such men as were necessary for the industries, and is now replacing them by those who can be spared.

Condemnation of the Ministers of Labor and Militia is not confined to Eastern Canada for not getting together on the question, but we are hearing it from the West. *The Regina Leader*, in quoting from an article in *The Financial Post*, expresses its own opinion thus:—

"The whole country is becoming aroused over the question of recruiting, and with particular reference to the absence of any leadership from Ottawa, and the failure of the militia authorities to provide any system. People are only now beginning to awaken to the danger to the country if the haphazard, happy-go-luck way of enlisting men is to continue. The demand for a national registration of the manhood of the Dominion is increasing, while talk of conscription is heard from many places."

What is needed is a Director-General of Recruiting, a good executive officer, who will adopt a methodical, businesslike procedure.

The Government has now decided to act on our suggestion. They will appoint a "Director-General of National Service," and Sir Thomas Tait will take the place. Sir Thomas ought to be an ideal man. He has had charge of recruiting at Montreal. He began as stenographer to Sir William Van Horne, president, Canadian Pacific, and worked his way up to a general superintendent; when he was asked to take charge of, organize and systematize the Australian Government railways.

If party politics would let Sir Robert Borden select his Cabinet Ministers—as *The Post* has advocated—with the same good judgment as he has shown in this and several other instances since the war began, the country would support him in spite of the various combinations that are now being formed against him, within and without his party. There are a number of great executives in Canada in the Liberal as well as the Conservative party, who would sacrifice their own comfort and affairs to join his Cabinet to help him at this time.

NATIONAL ECONOMY

(Monthly Commercial Letter of the Canadian Bank of Commerce).

Even although their patriotism be undoubted, nevertheless many Canadians are aiding the enemy by thoughtlessly frittering away the profits and earnings due to a prosperity which may be suddenly arrested by the advent of peace. The Trade Returns continue to furnish evidence of the importation of many unnecessary articles and, to the extent that this is the case, our financial ability to resist the enemy is lessened. The words of Sir Charles Addis, in his address on "The Means of War Finance" appy to Canada as much as to the United Kingdom, when he says that people "do not understand that by the manner of their personal expenditure they may be determining whether the horrors of the conflict are to be prolonged or the blessings of peace anticipated. There does not appear to be as yet any general or adequate recognition of the special responsibility for the right use of war earnings attaching to those whose prosperity depends upon the continued sacrifice of life and limb by their fellow-countrymen in the field. It is surely a small thing to ask of those who are restrained from joining the fighting line by the disabilities of age, or infirmity, or sex, to make some sacrifice for those who are fighting their battles for them. Sacrifice! let us call it what it is—a privilege, perhaps the only privilege left to us."

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

MARKETS AT A GLANCE

The past week has not been without the usual heavy budget of price changes, all in an upward direction. Among the many lines on which prices have advanced are white lead in oil, stoves, heaters, furnaces, clay and rock picks, mattocks, pipe fittings, scythe snaths, hammers, wrenches, sledges, crow bars, screen wire cloth, black sheets, tinned wire, cotton rope, sash cord, alarm clocks, cheap watches. The steel market has entered upon another period of activity. Prices are changing with alarming rapidity and the effect upon the hardware trade will be widespread. Mills are unable to cope with the demand for steel, despite their improved facilities and larger output. The demand for steel is as insistent as ever, and the outlook at present is for an even greater demand rather than otherwise. Boiler plates are very scarce, and steel rails are practically unobtainable inside of twelve months.

Ready-mixed paints are firm at the recent advanced prices. Manufacturers are experiencing great difficulty in securing supplies of raw materials. Some supplies are practically unobtainable, while others are obtainable only at tremendously high prices. The ingot metals are practically unchanged locally, and are in fair demand. The allied Governments have placed orders in the United States for 200,000 tons of copper for delivery during the first six months of next year. It is the largest order ever placed in the history of the industry. The average price at which the contract was placed is said to have been 26c. The Canadian Government has also purchased heavily of copper, lead and spelter for the new arsenal at Lindsay. Business continues good. There is a great scarcity of many lines of shelf hardware, more particularly in steel goods.

MONTREAL MARKETS

MONTREAL, Sept. 27.—Steel products have again shown a pronounced tendency to increase in price. Builders' hardware has gone up from 5 to 7½ or 10 per cent. in some cases, and all lines are concerned. Brass rods and sheets are up a cent. a pound, affecting much builders' supply material, such as door fittings. Tin is very firm, and so are the wire products, so that tinned iron wire shows an increase of 10 per cent. Both clay and rock picks are advanced this week. Crowbars are up ½c per lb. Great scarcity of all wire products, notably hay wire, and fence wires is mentioned on the markets, and such articles as steel drills and files of all kinds are very hard to get. Stocks of these now, as compared with stock of a few years ago, are surprisingly small, and yet hardly less valuable as they stand than were the bigger stocks of earlier dates.

Gate hooks and eyes are scarce and in demand. Staples in many sizes are missing from many stocks, and manufacturers may be a long time replacing them.

Lead is in a firm market, and in the hardware trade generally the increase in the prices of paints is now being freely noted and commented upon, though with the healthy business feeling that the advance is not a vexingly serious one, and demand continues unabated for the season, which is considered good.

Scarcity of Steel

The firmness of the iron and steel market remains amongst the most pronounced features of the metal situation generally, and this characteristic reflects itself sharply in certain particular lines of steel goods this week, and tends to make many articles which have not actually changed in price very difficult to obtain in large quantities. Wire goods are all in this position, and wire is increased in price, having been in a firming market for months. In certain isolated cases wire was obtainable at lower prices than present quotations, but stocks have dwindled, and with the manufacturers in straits to get skilled help as well as to get materials, the prices asked for wire by the wholesalers have gone from firm to firmer, and may increase again the opinion of men in touch with the markets and the manufacturers.

Huge Allied Order

With a very marked firmness apparent, and every indication that increases in price might be asked any day, copper remained steady at the prices of last week's report, 31½c to 32c. The huge allied order for this metal just placed must undoubtedly prove a considerable factor in firming the market up. Copper is one commodity which is indisputably in an absolutely controlled market, the bulk of production being in the United States at present, and the whole of the refining industry. When Canada begins to refine as well as to mine copper the market may come into different conditions as regards control and influence affecting prices. Meantime New York and the American mine magnates have the last word as regards copper, and their last word so far has been for a firmer market.

Lead Very Strong

In an unchanged but very strong market, lead was being quoted in Montreal at $9.50 to $9.75. Even those in closest possible touch with the market trend and tendencies were cautious and noncommittal as to the possibilities of the future in regard to lead. Inquiries for large deliveries in the fairly near future were being made, and mighty close figuring was being done in the meeting of these, though as was admitted by some experts, the whole business of buying and selling metals nowadays is almost a guessing game with the best of the bargain to the best guesser.

Sheet Zinc Easier

As a welcome relief to the general firmness of the metal markets, but also as an indication of the uncertainty of affairs generally in connection with those markets, is the information that sheet zinc is a little easier priced at 26c to 27c as compared with 30c to 30½c of last week. Sheet zinc had been scarce and supplies apparently out of sight, but things loosened up a bit later on, and prices accordingly droppel to the figure quoted at which they steadied.

Solder Also Easier

An easier tendency in spelter was also due to better supply, with quotations at 16c to 16½c lb. There was a shading of a cent downwards on tinsmiths' solder, which was quoted at 29c, and on wiping solder, price of which was put at 26c. Last week's prices were 30c and 27c.

Tin Much Stronger

Unchanged in price from last week, tin is nevertheless in firm demand and in much stronger market. Prices quoted are from 45c to 45½c, and inquiry was considerable.

Antimony Quiet

Still in slackening demand, antimony is quoted at 15c per lb., and in not very strong market.

Aluminum Steady

At 68c per lb., and in steady but not unusual demand, aluminum presented no particular feature on the market this week.

Builders' Hardware Up

Delayed a little, but none the less certainly as expected, and as predicted in HARDWARE AND METAL, came the increase in prices of practically all lines of builders' hardware. Jobbers have been on the jump amending price lists of a hundred-and-one articles in more or less every-day demand in these lines. Hammers, planes, augers, auger bits, chisels, saws, all Peterboro goods, everything in builders' hardware is up from 5 to 10 per cent. The Canadian increase is not quite so high as that across the border; at any rate, as far as Montreal is concerned for the present. Rim locks are 7½ per cent. up. Door knobs, porcelain and metal, are 10 per cent. up, and there is an average increase of from 7½ to 10 per cent. on all lines, both brass and steel.

A matter which affects many articles of builders' hardware in the line of interior and door fittings, is the fact that on Wednesday morning rod and sheet brass went up by 1c a pound. This will affect the price of push-plates and all rod constructed brassware.

Clay and Rock Picks Up

In line with all steel products, clay and rock picks have been quoted higher in price this week. The new prices quoted are about 5 per cent. higher on all weights from 5 to 8 lbs., and though the 9-lb. pick is not mentioned specifically in the alteration of the list, a 5 per cent. increase may be allowed for in that line also. Following are prices on clay and rock picks as at present:—

Clay picks (per doz.)—5 lbs., $5.50; 5½ lbs., $5.60; 6 lbs., $5.80; 6½ lbs., $5.95 7 lbs., $6.05; 7½ lbs., $6.25; 8 lbs., $6.45. Rock Picks (per doz.)—5 lbs., $6.55; 6 lbs., $6.75; 7 lbs., $6.85; 8 lbs., $7.05.

Crowbars Higher Priced

Steel crowbars have been increased in price in line with rock and clay picks and other steelware. The new prices quoted are half a cent per pound higher than previously. They are now $4.75 per 100 lbs., or 4½c to 4¾c per lb.

Black Sheets Shaded Up

A slight shading of prices in black sheets of 14 and 16-gauge was made this week. For the 14-gauge $5.10 was being asked instead of $5.05, and for the 16-gauge $5.15 instead of $5.10. This was due to readjustments as regards supplies, which are scarce. Other prices for black sheets remain as in current quotations.

Tinned Wire Up in Price

Tin is in a very firm market indeed, and wire goods of all kinds are away up as compared to previous experience in the hardware trade. It need hardly be wondered, therefore, that tinned wire should be increased in price this week by 10 per cent., adding in all probability that percentage of increase to many lines manufactured from tinned iron wire, such as toasters and bird cages, soap and sponge racks, domestic wire baskets for culinary and other purposes, etc. The increase is a straight through 10 per cent. raise, applying to all sizes of tinned iron wire.

Cotton Rope and Twine Firm

Prices on cotton rope are up by about 2c, ranging from 29c for the ¼-inch size and upwards in proportion; 30c per lb. for the 3-16th size, and so on. Sash cords are increased by about 3c, No. 6 being quoted at 38c, No. 7 at 37c, Nos. 8-12 at 36½c (formerly 33½c). All lines of ropes are firm at present prices quoted in Montreal being on an average at the figures quoted in current quotations, or a shade lower in some cases for some lines. Jute fibre products are firmer priced owing to difficulty of obtaining the raw material from India.

Asbestos in Demand

Asbestos products are firmer and higher priced than in previous experience of the trade, and the demand at present for asbestos manufactured goods is unprecedented in the whole history of the trade in this most especially Canadian product. Although the labor trouble at the mines in the Eastern Townships is now satisfactorily settled, production does not entirely keep pace with demand for asbestos, which is being used more than ever for naval and military purposes. While many staple lines in asbestos products are not increased in price, sheet packings are higher; wick, rope, asbestos paper, and millboard are all considerably more costly now than they were some months ago.

Alarm Clocks Scarce

In general lines of hardware scarcity is noticed in regard to certain well known alarm clocks, which are hard to obtain in big or small sizes. Washing machines (water-power) are also difficult to obtain in any considerable supply.

TORONTO MARKETS

TORONTO, Sept. 27.—The upward flight of prices continues, and a number of important price changes have again taken place. Among the many products which have been advanced in price are stoves, ranges, heaters, furnaces, wire cloth, clap picks, mattocks, sledge hammers, sweat pads, cow bells, crowbars, wrenches. An advance of 50c in the price of white lead in oil has also taken place. Details regarding this advance are given in the weekly paint market report.

Business continues brisk, despite the high cost of goods. The fall trade has opened up well. Country trade is splendid. Collections are quite satisfactory.

The advent of cooler weather has greatly stimulated the demand for fall hardware lines, stoves and stove accessories.

Third Advance on Stoves.

An advance of 5 per cent. has been announced by a number of stove manufacturers on stoves, ranges, heaters, and furnaces.

This make the third advance of 5% each, since January 1, 1916, and Furnaces take a second advance of 5% during the same period.

Manufacturers claim that the prices in the stove line have not yet advanced in proportion to the increased cost of both labor and material over 1915 prices; this, they state, can be accounted for by the fact that nearly all our foundries have been working on 1915 contracts for materials and reserve supplies.

The munitions work has drawn labor from the stove foundries very largely, so that the manufacturers are behind in their promised deliveries for Fall. Labor for the moulding shops particularly is not available. The demand for stove mounters is also in excess of the supply.

Most dealers have had the opportunity to order ahead of the recent advances, and orders are placed very largely at prices quoted before August 1, for the manufacturers announced the first two advances well before they were made.

Unless some changes comes about in the cost of raw materials, which now show advances from 100 to 300 per cent. in some articles, it is difficult to tell what to expect in 1917. That the price of labor cannot change under present conditions, needs no explanation.

Wire Cloth Higher.

An advance of 10c per 100 sq. feet has been made in black wire cloth. The new price for 100 foot rolls is $2.35c, and 50 foot rolls $2.40c per 100 sq. ft .

Clay Picks Advance.

New and higher prices have been issued on rock and clay picks representing an advance ranging from 50c to 75c per doz. The new prices on clay picks are as follows: 5 to 6lbs., $5.75c; 6 to 7lbs., $6.25c; 7 to 8lbs., $6.50c, and 8lbs., $6.50c per doz. Rock picks 7lbs. are quoted at $6.75c, and 8lbs. at $7 per doz. Mattocks have advanced 50c per doz., to $6.25c per doz.

Sledge Hammers Up.

Makers of sledge hammers have raised their prices, ranging from 25c to 75c per 100lbs. The following are the new prices: Canada, 5lbs. and over, $10.75c; masons, 5lbs. and over, $12.25c, and napping hammers up to 2lbs., $13.75c per 100lbs.

Miscellaneous Items.

A number of smaller hardware lines have advanced, and include the following: Sweat pads up 5 per cent.; Cow bells, 10 per cent. advance; crowbars have advanced to 5¼c per lb.

Advances in Wrenches.

An advance of 5 per cent. has been made on "Stillson" wrenches, the new discount being 57½ per cent.; parts 55 per cent.

Good Demand for Tin.

The price of tin remains unchanged, and there is a good demand at present levels. The price at present looks cheap in comparison with other metals. The local quotation is 44c per lb.

Lead Strong.

The lead market is still strong, and gained further strength during the week. Prices in New York have firmed up considerably for early deliveries. Canada has been a big buyer of pig lead during for the past few weeks. The demand is good. Price locally is 9¼c.

Copper Quiet.

Copper locally is quiet, and the demand for ingot copper is surprisingly light. Sales of large quantities of brass turnings, etc., have affected the demand for copper. Price locally remains at 30c, and is considered low when compared with prices in American centres.

Spelter Buyers Active.

There is a tendency on the part of buyers of spelter to cover for future requirements. The price locally is unchanged, and remains at 12c.

Antimony Unchanged.

Antimony is unchanged and featureless. A report from New York states that there is an over-supply of the metal in America. The price locally remains at 18c. Aluminum remains unchanged at 68c. The price on this metal for a year prior to the war averaged about 22c.

Iron and Steel.

The demand for steel is as insistent as ever. Conditions to-day are altogether different from those expected, and predicted by some a few months ago. Some dealers expected that the great movement in steel would have receded by this time. Such has not been the case, however, and the great movement has started a fresh lap. Many authorities now feel that the war will last throughout next year, and that as long as the war lasts the unprecedented demand for steel will continue. Not only is there a heavy demand for war purposes, but domestic trade in the United States has shown a wonderful improvement of late. Many authorities express the view that the high prices of steel will continue long after the close of the war.

There is a good demand for bar iron. The price locally is $3.25c. base.

Wire Products Firm.

All wire products remain firm. A further advance of 10c per keg will probably take place in the price of wire nails. Wire nails are quoted at $3.80c base; cut nails at $3.40c base.

Some lines of wire fence are being sold by jobbers at lower prices than those quoted by manufacturers.

Pig Iron Strong.

The pig iron market is very strong, and there is some talk locally of an advance in prices. The demand for basic iron continues very heavy, while there has been better enquiry for foundry grades. The pig iron market in the States is stronger, and prices have advanced on some grades. Bessemer is now quoted at $22.20c, gray forge $18.95c, Pittsburg and Basic Valley Furnace, $18.25c per ton. Hamilton No. 1 is unchanged at $24.00c, and Victoria No. 1 at $25.00c.

Old Materials.

The market for old materials is holding fairly steady, and business is brisk. Scrap copper has advanced, but otherwise quotations are unchanged. The advance in copper is equal to 1½c per lb., which brings crucible copper up to 22½c, heavy copper 22c, and copper wire 22½c per lb. Lead is a shade higher, heavy lead being quoted at $6.25c and tea lead $5.25c per lb.

Black Sheets Firmer.

Black sheets have advanced 3c in the United States, and there is a possibility of still higher prices, as an advance of $3.00 a ton is looked for in sheet bars. Blue annealed sheets continue in good demand at unchanged prices. The galvanized sheet market is stronger on account of the increased strength of spelter and high cost of sheets, quotations, however, are unchanged. Prices on sheets are given in the current market quotations.

Machine Tools.

The machine tool market continues active, business being confined almost entirely to large-swing lathes for munition plants. Owing to the demand for this class of equipment both in Canada and the States, deliveries are getting more backward. The market for smaller tools, such as milling machines and tool maker's lathes is quiet, as they are very hard to get.

LONDON MARKETS

LONDON, Ont., Sept. 26.—A number of further important price changes have gone into effect this week. Prices on practically all hardware lines are firm, and further advances are expected. Jobbers are soliciting orders for spring delivery. Cutlery for the Christmas trade is very scarce. Collections are good. Business here and in the surrounding districts is excellent for this season, despite the high prices asked for goods.

Hammers and Wrenches Up

Whitman & Barnes hammers, wrenches and sledges have advanced from 10 to 20 per cent.

Pipe Fittings Higher

An advance of 10 per cent. has taken place in pipe fittings. New discounts are as follows:—Bushings, 55 per cent.; unions, 55 per cent.; plugs, 50 per cent.; nipples, 65 per cent. Class B and C remain unchanged at 20 per cent.

Post Hole Augers Up

A new price has been issued on Irvan post hole augers as follows:—8 in., $18.50 doz.; 9 in., $19.70 doz.; 10 in., $23.05 doz.

Snaths Advanced

The price of snaths has advanced, and quotations for spring booking are as follows:—Patent 00, $12.50 doz. list; 1, $12; 2, $11.50; 3, $10.50. Ring and wedge—$10.50 doz. list. Brush—$13 doz. list.

The discount off above prices is 20 per cent.

It will be noted that list prices on some types of snaths are higher than last year. The discount last year was 30 per cent.

Picks and Mattocks Up

An advance has taken place on clay picks and mattocks. Prices are as follows:—Clay picks, 5-6 lbs., $5.75 doz.; 6 to 7 lb., $6.25 doz.; mattocks, $6.25 doz.; grub hoes, $5.25 doz.

Crowbars Up

Crowbars have fallen in line, and the new and advanced price is 5¼c lb.

White Lead Up 50c

Paint manufacturers have announced an advance of 50c per 100 lbs. in the price of white lead in oil. Quotations are now $13.95 per 100 lbs. in ton lots; $13.75 per 100 lbs. in less than ton lots. The demand at present is not heavy. A special article elsewhere in this issue deals with the white lead situation.

Nails Very Firm

All wire products are firm and unchanged. Nails remain at $3.80 base for wire, and $3.40 base for cut. An advance of at least 10c is expected shortly on wire nails. Fence wire is quoted per 100 lbs. as follows:—Barb, $4.25; No. 9 plain galv., $3.90; No. 12, $4.05; No. 13, $4.15; No. 9 coil spring, $3.95; No. 10 O. and A., $4.41; No. 11, $4.46; No. 12, $4.55.

Linseed Oil Unchanged

There is only a fair demand for linseed oil. Quotations are unchanged as follows:—1 to 2 bbls., raw, 83c per gal.; boiled, 86c per gal.; 3 to 5 bbls., raw 82c per gal., boiled 85c per gal.; 6 to 9 bbls., raw 81c per gal., boiled 84c per gal.

Turpentine remains at 71c per Imperial gallon in single barrel lots; 70c in 2 to 4-barrel lots; 78c in 5-gal. lots.

Improved Glass Demand

There is a fairly good movement in glass. The discounts are as follows:—Single diamond, 20 per cent.; double diamond, 20 per cent.; cut lights, 50-5 per cent. Putty remains unchanged at the following prices:—

Standard 100-lb. drums, $3 per 100 lbs.; standard, 25-lb. drums, $3.10 per 100 lbs.; pure, 100-lb. drums, $3.70 per 100 lbs.; pure, 25-lb. drums, $3.80 per 100 lbs.

Wire Cloth Higher

Black wire cloth has advanced 10c per 100 s. ft. The new price for 100-ft. rolls is $2.35; 50-ft. rolls, $2.40 per 100 sq. ft.

WINNIPEG MARKETS

WINNIPEG, Sept. 28.—Generally speaking, the markets for the past week have remained steady, and no great changes have taken place in wire and steel products, such as barb and galvanized wire or galvanized sheets. However, revisions in various lines of builders' hardware have gone into effect, due to the recent advances in steel, and this week new quotations are being made on light and heavy tee and strap hinges and plated butts. Sash cords has also advanced, and quotations on harvest tools for spring delivery have been made.

Harvest Tools 40 Per Cent.

Business being solicited for spring on harvest tools is on the basis of the present selling price, viz., 40 per cent. discount from list. Now would seem to be a good time for merchants to cover for their next year's requirements, as no guarantee is held out that this discount will hold throughout the season.

Dollar Watches Up.

An advance of approximately 20 per cent. in the price of watches has practically eliminated the dollar watch from the market at the present time. New quotations on Ingersoll lines follow—Ingersoll Watches—Maple Leaf, each .90c; Climax, $1.10c; Winner, each $1.80c; Reliance, each $2.55c.

Scythes and Grass Hooks Up.

Another advance is recorded in the price of scythes and grass hooks, new quotations on scythes being about 50c per doz higher than prevailed last season. Orders for spring are being on the following basis:—Grass hooks, $1.95c per doz; grass scythes, $8,75c to $10.75c per doz.; bush scythes, $9.50c per doz.

The latest quotation on hinges are given below:Heavy tee, 4-in., $1.75c per doz. prs.; 6-in., $2.50c; 8-in., $2.85s; 10-in., $5.80c. Heavy strap, 4-in., $2.10c per doz. prs.; 6-in., $2.80c; 8-in., $3.75c; 10-in., $6.70c. Light tee, 3-in., 70c. per doz. prs.; 4-in., 75c; 6-in., $1.05c; 8-in., $1.25c. Light strap, 3-in., 70c per doz, prs; 4in., 85c.; 6-in., $1.20c; 8-in., $1.75c.

The light tee and strap hinges are based on a discount of 30 per cent.

Plated Butts Higher.

Plated butts No. 241 in "A," "F," and "D 2" finishes are being quoted on the following basis: 2½ x 2½in., 24c per pr.; 3 x 3in., 25c; 3½ x 3½in., 25c; 4 x 4in., 31c.

Sash Cord Advanced.

The advance in sash cord as noted below is rather a sharp one, to-day's prices being 3 cents per pound higher than previously quoted. The recent advances in cotton rope have undoubtedly influenced sash cord, and other lines on which changes may take place are chalk and mason's lines and clothes lines. To-day's prices for these lines would seem good buying. The new prices on sash cord are as follows: No. 7, 41c per lb.; No. 8, 40c; No. 9, 40c; No. 10, 40c.

Builders' Hardware Up.

Various lines of builders' hardware are advancing in price, and everything

"DOCTOR" WILSON.

The Drastic "Operation" of President W ilson to Prevent the Threatened Strike of Railroad Employees.

points to a general advance all along the line for the spring trade. Two more lines which are affected this week are: Common rim and mortise door knobs, which now sell to the retailer at $1.45c per doz., and Caldwell sash balances, which are being quoted at a discount of 25 per cent.

Safety hasps, hasps and staples, screen door hinges in pairs and sets and cellar window bolts have all come under revision, and new prices being made are at an advanced figure.

Business Good.

Business continues excellent, and records now point ttto a splendid month's business. All seasonable lines are in demand, and this applies particularly to stoves on which the trade is exceptionally brisk. Jobbers are at present experiencing some fear that stocks they have provided will not be ample, and further supplies are almost unavailable. New stocks, which must be brought in, will show decided advances in price also, ranging from 10 per cent. to 25 per cent., so it would seem that now is the time to have stocks sufficient for the year forwarded.

—Racey in Montreal Star.

HARDWARE LETTER BOX

Lightning Rods

In answering an inquiry for names of manufacturers of lightning rods from J. E. Scriven & Sons, Tilbury, we inadvertently omitted the name of the B. Greening Wire Co., Hamilton, Ont., who have been manufacturers of lightning rods for many years.—Ed.

Galvanum Paint

Metallic Roofing Co., Toronto.—Please advise where we can procure galvanum paint.

Galvanum paint is made by Goheen Mfg. Co., Canton, Ohio, and is sold in Toronto by Sanderson, Pearcy & Co.—Ed.

NEW AUTO ACCESSORIES

In the way of automobile fittings, the Unique Findings & Supply Co., Providence, R. I., have placed on the market a contrivance for ventilating cars. It may be fastened to doors opening either from front to rear or vice versa. The "Fore-Door Ventilating Rods" come in pairs. They simply hold the fore-doors slightly open but the difference made in ventilation is said to be decidedly advantageous. They come in bronze nickel plated, malleable iron nickel plated or malleable iron black and nickel.

Another accessory offered by this firm is a combination crank holder and number bracket for Ford cars. It claims to hold the crank handle in an upright position protecting it from road obstructions and mud and may be attached by the same nuts that hold the front spring clip. T[illegible]

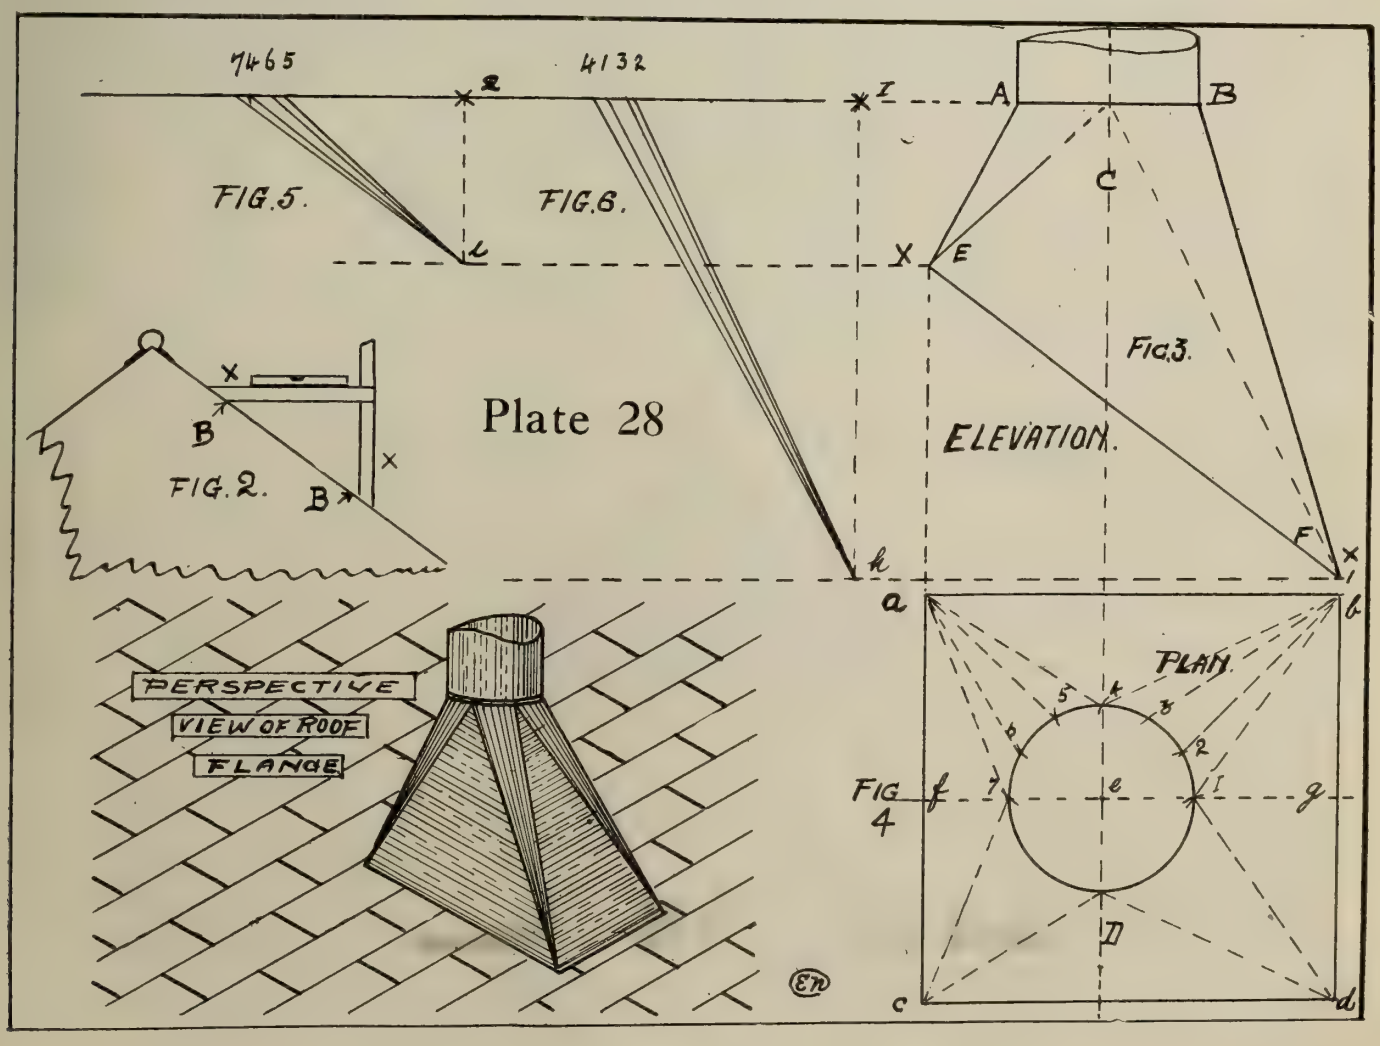
The above window display will furnish some splendid ideas for the window trimmer when arranging a Fall window.

PRACTICAL SHEET-METAL WORK

THREE PIECE ELBOW WITH GUSSET OR GORE PIECE.

BY THOMAS STANFIELD

SOME time ago we showed how to develop pattern for a register box, or a round to square. In this issue we are about to show a pattern which is in many ways a similar kind of a pattern except that the base is not straight, but rather at an angle as shown in perspective drawing, Fig. 1. Such are known as tapering roof flanges for inclined roof.



The first thing to do is to determine the pitch of the roof. If the roof is an old one, or already built, and there is no plan showing the pitch, a very easy way is shown how to get the proper pitch as seen in Fig. 2.

Place two pieces of lumber 1 in. x 2 and long enough to manipulate as shown X.X. Then by using the square and level in the way described, the pitch is determined at B.B., placing the level on horizontal piece, then B.B. will give the correct bevel required.

Now to proceed with the development of pattern, assuming line X. & XI. in Fig. 3 to be the slant which the flange is to have so as to fit the roof, and A. B. the diameter and position of pipe, erect a vertical line C.D., which must be centre of pipe. Next draw the two lines down from A. B. to X. & XI. Having done so, erect vertical slanted dotted lines from XI. and X. to centre of solid line A. B. We have now got a true elevation plan of the whole flange. We will now proceed to develop Fig. 4, by forming a square a.b.c.d. being formed by extending downward from E.F. in Fig. 3, and squaring the results as shown in Fig. 4, then intersect this square in centre horizontally as shown at f.g. resulting in getting the centre shown at e., from this centre draw a circle which will be the exact diameter of the pipe, and at the same time establishing the position of pipe in the flange.

Next space off as shown in 1, 2, 3, 4, 5, 6, 7, all of which must be perfectly equal, having done so, draw the dotted lines as shown a4. a5. a6. a7., also b4. b3. b2. b1., thus ending development of Fig. 4.

(Continued on Page 43).

WHAT OTHER PAPERS SAY

A BUNCH OF ABSURDITIES

(From *The Ironmonger*—England).

The Board of Trade has published another Schedule of Rulings and Decisions arrived at by the Department of Import Restrictions. The following articles, among others, are prohibited:—

Bathroom accessories of metal; belt-hooks (steel) for binding machinery belting; brass hose couplings; brass nails; brass oil pumps; broom handles; clothes-line reels in metal cases; collapsible metals cups; cyclometers; ear-markers, tin; electric switches; hatchets; iron nails with all-brass heads; ignition wheels for automatic lighters; machines for packing powders; burners and tools for stoves of Primus type; punched steel rivets; screw hooks for coat-hangers; steam traps; trouser-presses.

The importation of the following is not prohibited:—

Battery cells (complete), or electric batteries; cement for leather belting; enamelled teaspoons; envelope-sealing machines; gut for stringing tennis rackets; iron nails with a covering of brass on the head; machine for spraying limewash; mathematical instruments.

An examination of the foregoing confirms our our opinion that since Sir Guy Granet left the Department its decisions are made purely arbitrarily and without any logic or considered policy. The eccentricities in this list are so pronounced that they can only be accounted for by ignorance. It would be reasonable to suppose that the Department was conducted on one of three principles:—

To prohibit the importation of things we can make at home.

To prohibit those things we can do without for the time being.

To prohibit the things that take up a lot of ship-room.

If all these circumstances are considered every time, the decisions are still illogical and contradictory. Why let in bulky spraying-machines, of which there are half-a-dozen makers in England, and exclude machines for packing powders, which are much more difficult to buy here? Where is the sense of letting in gut for stringing tennis rackets and machines for sealing envelopes, and, in the fact of the official warning about coal, keeping out parts of a stove that is badly wanted in camps and trenches? What sort of mind is at work that differentiates between a metal device for fastening belting and cement for the same purpose? The pick of this bunch of absurdities, however, lies in the following:—

Iron nails with a covering of brass on the head—Not prohibited.

Iron nails with all-brass heads—Prohibited.

The Solomon at Carlisle Place who achieved this nice difference between picture nails should consult the Book of Proverbs, for nowhere else is writ so large the only epithet appropriate to one responsible for such a decision.

COMBINATIONS IN FOREIGN TRADE

(From *Journal of Commerce*, N. Y.)

So deeply has populism entered into the mind of politicians that combinations to facilitate trade in foreign countries are regarded with the utmost suspicion, and unanimous consent could not be had in Congress for a measure permitting manufacturers to combine to maintain selling agencies, and in other ways reduce the cost of doing an export business. This is evidence of the extent to which human action is the result of prejudice or sentiment rather than of intelligence and reason.

The popular uprising against trade combinations was due to their power of suppressing competition and increasing prices. Thirty years ago Congress concluded that competition could not be depended on between railways, and therefore established a regulative commission, somewhat inconsistently, however, trying also to prevent combinations; and in the original Sherman law it undertook to enforce competition among industrials. We now have a Trade Commission to supplement the Sherman and Clayton laws, and we are still trying to get some competition out of railroads, though with the power of fixing rates vested in the Interstate Commerce Commission, it cannot matter whether the railroads are controlled by one company or a hundred companies.

It was a perfectly rational proposition to prevent high prices by preventing corporations from combining and suppressing competition. But the purpose of combination for the export business is to make it possible to reduce prices and compete with other nations on more favorable terms. Even if this were not the purpose, or the effect, and the result of combinations were to advance prices, there is no reason why we should concern ourselves about the welfare of the foreigners whose money the exporters are seeking.

There has been a very general belief in this country that goods were sold abroad cheaper than at home, and this has not been wholly without foundation, though there may have been less of it than one would infer from political speeches. There is reason for this feeling only so far as domestic prices may be artificially sustained in order to make it possible to sell goods abroad at cost, or very near it. But if the domestic prices are not unreasonable or artificial, there is no reason why Americans should care if the goods are offered to foreigners at lower prices.

In Germany there has been no objection to this sort of trade, and the kartels, which control the greater part of the export trade, are sustained by the Government and by public opinion in charging high prices at home and selling abroad for any price that competition, or the extermination of a foreign industry, may make necessary.

American public opinion will never go so far as to tolerate that. But where the smaller exporters desire to seek foreign orders in bulk to be divided among themselves, or to divide among several concerns the cost of maintaining a foreign selling agency, it is the height of folly for American politicians to get in the way of a business that brings foreign moneys here to disburse as wages to American workingmen.

INDUSTRIES AFTER THE WAR

(From *Paint, Oil and Drug Review*).

Popular ideas are powerful not in proportion to their truth but in proportion to their general acceptance. In the days of Salem witchcraft it was of no help to the poor woman who was condemned as a witch to know that she was innocent and the whole affair a foolish superstition. The execution went on just the same.

There is a great deal of needless popular conversation going on just now about what will happen "after the war." It has been pointed out by many practical men that for years after the war our industries will be pushed to their limit to supply the needs of the world which it will be impossible for the European nations to furnish because of their own needs and shattered resources. So far from the business demand ceasing in this country, it must go on increasing for a long time to come. Many of our largest manufacturing plants are being compelled to enlarge the size of their plants to supply our own demand, and when the world demand increases, as it must increase, the growth will continue. Some special industries like armor plate and ammunition will feel the depression of course, but armor plate mills can go back to making rails, and ammunition factories can be immediately converted into dye, chemical and drug plants. Carbolic acid, alone, for example, has been produced in this country by synthetic methods from benzol at a tremendous increase in volume, so that we are now producing three times as much as the total domestic consumption before the war, and much more than we could normally consume. But the plants that are supplying this war demand can be converted almost instantly to the production of solo, sodium salicylate, Phenolphthalein, salicylic acid and hundreds of other coal tar preparations for which the drug trade are now paying exorbitant prices to foreign manufacturers.

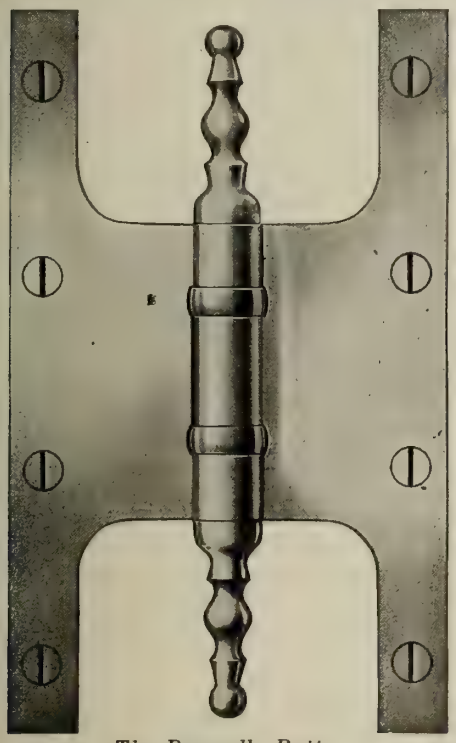
This kind of quick change should of course be planned in advance and carefully studied, and it will be found thoroughly practical both chemically and commercially.

If this is not done and individuals allow themselves to be put in the position of being caught with large supplies of unsaleable merchandise in their hands, then we may expect financial difficulties to arise, but the manufacturers are too shrewd and too far-sighted to allow this to happen when there is so simple a safeguard in sight. But it is not enough that the manufacturers should be prepared against conditions; the public should be made to understand that America has become a world power industrially, commercially and politically and when the warring nations cease fighting, they must come to us and buy to such an extent that our financial prosperity will extend far into the future until such a time as too great prosperity brings inflation and the business world then must pay as in years gone by for their own folly. But the end of the war should measure only the beginning of America's great period of world mastery—the golden age of industry in our native land. Looked at this way, doubt and apprehension cease and no check on our great industrial development need be felt. If everybody stops to worry the dawn of peace might be made temporarily a time of difficulty, not real but none the less harmful.

DAYLIGHT SAVING A SUCCESS

(From *Maritime Merchant*).

Just before the last issue of the *Merchant* had gone to press, the city of Halifax reverted to standard time. After a summer's trial we think it can be said that daylight saving was on the whole a success. At least, on the principle of the greatest good to the greatest number there would seem to be no reason why the plan should not be repeated in future years, for the experiment has been successful enough to warrant that. It would be much better if it were to be made general by federal legislation throughout the whole Dominion, but failing that, or even failing provincial legislation for Nova Scotia, we think the city of Halifax should repeat the plan of "daylight saving" in future years.



The popularity of the present year's innovation was particularly marked among a certain class. People whose occupations took them to work at 8 o'clock or later in the morning were practically all in favor of the scheme. Those, however, whose work began at 7 o'clock standard time did not see the same advantage in it and it was natural that they should not; for the thing that made it so popular with their late-rising brethren was that it gave them a new hour out of the juciest part of the day that in previous years they had been accustomed to spend in bed.

NEW HARDWARE GOODS
OFFERED TO CANADIAN HARDWAREMEN

STANLEY WROUGHT STEEL "PAUMELLE"

The Stanley Works, New Britain, Conn., has recently added a "Paumelle" to its line of ball bearing butts.

"Paumelle," pronounced "Po-mell," is French for hinge, and this design of

The Paumelle Butt.

butts, unlike most other types of builders' hardware, originated abroad.

The long leaves are mortised into the jamb, and are made narrow for a light, or French door.

Because of the artistic effect of the barrel, and the steeple tip, this type of butt is being used on doors of stock thickness. The gauge of the metal and the strength of the butt are such, it is claimed, that it is just as serviceable as the standard type of butts.

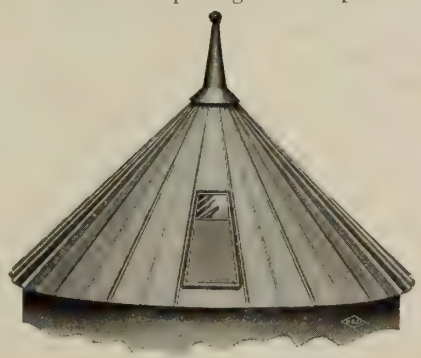
No. 5345 has a long throw. It is made in two sizes, 7½ x 3½, and 7½ x 4½. The dimensions are measured over all, first the length of the butt leaf and then the extreme width of the open Paumelles.

This butt is finished in all standard Stanley finishes, and is packed one pair in a box with screws.

NEW EMPIRE SILO ROOF

The "New Empire" silo roof, here illustrated, is offered to the trade by the Metallic Roofing Co. of Canada, Ltd., Toronto and Winnipeg.

The makers state that the new roof is self-supporting, and has been designed after full and careful investigation into all the requirements of the silo owner.



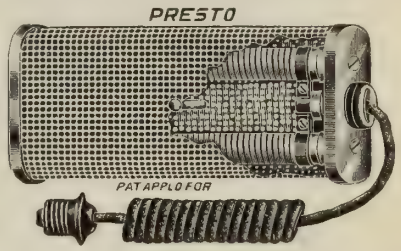
A big light of strong, thick glass, reinforced with wire, is set in the hatch cover, giving lots of light, and a large ventilator surmounts the peak. When the big hatch is open there is plenty of escape for dust and gases while filling, which, it is said, is very important and necessary.

There is only one bolt to each roof sheet, and the big slide side lock, the makers state, is so simple and easy that a child could connect the sheets. Clear printed instructions for erecting go with each roof.

It is also stated that you can put a "New Empire" on any kind of silo—wood stave, concrete, cement block, or hollow tile. A wood plate about 2 inches thick should be put on all but stave silos.

The roof is said to assure protection from fire, lightning, rain and snow. Strong metal straps, attached to the under side of each roof sheet, hold the roof securely against all storms.

The roofs are built to square pitch, so that there is lots of room to stand up and tramp the ensilage. The roof is made of Empire brand galvanized iron. The "hatch" opening is exceptionally



"New Empire" Silo Roof.

large, measuring 2 feet at the bottom by 4 feet high. Complete descriptive matter will be supplied on request.

NATIONAL AUTO HEATER

The National Electric Auto Heater is being marketed by the National Electric Heating Co., Toronto. The heater, it is claimed, will keep the radiator from freezing. It will also keep the engine warm while the car is in the garage. All that is necessary is to put the heater under the hood and connect the plug to the lamp socket. The heater measures

9½ x 3¼ x 1¼ inches, and consumes 200 watts. It is finished in black, and is supplied with 8 feet of cord complete. The heater retails at $3.50.

PRACTICAL SHEET METAL WORK

(Continued from Page 41).

We will now turn to Figs. 5 and 6. First extend the horizontal lines A.B. and another line from XE. and XI., Fig. 3, as shown, the top line solid, the rest dotted, then draw vertical dotted lines downward from line at top as shown at XI. to h. and Fig. 6, X2 to i., Fig. 5. We will now proceed to determine the true lengths of slant lines by placing compass point at bI., Fig. 4 and transferring this to horizontal line Fig. 6. Next b2, b3, and b4, as shown 4, 1, 3, 2, then and repeat the operation in developing Fig. 5, by using a7, a6, a5, a4, from X2, giving 7, 4, 6, 5, as results, and erecting slant lines from i to the latter numbers.

NOTE.—This problem will be concluded in our next issue.—Editor.

TRAIL SMELTER GIVES RATE TO AMERICAN MINES

Recognizing, it is claimed, the increasing importance of the Valley mining district in Stevens County, Wash., the Consolidated Mining and Smelting Co., of Canada, has authorized a reduced treatment charge on ores that go into its smelter at Trail, British Columbia, and the Great Northern Railroad has also announced a reduction in the freight rate, both schedules to become effective about October 1.

The reduction rate will be $1.50 per ton on ore that runs between $25 and $50 per ton, and the freight will be $2.45, or a total freight and treatment charge of $3.95 per ton.

If ore values exceed $50 per ton, a proportionate additional charge will be made both on freight and treatment.

WEEKLY PAINT DEPARTMENT

White Lead Firm at New Price

An Advance of Fifty Cents Per Hundred Pounds in White Lead in Oil Makes Price Same as That Prevailing During the Summer — Strength in Pig Lead Market

LAST week's issue of HARDWARE AND METAL stated that white lead in oil showed a firmer tendency following recent firmness and advances in the pig lead market. This week an advance of 50c per 100 lbs. has been announced on white lead in oil. The recent advance places white lead in oil in the position it occupied (from a price standpoint) from about March 20 to Aug. 16.

During March white lead in oil made the enormous jump of $2.25 per 100 lbs. boosting the price from a previous high level up to $13.95 Toronto basis for ton lots.

About the middle of August following several declines in the price of pig lead, a reduction of 50c per 100 lbs. was made in the price of white lead in oil.

When reporting the decline in the August 19 issue HARDWARE and METAL stated as follows:

"As anticipated for some time past and as predicted by HARDWARE AND METAL several times of late, white lead in oil has declined in line with the weakness of the metal, and is now quoted $13.60 a 100 lb. for less than ton lots and $13.30 for ton lots (Montreal prices). Some surprise is manifested at the amount of the decline as it is felt that the drop is greater than the 35c decline in the pig warranted. This feeling gives strength to the slight undertone of firmness that has crept into the situation coincident with the decline. In some quarters the opinion is expressed that the weakness in the metal market may only be a temporary one and in confirmation of this supposition it is pointed out that white lead and oil maintained their position in the States in the face of the metal decline."

The foregoing opinions were well founded. Hardly had the announcement of the reduction been made, before the pig lead market began to advance and has been forcing itself upward ever since.

Figures compiled on lead prices by the American Metal Market, New York, a leading authority, will give readers some idea of how the pig lead market has fluctuated since the first of the year. The following table shows the principal price changes that have occurred so far this year, New York prices:—

1916—		
Opened		5.50
January 4	Advanced	.25c to 5.75
January 7	"	.15c to 5.90
January 21	"	.20c to 6.10
February 9	"	.15c to 6.25
February 16	"	.05c to 6.30
March 3	"	.10c to 6.40
March 7	"	.20c to 6.60
March 14	"	.40c to 7.00
March 30	"	.50c to 7.50
June 2	Reduced	.50c to 7.00
July 5	"	.50c to 6.50
August 2	"	.50c to 6.00
August 17	Advanced	.25c to 6.25
August 18	"	.25c to 6.50
September 15	"	.25c to 6.75
September 19	"	.25c to 7.00

One year ago the price of pig lead was $4.50. The average price for a year prior to the war was $4.16 New York, and $4.04 St. Louis.

The pig lead market is still showing strength and there are at the time of writing indications of further advances. There appears to be a good demand for lead. Independents of late have promptly advanced their prices following advances made by the Trust. American brokers who do a large export business are in the market for supplies. They are careful, however, in their buying are making every effort to prevent further advances.

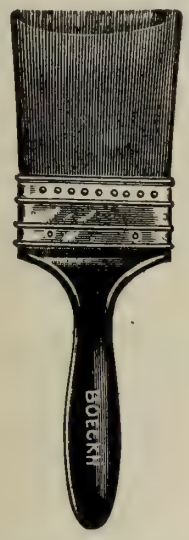
Pre-War Prices

Prior to the outbreak of the war white lead in oil was quoted to the retail trade at $8.20 per 100 lbs. in ton lots, Toronto basis. The price to-day allowing for the advance of 50c this week is $13.95 in ton lots, with 30c per 100 lbs. advance for less than ton lots. A reduction of 60c per 100 lbs. is allowed off the ton lot price for buyers who can take five tons.

The white lead market has been very unsettled many times since the outbreak of the war. It has not been uncommon to hear of quotations made by jobbers, which were considerably lower than the prices being quoted for the same goods by manufacturers. The jobbers making concessions, of course, were those who had and have heavy stocks purchased at much lower prices than prevailing market values.

A Remarkable Procedure

In the issue of May 29, 1915, HARDWARE AND METAL in referring to the pig lead market stated in part, "Lead has advanced in price during the past week and in many quarters higher prices are predicted. It is remarkable that with all other metals having so sensationally advanced, lead should to-day be only about ¼c per pound higher than before the war began. It is interesting to note that there has lately developed a movement for the use of lead instead of spelter in the manufacture of lead-



GUARANTEED

PURE BRISTLES

SET IN RUBBER

MADE BY

BOECKH'S

Established 1856

Boeckh's begin the manufacture of Set-in Rubber Brushes

SCIENCE and experiment are always evolving better ways of doing or making things—brushes among them; and when science and experiment have reached sound conclusions it is for us all to accept the results.

Speaking for ourselves; we've been making brushes in Canada for 60 years. The brushes we made 60 years ago were the best brushes made at that time, but they were far behind the brushes we have been making during recent years. We have learned better ways, because we have not been mind bound. Our own labors and genius in our realm have enabled us to improve our business in every particular, and we expect that the future still will continue to reveal to us new things and better things—though we are frank to confess that it does seem that perfection has already been attained.

All this is introductory to the announcement which we have to make; viz., we are now installing a plant for the manufacture of Set-in-Rubber Brushes.

We'll continue to make **"STEEL GRIP" Brushes,** the absolutely perfect Painter's tool, as Set-in-Rubber Brushes cannot excel them as a working tool, but because a demand has sprung up for the Set-in-Rubber Brush, we are making this Brush as well.

Concerning **Boeckh's Set-in-Rubber Brushes,** the following particulars are given:

The Bristle and Hair in these brushes, as in all our Painters' Brushes, are of the highest grade, and are prepared by our Special process, which retains the elasticity and softness of ends—the part of a brush upon which good results depend.

Boeckh's Brushes, as a consequence, are perfect in quality and wear long and satisfactorily.

Each individual Bristle is held secure by Pure, best quality Rubber, not a rubber cement containing mostly cold tar pitch or other cheaper materials. The butts of the Bristles are completely covered with strictly Pure Rubber while in a semi-liquid state, and then vulcanized until it is absolutely hard and will not under any circumstances permit of the Bristles coming out.

By the introduction of many labor-saving processes, and also owing to the large volume of business, we are able to give extra value, and also supply Brushes that give the maximum of wear, which means satisfied customers.

As we have been manufacturing Brushes for over sixty years we know how to combine quality, style and finish at the lowest possible cost, and to supply the trade with guaranteed goods that, in all cases, give absolutely satisfactory service.

OUR TRAVELLERS WILL SHOW YOU SAMPLES WHEN READY.

The Boeckh Bros. Company, Limited

TORONTO, CANADA

If interested, tear out this page and keep with letters to be answered.

coated sheets to take the place of galvanized sheets. One thing is sure, lead has been selling at very low prices and any marked improvement in the demand would undoubtedly have the effect of advancing prices."

The following week HARDWARE AND METAL stated: "The latest addition to the active list is lead, which on the recent movement has advanced $14 a ton on the other side.

During the last half of the year lead prices declined on several occasions. By the end of the year lead had gone down to $5.50.

The year 1916 opened with lead quoted at $5.50, New York, but the market advanced on Jan 4, and the most important changes since that time are shown in the table in this article.

Production In Canada

Lead is mined in Canada to some extent. Despite prevailing opinion in some quarters to the contrary, and although there was an increase of 25 per cent. over 1914, the 1915 output of lead in Canada has been exceeded in six of the past fifteen years. The production of lead in Canada in 1915 was 45,377,065 pounds. Valued at $5.60 per pound the average price of pig lead in Montreal for the year, the production of 1915 was valued at $2,541,116. The 1915 production consisted principally of pig and manufactured lead at Trail, B.C.

WEEKLY PAINT MARKET

(Continued from page 48.)

before the pig lead market began to advance again, and it has advanced several times since that time. This week lead in the primary markets is firmer for early deliveries. Canada's purchases last week at New York took large quantities of prompt and October lead out of the market.

Paint Remains Firm

Ready-mixed paints remain firm at last week's advance of 20c for whites and 10c for colors. Manufacturers are suggesting that retailers charge 10c per quart more for white paint than for ordinary colors.

The raw material situation is still a serious one for paint manufacturers. A table in last week's issue of HARDWARE AND METAL gave an indication of the heavy increases in the costs of raw materials to the manufacturers.

Linseed Oil Unchanged

Linseed oil remains unchanged at last week's prices. There is still a wide range of prices quoted. The demand for oil cake continues good. The range of local quotations follows:—

	Raw.	Boiled.
1 to 2 bbls., per gal.	..79-83c	81½-86c
3 to 5 bbls., per gal.	..78-82c	80½-85c
6 to 9 bbls., per gal.	..77-81c	79½-84c

Turpentine Remains Unchanged

Local prices remain unchanged on turpentine. The demand continues to improve locally. There is a range of quotations locally as follows:—

	Per Imp. gal.
1-barrel lots	67c to 71c
2 to 4-barrel lots	65½c to 70c
5-gallon lots	72c to 75c

Government making heavy purchase for new arsenal at Lindsay, but will not give out particulars, as they do not want to emphasize such facts at present.

Improved Demand for Glass

The advent of colder weather has improved the demand for glass and putty. Quotations on both lines remain unchanged at prices shown in current quotations.

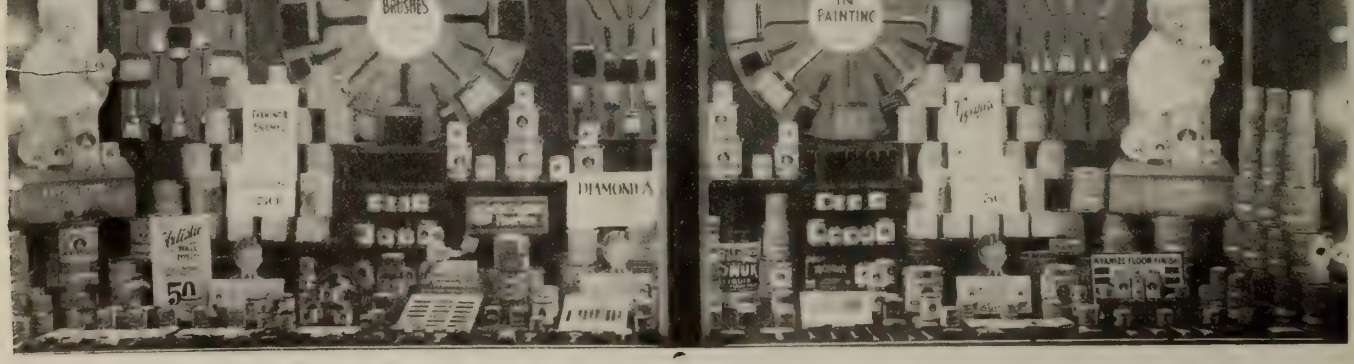
A BLESSING IN DISGUISE

(From *The Journal of Commerce*).

The crop estimates in our Western Provinces have been modified lately owing to the prevalence in some sections of what is called "black rust" in the wheat fields. The same conditions are found in the neighboring Western States of the American Union. In both countries this has been regarded as a misfortune. But words of comfort and encouragement concerning it come from a prominent American banker. "A one year disaster but a ten year blessing," is the description of the situation given by Mr. Theodore Wold, Governor of the Ninth District Federal Reserve Bank, Minneapolis. The damage to the wheat will, he thinks, teach the farmers the mistake they make when they rely so largely on wheat, and will give a much needed impulse to stock raising. His views deserve attention on the Canadian as well as on the American side:—

"Doubtless this year will bring the greatest stimulus ever known to live stock raising on the farms. The wheat crop losses make a better preachment against the one-crop fallacy than all the agricultural colleges of the Northwest States. These losses will do more to bring it home to farmers that the man who is a stock raiser as well as a wheat grower is the man who is insured against loss.

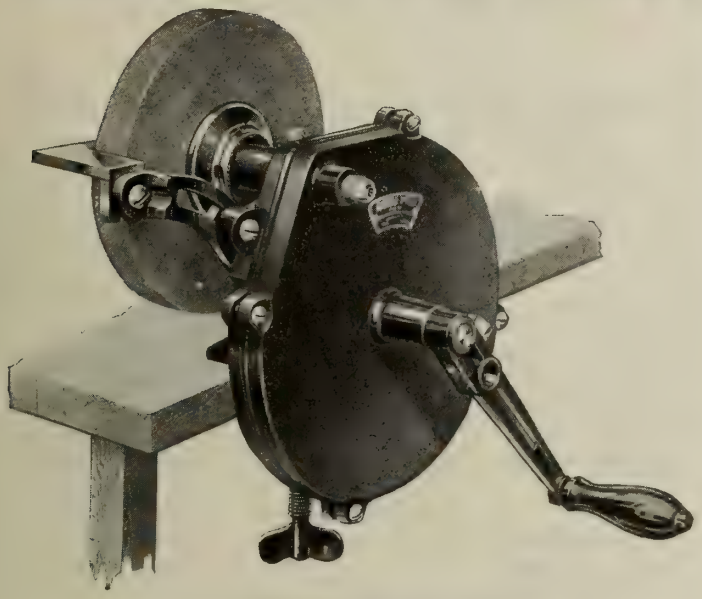
"It is true that wheat has been a good crop financially. Last year the price was high, and again this year the farmer who has a good wheat crop is fortunate. Most of the farmers have no wheat crop at all, or a low yield of poor quality.



"The man who can get $120 these times for a steer is not going to be hard up. Looking at it close up, the year is bad. Viewing it from the long range, it is a blessing. We will all realize this ten years from now."

The damage on the Canadian side is not so great as in the American sections described by Mr. Wold, but it is large enough, and perhaps the lesson as to stock raising may be as useful here as on the other side.

THE POSITION OF NEWFOUNDLAND.



(From *Commerce Reports.*)

From a commercial standpoint, no British colony was affected less as a result of the war than Newfoundland. The principal foreign countries to which its products are marketed remained open (excepting Germany), and the higher prices realized for its fish products, such as cod, herring and seal oil, greatly offset the advanced cost of transportation. Transportation facilities were fairly good prior to the year 1915, but tonnage requirements have proved inadequate since then, due to the war. To somewhat offset the shortage of vessels, thereby relieving the congestion of freight at the home ports and ports in the United States and Canada, old wooden steamships of the sailing fleet are used in addition to several large sailing vessels of the better class, purchased in the United States and Canada.

The above window display will furnish some splendid ideas for the window trimmer when arranging a Fall window.

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, Sept. 27.—Following the rise in price of paints, both white and colored, last week, there has been a lull in the situation as regards changes with the exception of white lead in oil. The manufacturers are studying the effect on demand of the increased prices announced, and though it is a little early to assume that there has been no difference in the way of lessened demand due to economies in paint to meet the increased cost, still the impression all round is that demand is not being in any way affected. Certainly one large manufacturing firm in the paint business was able to report exceedingly brisk demand, more in fact than the firm could comfortably meet owing to the difficulties in regard to raw materials, labor, and the contributory matters affecting the situation. Other large firms experienced steady if not sensational demand and the outlook in general was hopeful for good business during the late Fall.

White Lead Advanced.

White lead in oil has gone up 50 cents per 100 lbs. for the pure product, the price quoted in ton lots for the 1st grade being $13.70c per 100 lbs., for the 2nd grade $12.30c., and for the 3rd grade $10.05c. Lead is a firm market, and it is not improbable, according to some opinion in the trade, that further increases may be seen in lead, the whole metal market being uncertain and erratic with firming tendencies all the time, and occasional relapses to lower figures temporarily.

Dry Colors Difficult

Difficult as ever for the paint manufacturer is the dry color situation. Many accustomed raw materials are very scarce, and the manufacturers are considering with interest the various new chemicals and substitutes being produced largely in the United States to meet the deficiencies of the market supplies of colors to-day. Some of the most successful substitutes are likely to be produced in Canada, for Canadian manufacturers are not idle in this direction, and their experiments are being assiduously carried out. Results so far are satisfactory, but not to be counted upon as productive of contracts for the steady supply of these color substitutes and new color producing chemicals now being experimented with. In another year it may be, if the war goes on, and probably in any case, new and tried Canadian and American color products will be safely established on the market. Already some very satisfactory reds have been offered, and the production of the chemicals which are used in the making of these colors is being carried to real and lasting perfection. Time will find these colors on the market in quantity no doubt.

Linseed Oil Mart Excited

Adverse crop reports from the Argentine gave the market for linseed oil an exciting moment or two this week, though calming counsels prevailed gradually, and there were those who were inclined to discount the worst accounts of crop failure in the Argentine. Canadian crop reports regarding the raw material have hardly reached definite stages yet, but as usual the frost whisper has been heard. Meantime prices for linseed oil remain firm and in the neighborhood of quotations given last week, with a slight upward tendency worth watching in view of the effects of reports as mentioned. There had been a lowering of prices on and off since last issue of HARDWARE AND METAL, and as a matter of markets, prices on date of writing had "risen" 2c since the morning, the rise bringing them back to the level of last week's quotes as under:

	Raw.	Boiled.
1 to 2 barrels	86c	89c
3 to 5 barrels	85c	88c
6 to 9 barrels	84c	87c

Turpentine Firmer

While the market for turpentine was not particularly lively, the prices quoted showed a quiet firming up, the 68c to 70c of last week being firmed up to the general quote of 70c for the present week. Turpentine is rather scarcer, if anything, and demand quite good for the supply available.

Glass Very Hard to Get

Still the glass difficulty continues. Prices are not materially altered from quotations of a week or so ago, and the difficulty is not so much price as scantiness of supply. It seems impossible to get speedy deliveries of glass.

There is labor difficulty on the other side of the border, and the manufacturers are hard pressed with orders for glass. Putty is also harder to get, and in general the glass and glazing side of the painters' business is in strenuous times. Demand for glass has been quite brisk, also to add to the problems of the trade, repairs and preparations for winter are being made fairly extensively now.

Gasoline Unchanged

Gasoline is being quoted at 27½c ex tank car, and 27½c plus $2 for the package, if supplied in wood. The wood package is returnable at a refund of the $2. Although there had been indications of firmness in coal oil at jobbers' prices to the retailer in Montreal this week, gasoline did not show any firmer trend.

TORONTO

TORONTO, Sept. 28.—Following almost immediately the advance in the price of ready-mixed paints, comes the announcement of an advance of 50c per 100 lbs. in the price of white lead in oil. Last week's report stated that the market showed a firmer tendency following recent firmness and advances in the pig lead market. Mixed paints remain firm at the advances of 20c and 10c per gallon for whites and colors respectively, as announced in last week's report. The advent of colder weather has improved the demand for glass and putty, largely for repair work.

Linseed oil remains unchanged. Turpentine remains unchanged at last week's quotations.

The new terms, 2 per cent. 15 days, or 60 days net, decided upon by paint manufacturers, will go into effect Oct. 1. One large paint firm put the new terms into effect about a month ago.

White Lead Up 50c

Following advances in the pig lead market, makers of white lead in oil have advanced their prices 50c per 100 lbs. The new prices are $13.95 per 100 lbs. in ton lots, with 30c per 100 lbs. advance in less than ton lots. Some jobbers still have fairly heavy stock of lead bought at old figures.

Whether or not the price will hold at the advanced figure remains to be seen. At any rate, if the pig lead market can be taken as a guide, it is likely that prices will remain high for some time. When the reduction of 50c per 100 lbs. was made in August last the announcement of the reduction was hardly made

(Continued on page 46.)

Big Orders
for Barn Paint

It's well worth while to push the sale of barn paint. Each order is big enough to give you a very satisfactory profit—and the farmer who comes in to buy barn paint usually has other needs that you can supply.

You can get most of the barn paint orders in your territory if you are well supplied with

B-H BRIGHT RED BARN PAINT

It is a bright, handsome, durable red paint that spreads easily under the brush (an important point with farmers who often do their own painting), covers well and is thoroughly satisfactory in every way.

It is moderate in cost, and has always proven highly popular in every community where it has once been used. Although its widest use is for painting barns, it is equally suitable for schools, roofs, outbuildings, fences, factories—in fact, wherever a moderate-priced, long-wearing red paint is required.

Orders Promptly Filled.

26 gauge	4 15	4 60
28 gauge	4 25	4 70

Re Gauges of Sheets.

On account of it being practically impossible to secure galvanized sheets from England, owing to the war, American mills have decided that they will no longer roll the English gauges to meet this competition. However, they will continue to roll at 10¾ oz., which will be known as such or a 30 gauge, and will take the place of the former English 28 gauge.

SHEETS, CORRUGATED

Torrington, Conn., U.S.A.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTRE. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability.
Made for Brace—made for machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.

YOUR GUARANTEE

GIPE-HAZARD STORE SERVICE CO., LTD.
97 Ontario St., Toronto, Canada

INSTALL Gipe-Hazard Carriers—use them ten days—put them to every test — and if they do not give quicker, better and more satisfactory store service than any other system, they may be returned at our expense. Fair enough, is it not? Investigate our modern Electric Cable Cash Carrier and Pneumatic Dispatch Tubes.

KINDLY MENTION THIS PAPER WHEN ANSWERING ADVERTISEMENTS

If interested, tear out this page and keep with letters to be answered.

Condensed or "Want" Advertisements

There is always someone, somewhere, who is looking for just such a proposition as you have to offer—and it is more than likely that he is a hardwareman and a subscriber to HARDWARE AND METAL. Let an advertisement on this page bring you together.

RATES (payable in advance): 2 cents per word first insertion, 1c per word subsequent insertion. An additional charge of 5 cents for each insertion is made when Box Number is required. Each figure counts as one word.

POSITIONS WANTED

WANTED — EXPERIENCED HARDWARE salesman is open for position as hardware or paint traveller with reliable firm; can furnish best of references. Apply Box 311, Hardware and Metal, Toronto.

AN EXPERIENCED HARDWARE MAN desires position with wholesale or retail. Capable of managing; at present employed. Total abstainer. Married. Best references. Box 310, Hardware & Metal, Toronto. (40)

SPECIALTY SALESMAN DESIRES POSITION as sales manager or traveler. Twelve years' experience calling upon Ontario hardware trade. Box 313, Hardware and Metal.

WANTED—ROAD POSITION IN WESTERN Canada by successful salesman with 14 years' hardware experience, eight years on road in Ontario for large manufacturer of hardware. Can furnish best of references. Box 309, Hardware and Metal. (37)

SITUATIONS WANTED

THE "CHANGING TIME" IS GETTING near. There are many firms who have vacancies on their sales or office staffs to fill during the next few months. If you want to qualify for some of these vacancies, tell your story briefly in a Condensed Advertisement, and try in out in Hardware and Metal. A twenty-five word advertisement may land you a permanent position with splendid prospects.

AGENCIES WANTED

WANTED. — FOR THE MARITIME PROvinces a good selling line or lines on commission. Apply Box 536, Hardware and Metal.

THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms, is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal, under this heading.

STORE EQUIPMENT FOR SALE

YOU MUST HAVE A LOT OF OLD FIXtures around the store which are no longer of any value to you, but would prove very useful to someone else in the hardware business. Find a purchaser for this equipment through an advertisement on Hardware and Metal's Condensed Ad. Page.

FIFTY DOLLARS TIED UP IN OLD FIXtures that you are no longer using, would make a lot of money for you if invested in stock and turned over three or four times a year. Get your money out, by selling the fixtures to one of Hardware and Metal's readers who may be looking for exactly what you have to offer.

HARDWARE WINDOW DRESSING—THIS IS the first book ever written devoted exclusively to Hardware Display. There are 256 pages and over 200 illustrations with full working descriptions. It is the purpose of this book to illustrate and explain how hardware windows may be dressed to the best advantage—how they can be made to sell goods. It is not a theoretical work but a collection of specimens of the best work and ideas of the most expert window dressers in the world. These men have contributed their experience covering the many phases of hardware window display. This volume, therefore, represents the sum total of information on this subject presented as concisely as is consistent with clearness. By following the simple illustrated directions given in "Hardware Window Dressing" any clever clerk can put in good hardware displays at no cost whatever. Size 8x11 inches. Price $2.60 postpaid. MacLean Pub. Co., 143 University Ave., Toronto.

SITUATIONS VACANT

WANTED—RELIABLE MAN AS BOOKkeeper and to look after finances of retail hardware business in central Ontario. One able to assist in management of store preferred. Address, stating experience and salary expected, Box 668, Trenton, Ont.

WANTED—A YOUNG MAN WITH EXPERIence in the hardware business, to act as clerk; also assistant shipper for the shipping room, with some knowledge of checking and packing goods. Please state age, experience and salary expected. Apply to Sumner Co., Moncton, N.B. (43)

BUSINESS CHANCES

FOR SALE — HARDWARE AND STOVE business in the City of St. John. Reason for selling is for want of capital to carry on business successfully. Apply Box 537, Hardware and Metal.

IF YOUR HARDWARE BUSINESS IS FOR sale, who is more likely to buy it than a hardware man, be he merchant, clerk, or traveller? It is only hardware men who read Hardware and Metal, and a condensed advertisement in this paper offering your business for sale, will put you in touch only with the people who will be most interested.

MISCELLANEOUS

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada. (tf)

ADDING TYPEWRITERS WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited, Room 314, Stair Building, Toronto.

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fenson Elevator Co., Toronto.

HARDWARE STORE BUSINESS METHODS —The authors of the articles in this book are for the most part practical and progressive hardware merchants. The embodiment in these articles of the experience of such able and enterprising men and the suggestiveness of the principles and maxims presented make this volume of infinite value to that trade. The 40 subjects discussed include: Rules and Regulations for the Hardware Store; Hardware Buyer; Good Methods in Stock Taking; Prices and Catalogues; Collecting Accounts; The Merchant and His Employees; Changing Business Conditions and How to Meet Them; Profit Figuring System; Starting in Business; Changing a Credit into a Cash Business, etc. 220 pages. Price $1.10, postage paid. MacLean Pub. Co., 143 University Ave., Toronto.

Hearth Furniture Adds to Income

SUGGEST more and you'll sell more. Every home needs some hearth furniture; but the majority of homes are not supplied with

Fire Irons
Andirons, Portable
Baskets
Grate Guards
Spark Guards

These articles (in a variety of styles) we make. Our catalogue illustrates them and gives particulars. With it you can make sales, but you can make more sales if you have some stock.

Send for our catalogue and be ready to answer enquiries and show illustrations.

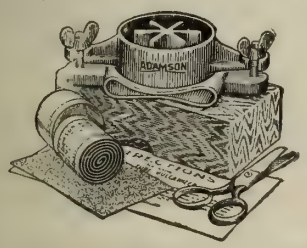
ADAMSON
VULCANIZERS

The only vulcanizers made in Canada

Embody an exclusive principle of operation—no steam or electricity is required. It is absolutely automatic—does not require watching or regulating. No danger of burning or ruining the tires as with other vulcanizers. Saves 90% of "tire troubles" and doubles the life of the tires.

THE SPEED AND THOROUGHNESS OF ITS WORK MAKES BIG DEMAND. AND EVERY SALE NETS YOU A HANDSOME PROFIT.



MODEL "T"—FOR INNER TUBES ONLY.

No cement is used, the Adamson Repair Gum is placed on the tube according to directions. The vulcanizer is applied by simply clamping it centrally over the repair gum and tube as illustrated.

To vulcanize the repair, one ounce of gasoline into the vulcanizer and ignite.

IT'S QUICK.

MODEL "M"—ESPECIALLY ADAPTED FOR REPAIRING MOTORCYCLE, BICYCLE, FORD AND CYCLE CAR TUBES.

This vulcanizer operates the same as Model "T" but is smaller.

It is designed for repairing 3½ in. tubes and under.

IT'S QUICK.

Same discounts, same list prices as in U.S.

Economy This Winter

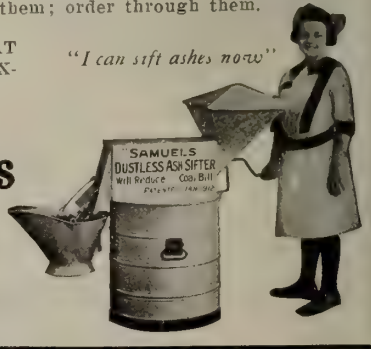
The Government is preaching it. Bankers are, Editors are. For war costs must be paid, and economy and thrift, personal and domestic, will pay our share of the appalling war debt that daily mounts higher.

Economy begins in the cellar—with a CANADA DUSTLESS ASH SIFTER. It will save pounds of coal a day, many pounds in a week, a ton or more in a winter. With coal at $8.00 or more per ton, we ought all to economize.

Put it up to your customer TO SAVE COAL and you'll have no trouble to sell the

CANADA Dustless Ash Sifter

(See illustration)



Ashes go in barrel—coal into scuttle. Positively dustless and lasts for many seasons.

Every family is a prospect, and every sale represents a nice profit—found money to you. Have a half-dozen or so always on hand.

Jobbers everywhere supply them; order through them.

SEE OUR EXHIBIT AT CANADIAN NATIONAL EXHIBITION, TORONTO.

HERCULES POWDERS

Build Your Business On Quality Goods

You realize, as does every progressive retailer, the importance of building your business on quality goods.

But have you extended this principle to the point of specifying a known make of powder, a powder that has the good will of the consumer, when you order loaded shotgun shells?

The powder which it contains is by no means the least important part of a shell. Order the powder as well as the shell *by name*.

Hercules Smokeless Shotgun Powders, Infallible and "E.C.", can be obtained in all standard makes of shells. The salesman from whom you order shells will be glad to give you a Hercules powder if you ask for it. By so doing you make sure that you supply your customers with a powder that will give satisfaction—a powder of high and uniform quality.

So the next time you order shells specify Infallible and "E.C.". When the shells are delivered you will find the name of the powder on the box and on the top wad. Look for it.

Game Farming

Have you written us yet about game farming and its effects upon your business? If you have not it will be worth your while to drop us a line.

You are probably familiar in a general way with the work we are doing in this connection. You may not know, however, that you can tie it up with your business to your profit. Ask us about it.

HERCULES POWDER CO.

9 West 11th Street, Wilmington, Delaware

Seafoam Electric Washer and Wringer

(2 Styles)

No Worry—Little Work, in the Home Laundry with this **LABOR SAVER.**

A GOOD SEASON AT HAND

With harvesting and threshing at hand—and lanterns being put into commission for the long nights—the demand for Dry Cells is heavy. Price is of less concern than the service the article performs. An old battery is a poor investment—it breeds dissatisfaction on the customer's part and criticism for the dealer.

All Western hardwaremen should stock the NORTH STAR NO. 6. You always get it fresh. It gives satisfaction to the customer—profit to the dealer, and credit to the manufacturer.

THE WESTERN BATTERY FOR THE WESTERN NEED

Have your jobber supply you.

CANADA DRY CELLS, LIMITED, WINNIPEG, CAN.

UNIVERSAL

Your Stock Should Reflect Your Own Opinion of the Goods You Offer

No.	Capacity	Weight packed	Height over all
435	5 cups	3 lbs.	8 in.
437	7 cups	4 lbs.	9 in.

Quality Service

Courtesy in Business

* * *

Fittingly framed and hanging in the Offices of one of the most important Public Service Corporations on this North American Continent is the following

'Did you say Please and Thank you?'

Broad minded men direct the destiny of that Corporation, men who know that public or private enterprises to be lastingly successful must operate for the public good.

Quality and Service are the two important factors in our business life today, but Courtesy is the door through which they must enter.

We are large producers of Hamilton Pig Iron and our output of Open Hearth Steel Blooms and Billets, Iron and Steel Bars of all shapes and size runs into enormous tonnage.

The products of our mills include practically everything that can be manufactured from Iron and Steel and these we distribute to thousands of satisfied customers.

Our business is an extensive one and a successful one. The World is our market: but our prosperity and success in the future, as in the past, depend upon the continued confidence, co-operation and good-will of the people we serve.

Mr. Dealer: Here's Your Chance to Make Your Store Headquarters for Best Trade.

PEERLESS Poultry Fencing

Not Mere Poultry Netting

Here is a fence you can sell.

Stands up straight, stretches flat, all wires of even length.

Made of Open Hearth Steel Fence Wire—tough, elastic, springy—will not snap or break under shock or atmospheric changes. Our method of galvanizing prevents rust. Will not flake, chip or peel off. The joints are securly held with the "Peerless Lock" and can be erected on the most uneven ground without buckling, snapping or kinking. The heavy stay wires prevent sagging and require only half as many posts as other fences. Keeps all animals out, confines the smallest chicks, they can't get through.

Valuable Territory Open to Good Dealers

We still have many fine openings for good reliable dealers. If you want to be the leading fence dealer in your locality, write at once. Never has there been a better time to sell quality fencing. You can make your store headquarters for the best trade. Don't fail to write and get our Dealer's Proposition.

Gun Tools That Are *Right*

Marble's Gun Cleaners, Rods, Oil, etc., are known and used the world over by experts and amateurs. Practical in design, highest in quality, right in price, they represent the biggest value obtainable. YOUR PROFIT is what it ought to be.

MARBLE'S RIFLE AND SHOT-GUN CLEANERS

Can be attached to any standard rod. Sections are composed of washers of softest brass gauze, made a trifle less in diameter than the bore for which intended. By this arrangement the spring of its tempered steel backbone presses but one side of each section against the bore and the twist of the wire causes the cleaner to revolve, touching every part of the bore, removing every atom of lead, copper, rust or powder crust. Will not harm the finest gun. State calibre when ordering.

For any calibre rifle ..... 50c.
For any gauge shotgun ..... 75c.

MARBLE'S JOINTED RIFLE ROD

all steel—or brass with steel joints. Can't wobble, bend or break. Stronger, more convenient than a one-piece rod. Swivel in end section prevents joints from unscrewing when in barrel. Wood handle. Each rod complete in cloth bag. 26, 28, 30 and 34 inch lengths. All calibres, .22 to .50. State calibre when ordering. List price, $1.00.

MARBLE'S Nitro-Solvent Oil and Anti-Rust Ropes

are the best gun insurance on earth. Nitro-Solvent Oil dissolves and removes all residue of black or smokeless powders—including Cordite. By saturating Marble's Anti-Rust Ropes with this oil and drawing into gun or rifle barrel, the weapon can be left indefinitely without fear of rust or dust injuring it.

See Catalog for Complete Details

Your jobber can supply you with any and all of Marble's Specialties, including Game-Getter Gun.

5350 Delta Avenue Gladstone, Mich.

All Selling-Records Will Be Broken This Christmas By

ERECTOR

"The Toy like Structural Steel"

This is the biggest year in the history of the Erector business.

The tremendous increase in orders received from dealers indicates their constantly growing appreciation of Erector's superior merits and unequalled talking points.

Dealers who handle Erector will sell more sets this Christmas than ever before, and make more money:—

Because—There will be more and better Erector advertising for 1916 than ever before.

Because—The new, big idea back of all 1916 Erector advertising will fire the imagination of all real boys, and win the complete approval and interest of their parents.

Because—Our intimate co-operation for dealers, the way we **actually help them to make sales,** is even broader in scope this year than it has been in the past.

If you are not familiar with this Erector co-operation, and the new, big idea back of Erector 1916 advertising, write us for complete information.

Christmas is not far off—

Place your Erector order now!

There's Big Money in the Agency for *THIS---*

MANY novel features, as well as its simplicity and ease of operation, mark a new era in range construction and put new life in range demand.

Burns any kind of fuel, and will do more work with less fuel than any other range made, because it has double the oven capacity of the ordinary range. Each oven is 20 inches square and works perfectly. Both ovens have perfectly smooth walls and floors, and the joints being airtight, there is not the least trouble in keeping them beautifully clean.

Each oven door is fitted with thermometer, and made to drop level with the oven bottom; in addition to which the lower of "DAYLIGHT OVEN" is fitted with specially tempered glass, and is just the right height for easy operation. The BACK surrounding the cooking surface is of white Porcelain Enamel, 19 inches high. This not only presents a beautiful appearance, but can be kept perfectly clean, and is the most sanitary finish that can be procured. The SHELF above this back leaves plenty of space below for pots, etc.

The Enterprise Perfect Double High Oven Range

The RESERVOIR IS DETACHABLE. It simply hooks on, and can be attached or detached in an instant. It is made of Heavy Sheet Copper and holds 9 Imperial gallons.

The FLUES are large and of the simplest construction, ensuring easy operation, and will not clog with the dirtiest fuel. The CLEAN-OUT DOORS are so placed that the flues can be easily cleaned from the front.

Secure the Agency for this Wonderful Range for your locality and write to-day for a copy of our New 104-page illustrated Catalog, just out, showing one of the finest and most complete lines of ranges and furnaces made in Canada.

Connor-Made Washers

Prized by housewives who know

You'll have something really good in the Connor line of washers. It never fails to give the users the utmost in satisfaction.

It is always working to your interests, building confidence in you, by its distinctive service.

Illustrations below show only part of the Connor line. Send for our complete catalog.

"Canada First"

The Machine that Works Easier Loaded than Others do Empty.

The gears connected to the high-speed fly-wheel (which supplies the momentum) are spiral machine cut, which means that they are accurate to a hair-breadth, true and smooth, and absolutely noiseless. This is one of the features that put the "Canada First" in a class by itself.

The "four-winged" wooden dolly means quick and thorough washing. No chance of tearing the clothes. The machine that works easier loaded than others do empty.

Fly-wheel runs on ball bearings. The special spring attachment on cover permits it being raised without effort of the operator.

Low Pressure Water Motor

The motor on this machine is made on the most approved design. The success of this motor is verified by the thousands now in use, giving such splendid results.

This is not the poppet type of motor which soon gets worn and means leaking connections with the consequent loss of power. The valve moves backwards and forwards, changing the direction of the water. The action is positive and sure and is a method of construction that will give permanent satisfaction.

The most satisfactory water motor washer on the market, try it—where the others won't work.

Connor Ball Bearing Washer

Efficiency with ease is the keynote of this machine, and its sterling qualities are acclaimed by thousands of satisfied users. The whole weight of the tub rests and rotates on a set of large ball bearings.

Two motor springs reverse the motion of the tub as it is swung from side to side by the operator.

The Rubbing Board being attached to the cover when open, allows the water to drain back again into the tub. This is in direct contrast to the machines of this type which require the dripping wet Rubbing Board and cover to be taken out of the machine entirely.

Drop a card for full details.

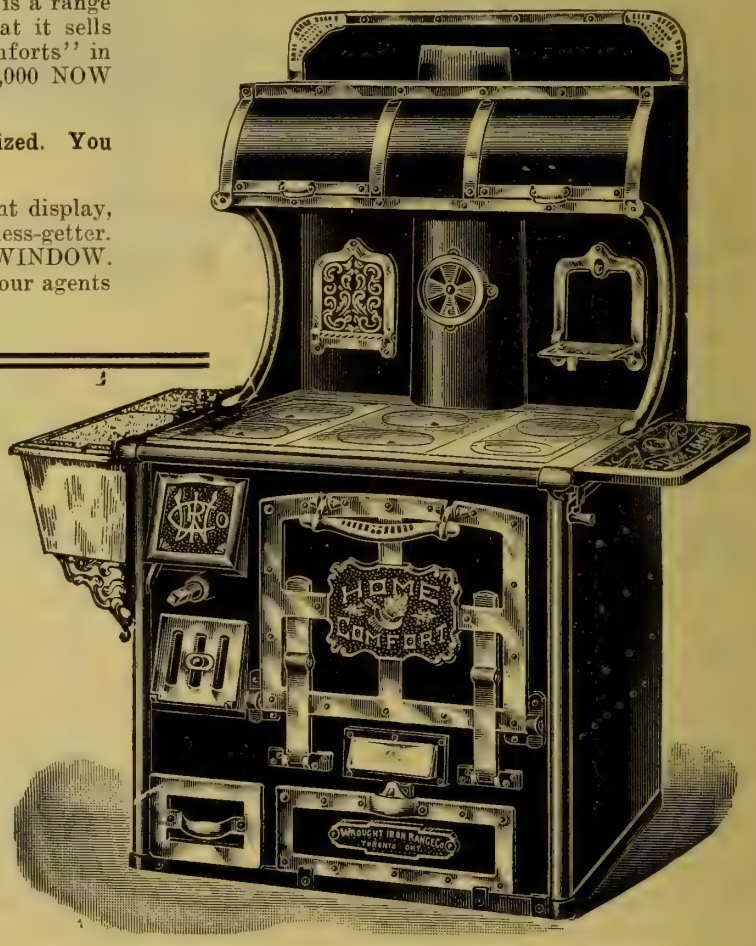
Fall House Cleaning—

The Semi-Annual Change for the Better in the Home, is On

This is a time when wants are felt most in the home. A little thing here and there is required to put the finishing touches to the beauty of the home and make things comfortable for the Winter.

THE "HOME COMFORT" RANGE

will bring pleasure to the home in more than one way. It's nicely finished, a splendid cooker and easy on the fuel.



It's as solid in value as it looks in appearance

SOLD DIRECT TO THE CONSUMER FOR MORE THAN TWENTY YEARS

The old policy of going direct to the consumer was abandoned two years ago, and we are NOW SELLING THROUGH THE HARDWARE DEALERS. But we want to say to hardware men that the Home Comfort Range is thoroughly well-known all over Canada and in particular Eastern Canada, and **has a great reputation.** It is a range so well introduced and so greatly esteemed that it sells readily. Doubtless there are many "Home Comforts" in your own vicinity. All told, there are over 50,000 NOW IN USE.

The "Home Comfort" Agency is one to be prized. You satisfy perfectly and profit immensely.

Our hardware dealer agents will find a prominent display, at this time of the year especially, a great business-getter. PUT A HOME COMFORT RANGE IN YOUR WINDOW. Write for our catalogue and proposal. We help our agents to find buyers.

Construction:

MATERIAL: Best quality of open hearth, close annealed cold rolled steel, and trimmed with the best quality of soft annealed malleable iron.

BODY: Sixteen Gauge in one piece.

OVENS: Fourteen gauge with twelve gauge bottoms heavily braced with malleable iron to make warping impossible.

FIRE-BOX is lined throughout with heavy grey iron castings, having projections that retain the fine ashes and thereby increase the extraordinary enduring qualities of these linings.

GRATES: Heavy duplex pattern. They need only be reversed for burning wood.

WARMING CLOSET: Made of highly polished steel with double rolling doors, which may be left open at any time without inconvenience.

TANK: Sixteen oz. copper contact, heater adjustable on front of range.

NICKEL PLATING: Very best quality obtainable and made plain and easy to keep clean, the whole making a highly ornamental effect.

GUARANTEE: The working qualities of the range are fully guaranteed under reasonable draft.

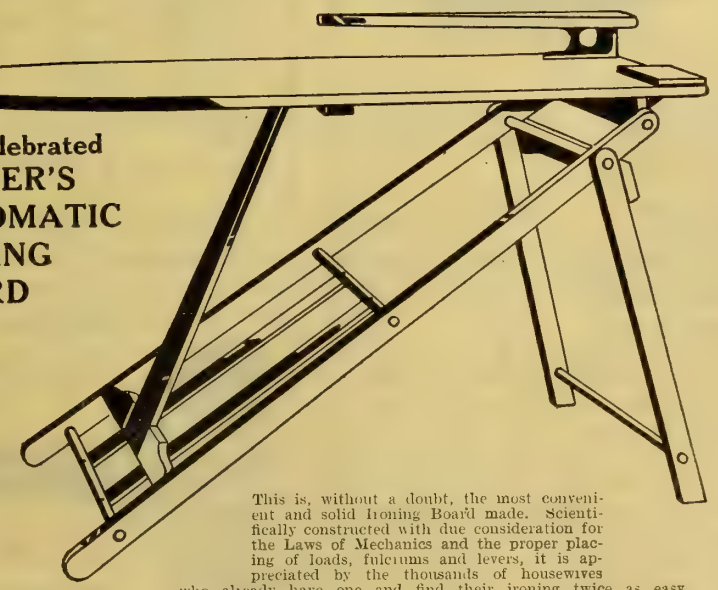
More than one hundred thousand (100,000) of these machines have been sold. Can you beat it?
Those who have it would not be without it, and heartily recommend it to their friends.

Open Ready for Use

Closed

ELEVATING CLOTHES BARS

Necessary in every kitchen. It does not occupy any floor space, and when not in use, drops down out of the way. The bars slide up and down on the wall rod, so that they can be elevated to the desired distance. It saves reaching up to hang the clothes, as the bars can be filled when extended open in the lower position, and then can be pushed up out of the way, "like an elevator."



Length of arms, 28" Size, Closed, 35 by 7¾ by 2¾". Weight 5 lbs.

CROKINOLE, No. 2

Beautiful burl walnut finish. Schultz Crokinole Boards always command a higher price on account of their superior quality and finish. Each board is supplied with two sets (twelve each) of black and white discs and a book of rules. Size 31 by 31 by 1¾". Weight, 11 lbs.

The Celebrated BECKER'S AUTOMATIC IRONING BOARD

This is, without a doubt, the most convenient and solid Ironing Board made. Scientifically constructed with due consideration for the Laws of Mechanics and the proper placing of loads, fulcrums and levers, it is appreciated by the thousands of housewives who already have one and find their ironing twice as easy, because the Board is so easy to handle.
The Sleeve Board is mounted on an iron stand, is attached, and works on a pivot, swinging out of the way when not in use, and always ready instantaneously when wanted. It goes with every board.
An Iron Holder comes attached to the Board.
Selected Wood Top, 15 by 54". Sleeve Board 5 by 27". Weight 30 lbs.

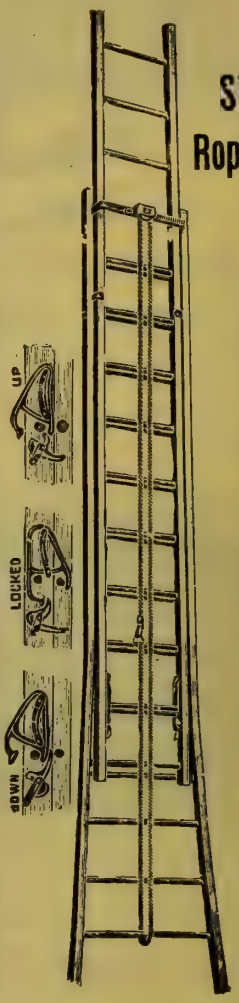
MACLEAN NEWSPAPERS IN THE LEAD.



The Sixth Annual Report on Wholesale Prices in Canada has just been issued by the Dominion Government. The report is in book form and consists of 312 pages. In issuing a report of this kind, containing many thousands of quotations, all of which are open to the criticism of wholesalers throughout the Dominion, the Government authorities must of necessity, secure their information from the most reliable sources. The prices on various commodities are given in tables. Some of the tables contain as many as fifty-two prices. In all, there are 242 sets of tables. It is interesting to note that two MacLean newspapers, CANADIAN GROCER and HARDWARE AND METAL, head the list in the number of tables of prices given in the reports. The list of publications, with the number of tables they have contributed, is as follows:—

CANADIAN GROCER	60	*Sets*
HARDWARE AND METAL	49	"
Toronto Globe	37	"
The Canada Lumberman	13	"
The Trade Bulletin	12	"
Maritime Merchant	11	"
Grain Growers Guide	8	"
Can. Pharmaceutical Journal	8	"
Northwestern Miller	6	"
Montreal Gazette	6	"
Manitoba Free Press	5	"
Pulp and Paper Magazine	5	"
Engineering and Mining Journal	5	"
Le Prix Courant	3	"
Canadian Mining Journal	3	"
Canadian Farm	3	"
American Silk Journal	2	"
New York Journal of Commerce	2	"
Le Moniteur du Commerce	2	"
Census & Statistical Monthly	1	*Set*
The Weekly Sun	1	"

If you have a business to dispose of, or are in need of efficient help, try a Want Ad. in Hardware and Metal, and let it assist you in filling your needs.

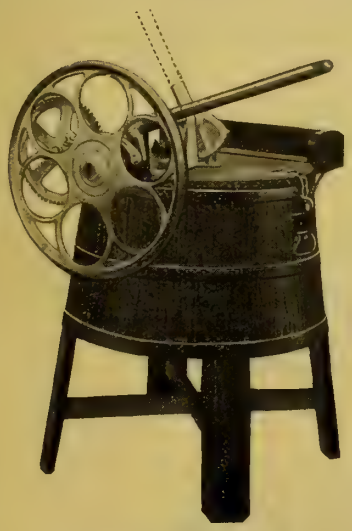
40 YEARS OF SPECIALIZATION

Forty years devoted to the exclusive manufacture of cleaning devices has given the name BISSELL'S such prestige in the mind of the prospective purchasers that it requires no effort to sell them a BISSELL'S. Although there are cheaper cleaning devices on the market the recognized quality of the BISSELL line makes the slight difference in price count for nothing.

Every woman knows that when she buys a BISSELL'S she is investing in the most efficient cleaning device that can be purchased. She knows that the price is standard. All our advertisements appearing in the leading national publications state the price plainly, and it makes no difference when or where she purchases it, the price is always the same. No sales, no cutting of profits, the price of a BISSELL'S is always the same the year 'round.

The vacuum sweeper, powerful, easy running, easy emptying, stands alone in its field. It has features and conveniences that you find in no other make.



The carpet sweeper, easy to run, requiring no adjustment, makes housekeeping simple, sanitary and easy. It is not equaled by any other cleaning device, regardless of cost.

Standard in quality, standard in price, backed by the prestige gained through forty years of the exclusive manufacture of cleaning devices, offer BISSELL dealers an ease of sale and an ultimate profit that is equaled by no other device of its kind.

The Watrous-Acme Barn Door Latch

is being applied to many new and old barn doors each year. Among its many good features are the following:

1. Firm, strong action. Operated easily with a single motion.
2. Generous size. Long springs of Sherardized piano wire.
3. Adjustable for doors from ⅞" to 1¾" thick.
4. Well placed handle, remote from joint—no danger of pinching fingers or bruising knuckles.
5. Even should the door sag, the latch and padlock attachment are so constructed as to operate effectively.
6. Comes japanned or galvanized. So constructed as to practically preclude rusting.
7. The latch locks automatically and is operated from either side of the door, as shown in cut.

The difference in cost between this and an ordinary latch is not as great as some barn-owners think. Tell them so.

Are you carrying this latch in stock? It provides a good margin of profit and satisfied purchasers. Write our Dealers' Service Department for information and your letter will have our prompt and careful attention.

Vol. 28 TORONTO, OCTOBER 7, 1916 No. 41

Expanding by Modern Merchandizing

Firm Located in Small Western Town Has High Ideals and Believes in Letting the Public Know About Them—Every Employee a Booster for Better Service.

"WE haven't in our employ by any means all those who are devising ways of better serving the people of Vermilion; but we will say that all those connected with our big business undertaking are daily endeavoring to better the service we are rendering."

The foregoing statement by Nellis & Law, hardware merchants, of Vermilion, Alta., briefly sets forth the aims of a firm located in a town of slightly over 1,000 population. This firm is constantly reaching out for new lines which will interest the residents of Vermilion and the surrounding country. By giving a better service daily, and by endeavoring to keep the public well informed regarding the new necessities which are constantly being placed on the market, Nellis & Law are working to win the confidence of their customers. "Service and the ability to serve their customers" is the principle upon which they are building up their business.

The Town of Vermilion is on the Vermilion River. It is served by the Canadian Northern Railway main line from Winnipeg to the Pacific Coast. The population is estimated at 1,300. The town is located in the centre of a mixed farming, grain growing and stock-raising district. It has banks, churches, implement agencies and other institutions usually found in a town of its size.

Well Displayed Goods

Believing that goods well displayed are half sold, Nellis & Law endeavor to have samples of all goods on display. Samples of shelf goods are shown on the face of shelf boxes. A recess in the shelving has been provided for showing guns and rifles, etc. Another is used for displaying hatchets and tools, etc. The office is at the rear on the right side.The paint department is at the rear—to the left.

The centre aisle of the store is used for displaying heavy goods, such as stoves, churns, washing machines, forges, mounted grindstones.

A display table near the front of the store is used for displaying seasonable goods. At the time the accompanying picture was taken, the table held a display of horse brushes, curry combs, scrub and household brushes, grinders, food choppers, horse blankets, etc. The table is located where customers are bound to see it when they enter the store.

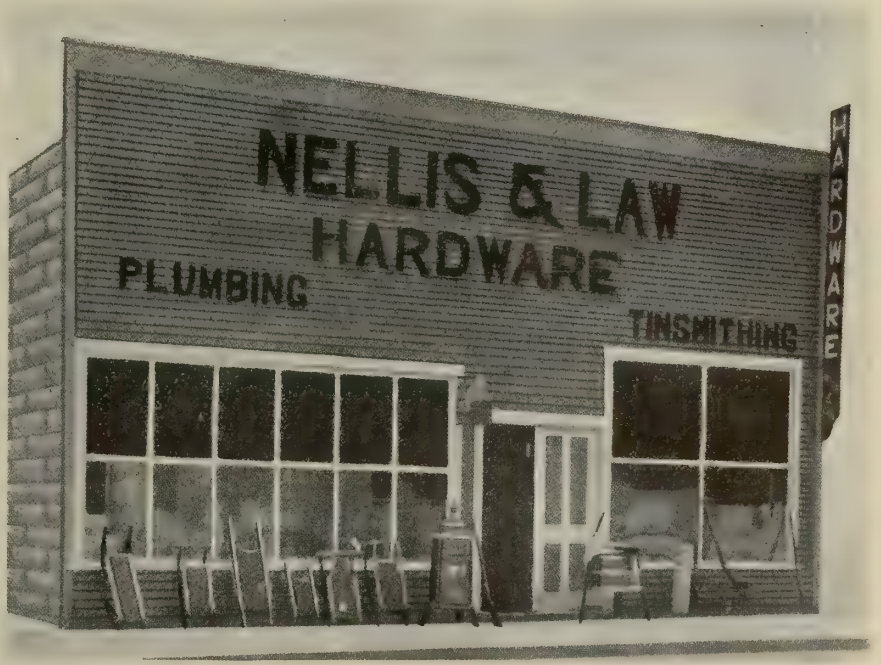
Naturally a large portion of the firm's trade is secured from farmers. The stock is one such as might be found in a good farming district.

A tinshop and plumbing department is carried on in connection with the business.

Household lines are always kept well to the fore.

Several Advertising Mediums

Various forms of advertising are used. Personal contact counts for a great deal in this business.



Good use is made of advertising literature supplied by manufacturers. Calendars are distributed around the first of the year. Last year's calendar was an exceptionaly attractive one. An illustration of the store front occupied a prominent place. Cuts of the proprietors, W. B. Nellis & John Law, were also shown. A list of the various products carried by the firm was also featured in the calendar.

A Strong Appeal

Nellis & Law also believe in printer's ink. The following strong appeal under a two-column heading recently appeared in a Vermilion newspaper:—

"In the business of to-day there are countless people who are discovering new ways of doing the old things.

"Sometimes we think—'Ah, here is an idea, a new thought, a new service'—whereas if we but knew it would be not a new principle or new law, but a new interpretation of the old one. Mer-

Nellis & Law, Vermilion, Alta., are believers in publicity and have placed their name prominently before the public.

chandising is not a new discovery. The old laws of barter laid the foundations for our modern conceptions of the principles governing business.

"In the last analysis, it is the man who best serves his fellow-men who is most worthy of their support and patronage.

"We haven't in our employ by any means all those who are devising ways of better serving the people of Vermilion; but we will say that all those connected with our big business undertaking are daily endeavoring to better the service we render.

"This year saw many new obstacles created over which we had to climb our way. That we are daily climbing higher, and that the wheels of our progress are not being mired in the slough of derision and the adverse circumstances with which we must contend, speak marvels for the calibre of our employees, and the support given us by the residents of Vermilion and district.

"Our stocks of merchandise are being constantly replenished and enlarged, even in the face of war markets and the increasing shortage of goods.

"With us the spirit to conquer and the spirit to serve go hand in hand. That our customers' wants may be supplied in a way even better than that of bygone years, we have been forced to find new worlds and then to conquer them.

"Only those upon the floor of the world's markets can in any way conceive the Herculean task involved in getting goods to supply our customers' wants.

"Our stocks are larger than ever before, our staff is more efficient, more highly-tuned, more responsive to your call for dependable, speedy service.

"To a man we fully appreciate the bounden duty of service with which we are entrusted. No obstacle is too great, no demand too insistent, no service too exacting for our organization to master or render, and always we are eagerly devising new ways of perfecting the old laws of supply and demand.

"The 'we' is everyone connected with 'The Big Hardware House.' To be one of us, a man must have foremost in his mind the value of service. We give the best we have, the best in us, the best work of which we are capable in order that the service we render our customers may be the best in Vermilion.

"Service this year means going further and further afield for the goods our customers want. It means to relieve them of the constant thought that markets are daily receding, and that many articles are almost impossible to get. It means to make our business better than usual in the face of unusual conditions. We cannot emphasize too strongly the position we strive to occupy in your daily scheme of things—we are symbolic of new thought—of new ideas—of new creations, of ever striving towards a higher goal, of eagerly endeavoring to better all merchandising conditions—back of our thoughts and enthusiasm, back of our ambitions and eagerness to serve—is the dominant, vibrant will which is determined to do.

"Our business is to serve you, our business will be to serve you; and every man with us is responsive to the spirit of service. Every day we introduce new ideas, every day we push our business higher up; every day we give greater value, dollar for dollar, than anyone else is equipped to give. We lead, and our leadership is based on our ability to serve.

"We appreciate our position as a supply house, and in this hour of struggle to get goods, we are fighting day and night to obtain our stocks in satisfactory quantities. To improve the way we handle these goods in your orders, every member of the Big Hardware House is devising new and better ways of service.

"Ours is a vital, throbbing, humanized undertaking buoyed up above all obstacles and spurred into greater efforts by the knowledge that we owe you at all times the best of which we are capable. That best is rapidly expanding.

"NELLIS & LAW,
"The Big Hardware House."

Interior view of the haraware store of Nellis & Law, Vermilion, Alta.

Stoves Are In Brisk Demand

The Problems of the Manufacturer, and Methods of the Retailer for the Present Season Involve Certain New Points Worth Noticing—To Effect a Sure Stove Sale.

STOVE and range manufacturers in Canada are this fall confronted with several problems. Every separate item in the manufacture of stoves, heaters, and ranges has increased in price. Steel is more expensive; iron is more expensive; asbestos and nickel, rivets, bolts and nuts are more expensive; last, but by no means least, labor is more expensive. Many men who in past years made stoves have gone to make munitions or fight the country's foes. Women are not available as help in the stove-making industry to the same extent as in other industries, or even in munition making. It is not possible for the manufacturer this fall to place on the market a stove or a range of pre-war-time quality at pre-war-time price. Prices for ranges and stoves and heaters have risen, and are likely to go higher.

Present Costs High

When price lists for these come to be made out on the basis of present cost of materials and of labor there will beyond doubt be considerable changes upwards. At present, prices are not so tremendously increased, for the manufacturers had very large stocks of the necessary materials on hand about the time the war broke out, and although labor cost has increased quite considerably, the producers have been contented with smaller profits than ruled before the war. The first increases in the price of stoves and ranges did not go by any means all the way to offset the increased value of materials and the greater cost of labor.

Pays to Make Good Goods

It is not likely that anything lighter in material or less perfect in workmanship will go on the market to replace or substitute for the original qualities and designs in stoves and ranges as they increase in price. Canadian manufacturers find that it pays best to put out a good substantial stove or range, with weight and wearing qualities, worth while. The Canadian-made range or stove is an article very perfectly adapted to its purpose and the country of its use. Heavy in the parts where a stove ought to be heavy, and lighter where lightness is an advantage, Canadian-made stoves and ranges can hardly be improved by any new economy in metal, consequently the market is unlikely to find novelties introduced at lower prices, or pre-war-time prices. As a matter of fact, manufacturers are adhering largely to standard, and well tried lines for the present season's production, and probably for the production also which is destined to go on sale next year.

There is a good demand this fall for the ordinary standard style of range with high warming closet. The variations of this style are in request as usual in particular cases, but the plain average stove keeps on selling, and is as a matter of manufacturers' experience this fall in even greater demand than ever. Demand for elaboration in ornament or for the simpler styles of nickel-plating depends upon district. Quebec will always as a province go in for more of the ornamented styles of stoves than Ontario or the West.

The use of tiles white, tinted, patterned, or colored is growing in popularity where high-class stoves are asked for, and enamelled surfaces are also proving attractive in many lines of stoves.

Retailers Could Improve Sales Methods

While the demand is brisker this season for stoves even than usual in fall, and indicates a period of more than merely passing prosperity in the Dominion, the methods of retailers in making sales or inviting attention to stoves do not seem always calculated to produce the best results, declare manufacturers.

Stoves Should Stand Out

In the opinion of one leading manager in the stove-making industry, too many retailers have a day of displaying stoves all jumbled one against the other, or at any rate, too near together to allow the prospective customer's eye to take in the good points of any particular stove without being confused by the nearness of another range. While the nickel and mirrors on one are dazzling, the tiles on another are trying hard to attract notice, and the oven thermometer or enamelled surfaces of a third are claiming attention. The result is that the customer decides to look around further, and probably buys where one stove is so displayed as to give opportunity for close particular examination of its excellences undistracted by the excellences of other stoves in too close proximity.

Let the Customer Look Around

"In selling a stove," said one expert, "it pays the salesman to let the customer look all around the stove display quietly, but the salesman should carefully note which stove takes the customer's fancy first. That stove (if the price quoted upon it is within range of the customer's purse) will be the one to talk upon, the one which will eventually make the sale. It is very doubtful salesmanship for a retailer or his clerk to talk about the various points of a number of stoves in trying to effect the sale of only one stove."

All the good points of the stove should always be brought out in the selling talk, and freest possible opportunity provided for examination of the range in every part.

Women Keen Judges

Women are keen judges of the working and interior parts of stoves, even more so than men. If a salesman has quietly and convincingly talked up the good points of a good range or stove, the chances are that the customer will return and make the purchase later even if inclined at the time to "look round further." But if a bewildering display of stoves has been talked up at random, and a dozen different advantages of a dozen different ranges have gone whirling through the customer's mind, the chances are that the customer will buy at the first store where the better method of display and salesmanship is used.

Weight Important Factor

A point in clinching a good prospective sale is the point of weight in regard to stoves. It is never to be forgotten that one of the chief values in the stove after the workmanship is the weight. Every retailer and range salesman should know and emphasize the weights of various stoves in showing them, and especially where the weight argument is in favor of the sale to be made. Men are more interested in the weight argument perhaps than women, but a woman does not invariably judge of a stove by its appearance and convenience. She wants quality also, and weight means quality.

"And yet," said one manager of long experience in the stove trade to HARDWARE AND METAL, "not one retailer in a hundred, as a rule, can tell off-hand the weight of a stove or range."

The Mail Order Menace

In issuing lists and advertising to meet the growing menace of the large mail order firms in the supply of stoves and ranges the excellent arguments of service, substantiality, weight, and opportunity to examine the stove or range

(Continued on page 42.)

WOMAN THE BUYER

WOMAN is the big buyer nowadays. She buys practically everything for the household. Sometimes she even helps to purchase her husband's clothing. If an automobile is to be acquired the wife, despite the fact that she knows less than nothing about machinery, is a very potent force in the matter of making a selection; at the very least she holds and exercises the power of veto. Yes, woman is the big buyer and most sales campaigns are focused directly on her.

It follows that the woman is becoming a buyer of hardware. She goes there primarily for household goods—kitchen utensils, silverware, specialties of all kinds—but her interest in hardware, which begins there, does not end at that point. She is gradually branching out and taking an interest in practically everything the hardwareman carries. It is the commonest of occurrences for sales of paints and varnishes, glass and putty, nails and tacks, locks and bolts—and so on through the list of hardware staples—to be made to women.

This is perhaps the most important development that has come about in the business in recent years. The time was when the hardware store was the almost exclusive haunt of the men. When anything in that line was needed the head of the household saw to it himself. The change, it is important to note, came about through the gradual absorption of the household goods business into hardware. When the dealer in hardware began to handle extensively and feature such lines as constitute this department, he first won the interest of women as buyers. This is important to bear in mind for it establishes the fact that the household goods department is the starting point, the foundation on which all trade with women is built.

There is a certain dealer in Western Ontario who now has one of the livest hardware stores you will come across in a week's travel. He began twelve years ago as a stove dealer exclusively. His experience then was that he had to win over the woman every time before he made a sale. Consequently, he began to realize that his success depended upon winning the interest of the women of the community, and with that purpose in mind he began to go extensively into all kinds of kitchen utensils. He was about the first dealer in town to feature aluminum ware on a large scale. His first two years in business had been full of financial subterfuges and strenuous efforts to make both ends meet owing to his lack of capital. For that reason he had not done any advertising. As soon as he began to increase his stock of kitchen utensils, however, he saw that it was going to be necessary to advertise. He went to the proprietor of the leading local newspaper and arranged for a line of credit; that is, the publisher agreed not to press his account for whatever space the merchant used until there had been an opportunity to "cash in" on the publicity.

The embryo hardwareman decided to "splurge." He used a half page. It sold so many sauce pans and tea kettles and preserving pans and nutmeg graters that rush repeat orders were sent off by the next mail and the publisher heard the good tidings that his patience would not be strained.

The next step was to make his line of household supplies absolutely complete. He took on some fancy lines as well—brass goods, a little crockery and some glass ware. Then he worked into washing machines, wringers, carpet sweepers, etc. Almost by imperceptible degrees he took on line after line. One bright day he made up his mind to handle paint. It was the demand for specialties, wall tints, floor wax, etc., that got him started here. To-day he has a complete hardware stock, is making a good profit and is rated well.

The point of it all is this: The household goods department was the foundation on which was built a flourishing business. By concentrating on that department the hardwareman can build up his business in other directions and improve his hold on his community. He wins the ear of the housewife who is the buying power.

Looked at from this standpoint the household goods department assumes an added importance. It appears not only as a profitable field in itself but as a lever to bring bigger business in other departments.

HARDWARE & METAL
CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVIII. TORONTO, OCTOBER 7, 1916 No. 41

PRICES STILL SOARING

A READING of the market reports elsewhere in this issue will furnish an idea of how hardware prices continue to soar. A few months ago it was expected that by the end of the present year a general decline in prices would have set in. At present there is no indication of lower prices. Six months ago many people were predicting that the war would be over before the end of the year. Views have changed somewhat since then, and at least another year, or possibly two years, it is thought, will pass before hostilities have ceased. As long as the war continues and the demand for munitions continues, there will be no great reduction in prices. Scarcity of raw materials and labor have greatly aggravated the situation and have helped to force prices upwards. Manufacturers are falling away behind in deliveries. With an insistent demand for Fall goods, many jobbers' stocks are becoming depleted of certain lines with little hope of replacement for some months to come. Even after the war is over, there is likely to be a period of high prices on steel goods. The leading article in last week's issue of HARDWARE AND METAL went into this phase of the situation in detail.

OUTLOOK IN THE WEST

A WINNIPEG hardware jobber says that, to take a look at the orders coming in by mail, one would be surprised, especially after reading the unfavorable crop reports of the past few weeks. From these orders he gathers that conditions in some districts are bad, but generally speaking, the outlook in Western Canada is good for the coming Winter.

There is considerable money in the West, and there has been all year, owing to the railways handling last year's crop right up to the present moment. The high price of grain to-day will go a long way towards making things much better than they would have been considering the partial crop failure in Manitoba.

A large volume of business is coming in from Alberta and Saskatchewan. Dealers are buying freely of all seasonable goods, especially stoves. This is an unusual year for the latter, and dealers apparently are not content to wait for the traveler. Those merchants who have been reading their trade paper know that manufacturers are having difficulty making deliveries. Their trouble is lack of labor. Because of this, and most dealers know it, when new stocks are placed on the market, they will be from ten to fifteen per cent. higher than they were a year ago.

Orders for Christmas goods are beginning to come in. Business in sporting goods generally is only fair. The demand for building supplies has been good all year from the country, but not from the cities. Considering the state of the building trade generally, it is surprising to learn from a manufacturer of building paper that his sales are away ahead of last year.

In Western Canada collections are very satisfactory as far as hardware dealers are concerned. Many dealers are taking their cash discounts who never did so before. They have been doing more cash business during the past year, which is helping them out in districts where the crop suffered. Even in parts where they have been hailed out, dealers appear to have considerable money to spend.

LET US GIVE THANKS

AS a result of the combined efforts of the Moon and the Federal Government, Monday, October 9, has been declared Thanksgiving Day. On that day the mid-day feast will be of especial importance, and then, speaking in all seriousness, we will give thanks to Almighty God, for—well for what?

Canada is at war. As a nation we are engaged in the most destructive, most terribly consequential war of all time. At many Thanksgiving dinner tables there will be the vacant chair—the chair that in some cases will never again be wanted.

Those engaged in business have passed through a trying year, they have been beset with unprecedented difficulties. They have been face to face with problems for which the history of business offered no solution. They encountered entirely novel hindrances.

The harvest has been but fair and labor difficulties have proved a great handicap. The weather was not altogether kind either early or late, for sowing or harvesting, and in West and East the crops have been reduced.

What have we to be thankful for?

Well there is much.

Thankful we should be, and are, that Canadian men have proved their worth at the unaccustomed tasks of war; that they have in such large numbers seen the gleam and followed it unafraid.

Thankful we may well be for the pride in the sorrow of those who mourn.

Thankful as business men we may be for the prosperity which this virile country has enjoyed, and prouder for the spirit of undismay in which unaccustomed problems have been faced—yes and to a large degree mastered.

Thankful we may be for the goodly revenue which the crops will bring, ensuring further plenty for all; and thankful most of all for the desire to serve evidenced on every hand.

Let us give thanks to Almighty God!

Cardwriting Made Easy

by R.T.D. Edwards

Lesson 21.

PAYZANT PEN WORK

TO the professional cardwriter the art of proper pen lettering presents numerous features of interest and many difficulties that do not occur or appeal to the uninitiated. This art has gradually become one of the most important branches in cardwriters' work. Consequently cardwriters who wish to do up-to-date work should also keep up-to-date in the different devices for lettering, providing those devices are practical.

The Payzant pen, while not one of the latest cardwriting tools, is one of the most practical pens for lettering with black ink. With it you can develop a speed and an accuracy, in small black lettering, never before known to the cardwriter.

A study of the accompanying illustration (Fig. I.) shows the lower part of the pen. It consists of four parts—the pen, the reservoir, set screw and handle. The first three are made from brass and the latter from wood.

This pen was first invented and used for mechanical drawing purposes, but its usefulness for show card lettering being discovered, it has become more of a cardwriting tool than for the purpose it was originally intended.

The point of the pen is round like a wire and flat on the end. It is split up the centre, and through this passage the ink flows from the reservoir. To make a stroke the flat end is drawn along the surface of the card.

Cardwriters in the largest departmental stores in America use them with great success for very rapid lettering, and make a quick style of knock-out lettering with them. They also use them for very neat small upright lettering. Outline lettering can also be done with it with great success. Many varieties of letter formation can be made, as the accompanying illustrations shows. A cardwriter can work up many styles of lettering of his own with this pen.

With the round writing pen, which was taken up in a previous lesson, you can make small, very neat Roman lettering, but with the Payzant pen you can make just a neat small block letter.

The Payzant pen is made in six different sizes, but an assortment of three sizes is plenty for the best cardwriter. Extra large sizes are made, but are not advisable.

Keep Pens Clean

In order that the best results may be obtainable, it is absolutely necessary that the pens be kept perfectly clean at all times. The ink when left in the pen dries and causes the ink passage to become blocked up, and the result is an uneven flow of ink. Do not put the pen away without first opening the reservoir, rinsing in clean water and drawing a sheet of paper through ink passage. Do this with set screw loosened. This removes anything which may tend to harden and stop the flow of ink. If you dip the pen in benzine occasionally it will cut any hard substances that often form.

How to Letter

As soon as you have experimented with the pen enough to be able to make it mark, start at practice work. Hold it the same as you would a brush, between the thumb and first and second finger. Keep the flat end of the pen squarely on the card at all times while drawing strokes. Remember no fine spurred letters can be made with this pen, so don't expect it. Keep the pen stiff in the fingers. Don't allow it to roll as you do a brush. It must be held rigid. Draw the strokes fairly quickly, having all guide lines and layout ready before starting. One of the features of this pen is that you can work for quite a while with only one filling of ink.

Ink

Care must be taken to keep the ink perfectly clean. No matter how good the ink is, a sediment will form if it is allowed to stand. This is especially true if dust gets into it. The vessel the ink is kept in should be covered while not in use. If ink becomes dirty, strain through two or three thicknesses of cheese cloth. The best ink to use is a good carbon black ink, not necessarily the most expensive grade. A medium ink very often flows better, because it is not so thick.

The manufacturer advises the use of an ink dropper to fill the reservoir and not to put more than two drops in at one time. This may work all right, but if a cardwriter is busy, he cannot afford to wait to fill the pen with a dropper. It has been used successfully by experienced cardwriters by dipping in the ink well. Do not fill too full or the ink will drop on the card from the pen.

The Chart

In the chart this month we have many different forms of lettering made with the Payzant free hand lettering pen. These are only a few of the many varieties that can be worked up. You will notice that the first two full alphabets and numerals are of practically the same formations, with the exception that the first is slanting to the right and the second is straight up and down. Of course, with the slant type you can obtain greater speed, and it should be used on what is termed "rush" or "knock-out" work. Cards that have to be done in a hurry and that probably won't be up for more than a day or two can be done with this form, but if you want a better appearing card, one that is to remain up for a more extended period, it is advisable to use the upright type. Either of these alphabets can be used for small or large cards; in fact, in large stores quarter sheets are lettered with no larger letters than these, from half to three-quarters of an inch in height. The lettering is not as heavy or prominent as outline or heavy brush stroke lettering, but it makes an exceedingly smart and attractive card, especially when hundreds are used throughout the store and uniformity and neatness are the first things to be considered.

These letters and numerals are all made with the one stroke method. That is, one stroke of the pen completes one stroke. No second time over to make it heavier. If you want a heavier letter use a larger pen. The strokes are all drawn pretty much in the same manner as in brush stroke lettering, namely from left to right, and from top to bottom. This rule, with few exceptions, holds good. An exception to this rule

is the "O." This letter can be made with one continuous stroke, starting at the top and ending at the top. This takes more practice, but gives a better formed letter. "C," "J," and "S," are also letters that can be made with one stroke of the pen; with the brush it takes two or more strokes.

One of the most important points about the formation of these letters is to have all lettering at the same angle. In case of the first alphabet, all the main down strokes must slope at the same angle or the word will not appear connected.

As was said before, a fine spurred letter cannot be made with this pen on account of its bluntness, but a heavily spurred letter can be made with good success as shown on the chart.

The words "Heavy Spurred Egyptian," shows what is termed a light faced Egyptian. This is formed after the same style as the alphabet above it, but it has the heavy spurs added. This, in my estimation, is a great improvement, but of course it takes more time to execute. This form is a favorite with many cardwriters for the better class of work.

Outline Letters

For making outline letters and figures, this pen is excellent. A glance at the chart shows three distinct types, which were outlined with this pen. The first shows a spurless Roman letter. This type is especially adapted for emphasizing words on a card.

For outline script lettering, this pen is also valuable. It slides so easily over the surface of the card that a free and easy swing to the lettering is obtained.

The bottom line shows a form of lettering which takes some time to make, style of letter on a card unless it is to but is very effective. Don't use this remain up for a considerable period. It does not pay to spend the time on it if it is to be only used for a short period.

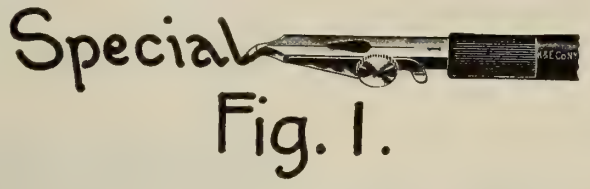


Fig. 1.

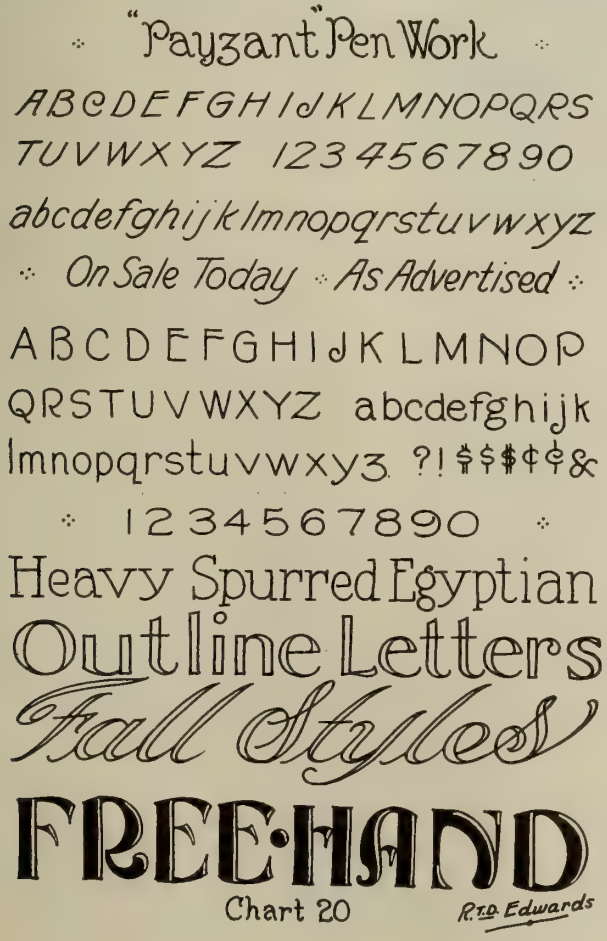
Fill in outline letter with small brush and cardwriters' black.

Practice Work



In Fig. 2 is shown a collection of single strokes which give you an idea of how to proceed to practice. Draw upper and lower guide lines and pick out a stroke in the chart and practise it until perfect before proceeding to the next. Don't purposely avoid the ones that are hard to make; those are the ones that you should spend most time at.

The Payzant, besides being good for making large showcards, is excellent for making small price cards.

The complete showcards give excellent examples of what can be done with this pen. All the black work on the cards is the work of the pen except where a brush was used to fill in an outline letter. Special attention to the fancy borders which are shown. These are entirely the work of this pen. The grey color used is applied with a brush. Many varieties of fancy borders can be originated.

FREIGHT EMBARGO HAS BEEN LIFTED

The freight embargo against the acceptance of less than a carload from Niagara Falls to Toronto, has been lifted. The embargo, which has been in operation several weeks, was necessary on account of congestion at Toronto. The news will be welcomed by business firms in the city, who have been considerably handicapped as a result of the restriction.

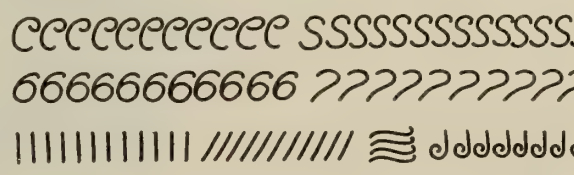


Fig. 2.

Good Time To Shorten Credit Terms?

Canadian Credit Men Favor Short-Term Plan—Claim it Has Decreased Business Failures in 1915.

THE officials of the Canadian Credit Men's Association believe that the present is an opportune time for the shortening of credit terms. The matter is one that has been discussed on many occasions by the credit men.

The matter was again brought to the front by T. D'Arcy McGee, vice-president Credit Men's Association, at a recent meeting held at Winnipeg. Mr. McGee referred to the subject as follows:—

Prompt Payers Get the Goods First

"In the matter of general shortening of credit terms. For years we have been trying to get away from the long crediдt terms, which were a bugbear to every wholesale house. They were largely responsible for the abnormal amount of failures in 1914-1915. The decrease in failures in 1916 can be largely accounted for by the general shortening of credits and, of course, the enormous crop of last year has greatly helped to bring this about, and our files in the Adjustment Bureau are ample evidence of the good effects. We feel that the present is an opportune time for arriving at some definite understanding among the wholesale and retail trade for the general shortening of credit terms. The abnormal conditions created by the war, causing a great shortage in material and labor, has resulted in forcing the manufacturers, wholesalers and retailers closer to a cash basis, and we know from our own experience that the present shortage in the various lines we are handling, means that the man whose account is in good shape and who takes his discount, is the one who gets his goods first, and after that, accounts are graded in order of merit. The retailer has, and is taking the same position with his customer."

Paint manufacturers recently changed their credit terms, and the shortened terms became effective October 1. The matter is now receiving the attention of other branches of the hardware trade.

To Make Half-Holiday Compulsory

Effort Being Made in Alberta to Pass Law Similar to That in British Columbia

IN response to a widely-expressed wish a campaign is being prepared by Secretary W. H. Andrews, of the Alberta Retail Merchants' Association, for a provincial weekly half-holiday, based somewhat on the lines of the British Columbia Act, which was passed in June last. The Calgary by-law, which was passed in July, of course, only affects Calgary, although the provincial law as it stands now gives any municipality the right to make a by-law on petition to two-thirds of the merchants affected. The movement now on foot is to make it compulsory to have one half-day a week as a holiday all the year round.

The British Columbia Act gives the municipalities the power to choose their own day by a vote of the electors, but in the cases of Vancouver, Victoria and New Westminster, they had to choose either Saturday or Wednesday, and Saturday was chosen in every case by a large majority.

An Act something similar will be aimed at by the Alberta merchants, making it compulsory for stores to close one afternoon during the week, the afternoon to be fixed by the municipalities, the same as in British Columbia. It is most likely that the day chosen for the half-holiday in the cities will be Wednesday and not Saturday, as in Vancouver, New Westminster and Victoria. The only difference the passing of such an Act would make to Calgary would be that the half-holiday would be extended to all the year round instead of just the three summer months. Anyway, it is most likely that the Calgary merchants will petition next spring to have the holiday for six months instead of three. The butchers are already talking of closing voluntarily on Wednesday afternoons during the entire year, commencing Jan. 1, 1917, but, of course, a law to this effect would be far more satisfactory, as there are always some merchants who make a point of breaking away from voluntary agreements, and one merchant such as this very often prevents the making of an arrangement that would be greatly beneficial to the trade as a whole if everyone agreed to it.

With regard to the uniform closing by-law in Calgary, while this might be looked upon as a big success, there is considerable disappointment among the hardwaremen and grocers with reference to the enforcement, or rather non-enforcement of it. There are three or four stores opposed to closing at 6.30 p.m. during the week and 10.30 on Saturdays, and they keep open after these hours in defiance of by-law. The police, who are admittedly not very much in sympathy with the by-law, have not been very energetic in seeing that the stores close at these hours, although their attention has been repeatedly called to the fact. They admit that it is up to them to enforce the law, regardless of whether they think it is fair or not, but the fact remains that it is not being enforced and is consequently unfair to those stores that do close.

A delegation from the Retail Merchants' Association interviewed the police this week and received a promise that something would be done, and the merchants are waiting to see if this promise is kept, and if not, something further will have to be done.

A by-law is not of much use if not enforced, and having gone to such enormous trouble and expense to have the by-law put through, the R. M. A. naturally feels very keenly about the poor manner in which it is being enforced.

STOVES IN BRISK DEMAND

(Continued from page 37.)

before buying are sound lines for the retailer.

Window displays in which stoves feature should follow the line of concentration on a few stoves rather than dispersing the interest of the possible customer. It is advisable in making any stove display to be sure that easy access can be had to any part of the stove, so that it does not pay to place the store's only example of some specially good selling stove in the window where a customer cannot walk round it and take off the lids, etc.

Retailers as a rule buy rapidly in hand-to-mouth orders in spring and fall, so that manufacturers are usually rushed hard to effect deliveries at these buying seasons for stoves. While large stocks of stoves are kept ready for swift shipment, each stove has to be mounted with its nickel-plating, etc., before shipping, so of necessity a couple of days or more must elapse before an order can be shipped. This is a point in retail stove supply to order which guides in promising delivery to the customer.

Canadian Expeditionary Force

A lover of a good nag, C. C. Ballantyne, or the Sherwin-Williams Company of Canada, Montreal, always drove to work behind a first-class steed. The exigencies of the service now call for more speed, and Lt.-Col. Ballantyne, commanding the 245th Battalion, Grenadier Guards, may now be seen calling at the various recruiting stations in an automobile emblazoned with the inspiring letters, C. E. F.

EVENTS IN THE TRADE

Business Changes

Toronto, Ont.—F. H. Stuart has been succeeded by R. J. Cole.

Morinville, Alta.—Morinville store has sold the hardware stock to T. A. Knudson.

Meeting of Association.

The Hardware Association (Canadian) met in Montreal on October 5, a great deal of important business being before the members.

New Industry for Wetaskiwin

The firm of Wagner & Knippel, Wetaskiwin, Alta., recently completed arrangements for the manufacture and sale of clothes reels, in addition to their general blacksmith trade. They also intend to manufacture water carts of different sizes.

Opened Branch Store

Red Deer, Alta.—The Day Hardware Company, who succeeded Smith & Gaetz about a year ago, are opening a branch at Innisfail, Alta. This branch will be under the management of D. A. Smith, who was for seven years with the original firm.

Killed in Action

Lance-Corporal William MacLurg, who has been killed in action, was the eldest of the three sons of Rev. A. MacLurg, Toronto. He was employed by the Gutta Percha Rubber Company before he enlisted in the 4th University Company, which went overseas to reinforce Princess Patricia's Canadian Light Infantry.

Meeting Thanksgiving Day.

A meeting of the Advisory Board Ontario Retail Hardware and Stove Dealers Association will be held at the Queen's Hotel, Toronto, on Monday, Oct. 9. Several matters pertaining to the Association will be taken up. It is also expected that a deputation from the Canadian Hardware Exhibitors will hold a conference with officials of the Retailers' Association.

Ottawa Paint Works, Ltd., Incorporated

The Ottawa Paint Works, Ottawa, Ont., hitherto a partnership, has been incorporated, and from now on will be known as Ottawa Paint Works, Ltd.

At the same time, we have assimilated the stock and assets of the Ottawa Varnish Company, which up to the present has been carried on as a separate concern, although controlled by the partners of the Ottawa Paint Works.

G. REGINALD MARSHALL,

who has recently passed his examination for the Royal Naval Air Service, after ten weeks spent in training at the Curtiss Aviation School, Long Branch, Toronto. He will sail for England in a few days. Mr. Marshall is known to many in the hardware trade. He has been for some time associated with his father, Geo. A. Marshall, 70 Lombard St., Toronto, representing a number of well known Sheffield manufacturers. The above snapshot was taken after Aviator Marshall had descended from a flight in the neighborhood of Toronto. A portion of the aeroplane may be seen in the picture.

Personal.

A. L. Fitzgerald, of the Merrick-Anderson Co., Winnipeg, is on his vacation.

P. Sigurdson, of Icelandic River, Man., recently returned home from a buying trip to Winnipeg.

T. B. Williamson, buyer for H. S. Howland & Sons, Toronto, has returned from a trip to New York.

James Hardy, of Jenkins and Hardy, Toronto, was in Montreal this week attending the Hardware Association Meeting.

Robert Keith Gerrard, formerly in the employ of the Marshall Wells Co., Winnipeg, is reported wounded at the Front.

Hon. Sir Lyman Melvin Jones, president and general manager of the Massey Harris Company is making his annual tour of Massey Harris branches in Western Canada, accompanied by a party of directors of the firm and some eastern business men.

Captain Frank Ross Newman, reported in October 2 casualty lists, was manager of the Canadian Fairbanks-Morse Co., when war was declared. His father, the late Thomas H. Newman, was a member of the firm of Caverhill, Learmont & Co., wholesale hardware merchants, 89 St. Peter Street, Montreal.

E. Fielding of E. Fielding & Sons, oils and turpentines had the misfortune to be injured by being struck by an automobile at the corner of Jarvis and Earl Streets in Toronto. He is now confined to his home and it is expected that several weeks will elapse before he is able to attend to business.

Curent news

Ontario Incorporations

Ontario Toys, Ltd., capitalized at $50,000, head office, Toronto, to manufacture and deal in dolls, toys, novelties, etc.

Canadian Wood Products, Ltd., has been incorporated at Toronto, with a capital of $40,000, to manufacture wood products of all kinds, with head office at Toronto.

Brunner Mond Canada, Ltd., has been incorporated at Ottawa with a capital of $3,000,000, to manufacture soda ash, caustic soda and other chemicals. Head office in Toronto.

The Dodge Metal Hose Co. of Canada, has been incorporated at Ottawa, with a capital of $150,000, to manufacture metal hose, couplings and connections. Head office at Toronto.

The Tip-It Welding Co. has been incorporated at Ottawa with a capital of $20,000 to manufacture all kinds of engineers' hardware, contractors', build-

ers' and machinists' supplies at Montreal.

Charles Jackson & Sons, with incorporation in Great Britain, has been granted a license to carry on business as manufacturers of linoleum, floor cloth and similar materials, in the Province of Ontario, with a capital not to exceed $40,000.

The Panther Rubber Co. has been incorporated at Ottawa, with a capital of $100,000, to take over the Canadian business of the Panther Rubber Co., of Stoughton, Mass., and to manufacture rubber goods of all kinds. The head office is at Sherbrooke, Que.

INDUSTRIAL NOTES

Goderich, Ont.—The Doty Engine Co. has changed its name to that of the Britannic Engine Co.

Hamilton, Ont.—The Dominion Steel Castings Co. will build a factory here to cost about $75,000.

Hamilton, Ont.—The Dominion Steel Foundry Co. propose making further additions to their plant to take care of the increase in business.

Hamilton, Ont.—A permit has been issued to the Canadian Steel and Wire Goods Co., for erection of addition to factory at a cost of $1,500.

St. Thomas, Ont.—A. F. Voege, manager of the Canadian Woodenware Co., whose plant was destroyed by fire recently, will rebuild at once.

Niagara Falls, Ont.—Fire of an unknown origin broke out on Sept. 24 in the Dominion Chain Co.'s factory and caused damage to the extent of about $500.

Toronto, Ont.—The city architect has issued to the Russell Motor Car Co. a permit to erect machine shops on Dufferin street, corner of Liberty, to cost $40,000.

Belleville, Ont.—The Maple Leaf Tires, Ltd., have commenced the erection of a factory, estimated to cost $100,000. The president is H. C. Long, Toronto.

Quebec, Que.—The International Paper Co. are building an addition to their mill at Donnacona, near here. A paper making machine is being installed at a cost of about $150,000.

Montreal Que. — The Dominion Bridge Co. has been awarded the contract for 3,000 tons of steel shapes for the International Nickel Co. plant, which will be erected at Port Colborne, Ont.

NEW ASBESTOS WAREHOUSE

At their wharf on the waterfront, Montreal, Messrs. Turner Bros (Canada), Ltd., have just completed the construction of a large new warehouse for storage of their heavy asbestos goods, such as fibres, cement, shingles, and asbestos lumber. The shed itself is built of asbestos lumber, and is 400 feet long by 70 feet wide, erected of lumber in sections 8 feet x 4 feet and ¼-inch thick. It is, of course, absolutely fireproof. Asbestos as a building material is coming to the front, and many new uses for it are being discovered and the corresponding demand filled through enterprising hardware merchants.

WELL KNOWN HARDWAREMAN DIES.

George T. Jenkins, for 32 years stockkeeper with H. S. Howland, Sons & Co., Toronto, died in the General Hospital on Friday, September 29, after an illness extending over several months. The funeral took place on Monday. Mr. Jenkins was born in London, England, 72 years ago. He came to Canada about

O. W. ROLPH,

Representing Beatty Bros., Ltd., east of Toronto.

50 years ago and has been identified with the hardware trade all that time. Prior to his connection with the H. S. Howland Company, Mr. Jenkins was with the McGiverin Company of Hamilton and came to Toronto when that firm removed to this city and was established under the name of McGiverin & Kerrigan. This latter company was purchased by H. S. Howland and Mr. Jenkins continued his connection with the concern. Mr. Jenkins was a bachelor. He was a member of New St. Andrews Presbyterian Church where he had been an usher for the past five years. He also took a great interest in the work of the House of Industry, being one of the valued volunteer workers of that institution, among the poor. He was a man very highly esteemed for his kindly disposition and genial nature and had many friends. He was particularly well known among the manufacturers with whom he came in contact intimately in his position with the Howland Company.

CATALOGUES AND BOOKLETS

Issues New List Prices

The Meriden Britannia Company, of Hamilton, Ont., have recently issued a circular and catalogue, showing new list prices covering their entire line. In conjunction with this is re-issued the previous catalogue, with suggested prices to consumer plainly stated.

Retailer Issues Catalog

A handy and comprehensive list of hardware goods with illustrations and prices, and a hang up loop to encourage the preservation of the list has been issued by A. R. A'Bear of Fairmount Ave., Montreal. This is rather a new departure in the retail hardware business, and looks like a useful business-getter. Encouraging philosophy in the form of verses and aphorisms with here and there a funny story, feature throughout the catalogue.

"How a Boy Made the First Remington."

The centenary of the making of the first Remington rifle by Eliphalet Remington, the twenty-three-year-old son of a farmer-blacksmith, in his father's smithy, near what is now the village of Ilion, New York State, offered an exceptional opportunity for the Remington Arms Union Metallic Cartridge Company, New York, to demonstrate the romantic side of business activity. The company have issued, in the unique form of a narrative written by Irving Crump, a widely known juvenile writer, this story of Remington arms. Mr. Crump is the author of a number of other books. The book, "How a Boy Made the First Remington," is virtually an entertaining story and catalogue in one. It tells graphically the struggles of young Remington to obtain a rifle, and how, after overcoming many obstacles, he finally made one himself and unknowingly established what has ultimately become an arms and ammunition business of gigantic proportions. The use and care of firearms, the pleasure to be derived from hunting and marksmanship, the delights of clean, competitive sport in the outdoors—all are treated in "boy" language in narrative form. It will be mailed post free for the asking.

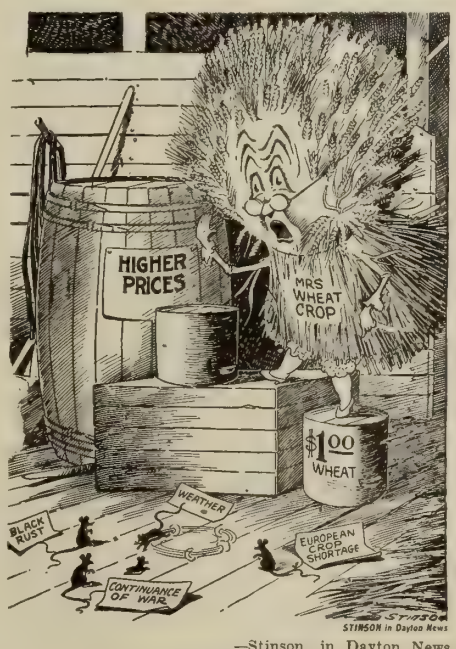
WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

Several of the most important changes for a number of weeks past have occurred this week. Advances in price have been recorded on spades and shovels, nail hammers, padlocks, wrenches, taps, dies, stocks, cast hollowware, cap screws, cotton rope, oil and sharpening stones, perfection oil stoves, brass wire, rifles, black and galvanized pipe, lead pipe, tinned iron, snow shovels, cotton twine, rules, planes, brass wire. A series of phenomenal advances have taken place during the week on linseed oil following unfavorable reports from Argentine, inquiries from the United States and uncertainty regarding the Canadian crop. There is an insistent demand for iron and steel and deliveries are again falling behind. A revision of prices is again under way and new prices being issued show advances of about 15c per 100 lbs. over those previously in effect. There is a brisk demand for all hardware lines. Stocks of certain lines of goods are becoming depleted and chances for immediate replacement are very remote. Quotations on all paints are very firm, and the recent advances in linseed oil will create a tendency towards even higher prices.

MONTREAL MARKETS



MONTREAL, Oct. 4.—There has been a considerable revival of small business in hardware and metal during the past week or so. This is in line with the usual state of affairs in business for the time of year. Business is reported brisk, especially in the country districts, where demand for many lines of hardware is good. The linseed oil situation has been noticed by the hardware trade also, with a great firming of prices. In three days linseed oil leapt 11c, from 94c to $1.05, and the market for this is still very firm. Shortage of iron plate makes a big shortage of many sizes of washers apparent. Screws in certain sizes are scarce, and the general difficulty as regards steel is very marked indeed. Many important price changes have taken place this week.

Metal Markets are Firmer

Copper remains very firm at 32½c to 33c, and has risen since last week. Lead is very firm also at $9.50 to $9.75. Sheet zinc is unchanged at 26c to 27c. Tin is again firmer at $46 to $46.50. Spelter is in a weaker market at 16c to 16½c. Antimony steady at 15c, and tinsmiths' solder firmer, but at 29c, as last week, while wiping solder is also firmer at 26c. A noticeable condition of the market was the movement of prices in odds and ends, rather than in main lines, but iron pipe is up further, as will be noticed elsewhere.

Delivery is the Thing in Steel

STEEL.—With demand greater than ever for steel and steel products, and the market in such a condition as regards supply and deliveries as to make quotation of prices a task for a diviner, the situation is interesting, if altogether too erratic for hard business instincts to delight in. "Much bigger business could be done in steel if we could get delivery" declared one prominent man in the market for heavy metals. "It is not so much a matter of price now as of delivery. Price cuts a small figure. Delivery is the chief thing. If we could get delivery, we could sell steel at almost any price."

—Stinson, in Dayton News.
CLIMBING.

Iron Pipe is Up a Further Notch

Both Black and Galvanized Qualities Show the Upward Trend in the Trade

IRON PIPE.—Both black and galvanized iron pipe are up in price for all sizes from ¼-inch to 4 inches. The increased prices are in line with the general upward trend of the market, and are the second increase in a few weeks. The new net prices are shown in a panel on page 47. Pipe nipples also firmed up in price to 70 per cent. off for sizes up to 4 inches, and 65 per cent. off for 4½ inches and upwards.

Tin and Terne Plates Demanded

United States Buyers Ready to Pay Top Prices Plus Duty for British Product

TIN AND TERNE PLATE.—Great scarcity of tinplate and charcoal terne plate exists on the markets at present, and there has been during the past week a very pronounced inquiry from the United States for these commodities. Several large American orders have been filled from Montreal. One large Montreal firm is not only shipping more of these plates to the States than ever before in trade experience, but is also sending them over far wider territory, from Vermont to Ohio, in fact. Prices in Canada are firmer in consequence, though unchanged from last week's current quotations.

Shelf Hardware Goes Firmer Yet

Many Lines Take Upward Trend in Prices This Week

SHELF HARDWARE.—Many lines of shelf hardware are this week affected by the general rising tendency of the market for steel and allied metal products. The predicted rise in price of American padlocks has taken place. HARDWARE AND METAL indicated this tendency some weeks ago. The new

lists show increases in price, ranging from 5 per cent. to higher percentages not easy to calculate for all lines of imported padlocks. New prices are coming out for all Stanley goods, rules, planes, etc., and the increase will run from 5 per cent. to 10 per cent. Maydole nail hammers are up 10 per cent. Coe's knife-handle wrenches are up 10 per cent. also. All Butterfield goods are also altered in price in the general upward direction, stocks and dies, blacksmiths' taps, shell reamers, stove bolt taps, and machine screw taps being principally affected, as noted here:—

Stocks and dies, sizes 0-3 and 4, 50 per cent. off list.

Machine screw taps up to No. 12, no change; No. 14 and larger, 50 per cent. off list.

Shell reamers, 10 per cent. discount.

Blacksmiths' taper taps (each), ¼, 45c; 5/16, 50c; ⅜, 55c; 7/16, 60c; ½, 70c; 9/16, 80c; ⅝, 90c; ¾, $1.20; ⅞, $1.60; 1 in., $2; 1⅛, $2.25; 1¼, $2 60; 1½, $3.50.

Hand taps are changed a little; 1/16, 70c; 5/64, 60c; 3/32, 50c; 7/64, 40c; other sizes unchanged.

Machine screw taps from 1 to 4, 70-40, with 10c variation on each number; 5 to 12, all 35c each; 14 and 16, 45c; 18 and 20, 50c; 22, 24, and 26, 55c; 28 and 30, 60c each list.

Stove bolt taps alter to 5/32s, 35c; 3/16, 35c; 7/32s, 35c; ¼, 45c; 5/16, 50c; and ⅜, 55c each.

Cast Hollow-Ware is Up in Price

Imported Pots and Pans, Glue Pots, Cauldrons, etc., Higher

HOLLOW WARE. — All imported cast metal hollow-ware has gone up in price this week by 10 per cent. This includes saucepans, both round and oval, large and small, glue pots, melting pots, and domestic ware of this class generally. Stamped and enamelled ware has not increased, and demand for these popular articles of similar utility to the cast hollow ware may be slightly increased, where cast hollow ware was previously used, but many firms do not handle cast hollow ware, and some since the war have ceased to import it.

Lead Pipe Goes Up in Price

Traps and Bends So Far Unchanged, But Market Very Firm

LEAD PIPE.—The very firm state of the market for lead has had its effect after some delay upon the manufactured product, lead pipe being increased in price this week to 13c on coils, and 14c on cut lengths per lb. Traps and bends in lead pipe remained unchanged, but with cost of lead and of labor firming up steadily, changes may later affect these also.

Band Steel and Valves Down

MISCELLANEOUS.—Two of the anomalies of the hardware market were noticed in Montreal this week when band steel, which by every law of the market for steel should have gone upwards, was quoted a shade easier at $3.20, when last week's quotations were $3.30 for this.

Globe Valves Down

The other item is that of Jenkin's genuine globe valves (brass), now listed at 27 per cent. off, where last week these were 25 per cent. off.

Tinned iron shows the usual upward trend, being quoted now at $15.50 instead of $14.25, and snow shovels are at 30 off list, where they used to be 35 off.

Cap screws are 50 per cent. off, where they were formerly 55 per cent. off, but

New Prices on Spades and Shovels

Two weeks ago Hardware and Metal announced an advance of 10% in the price of American spades and shovels, etc., and stated that if precedents counted for anything advances were not improbable here. Advanced prices have gone into effect and discount lists and net prices are given herewith. All prices and discounts are subject to change without notice:

SPADES AND SHOVELS.

For Province of Ontario (East of but not including Port Arthur), Province of Quebec, and Maritime Provinces.

	1st Grade	2nd Grade	4th Grade
Shovels	45%	40%	20 and 7½%
Draining Tools	45%	45%	.....
Hollow Back Scoops	30 and 10%	....	20/10 and 5%
Hollow Backs, Sand Shovels & Coal Shovels	45%	....	20 and 7½%
Riveted Back Scoops	35%	35%	35%
Jones Miners Spring Point Riveted Shovels, List Nos. 42 and 43	35%		

Above discounts apply whether goods are sold in carloads or less than carloads.

The above discounts apply only to Black List; Black List prices being as follows:

BLACK LIST PRICES.

	——Per Dozen——

set screws are now 55 per cent. off, where they used to be 50 per cent.

Cotton Rope and Twine Firmer

COTTON TWINE.—Cotton rope and cotton wrapping twine are in a steadily firming market at present, the price for wrapping twine quoted now being 36c per lb. on an average. Three-ply could be had at 34c and 4-ply was 38c. All sizes of cotton rope were reported up about 2c more per lb.

Spades and Shovels Higher

Spades and shovels have advanced, as predicted by HARDWARE AND METAL two weeks ago. The advances range from 5 to 7½ per cent., and are shown in a panel elsewhere in this issue.

TORONTO MARKETS

TORONTO, Oct. 5.—Prices of hardware are still soaring upwards. A large number of important price changes have gone into effect this week, and further changes are expected.

Insistent Demand For Steel

There is no sign of any break in the extraordinary activity which prevails in the steel trade, and indications point to a continuance of present conditions for an indefinite period. There is no improvement in the situation as regards the scarcity of steel, the demand is exceeding the supply to a greater degree than at any other period in the history of the trade. Although the mills are operating at capacity, they are unable to keep pace with the requirements for munitions and general purposes, and are getting further behind all the time on deliveries.

The serious shortage in steel rails, which has developed, is due to the war, as those steel mills, with the one exception, which have rail mills, are engaged in producing shell steel and are not taking orders for rails.

The urgent demand for steel for munitions preludes the possibility of much improvement in the situation, in the meantime, although the proposed remission of the tariff duties to permit rails coming in from the United States may help matters. Whether this will give the desired relief is uncertain, as the mills in that country are congested, and may not be able to make satisfactory deliveries.

The markets continue very firm and all prices have an upward tendency.

The metal markets generally are firmer, but prices are unchanged, with the exception of copper, which has advanced.

Copper Advances

The market is strong and active, following the big order placed in the States by the Allies. The order represents three months' output, and is by far the largest of its kind ever closed. Delivery is to be made over the first six months of 1917, and the price is stated to be between 26c and 27c. The new contract, following on reports of the sold out condition of the producers emphasizes the broad extension of current activity. As the buying of copper for domestic account continues heavy, the fact that a quarter of the 1917 output of the American copper producers is bespoken in one block postpones the date at which new orders for home account can be filled well on to the end of the year. Copper has advanced 1c per pound, and is now quoted locally at 31c per pound.

WOOD SCREWS UP IN PRICE

Advices received as HARDWARE AND METAL was about to go to press, stated that an advance on bright and brass screws had gone into effect. Following are the new discounts:—

Flat head, bright	**77½%**
Oval and round head, bright	**72½%**
Flat head, brass	**45%**
Oval and round head, brass	**42½%**
Flat head, bronze	**37½%**
Oval and round head, bronze	**35%**

This advance has been forecasted by HARDWARE AND METAL several times during the past few weeks.

Tin Firmer

The market is firmer, with quotations well maintained, due to increased demand. London market has advanced and New York is also slightly higher, but to local quotations are unchanged at 44c per pound.

Spelter Steady

The market has improved on large buying recently, and is now firmer, although quotations are unchanged. It is expected that the recent large order for copper will eventually benefit the spelter market, which might result in higher prices. Local prices, 12c per pound.

Lead Firm

The market is firm and fairly active at unchanged prices, the Trust figure still being 7c New York. The lead situation is a strong one, and will possibly remain so for the remainder of the year. Local quotation, 9¼c per pound.

Antimony Dull

Quotations are unchanged and nominal, and the market continues dull. Local price, 18c per pound.

Aluminum Steady

Sellers report good demand, and the market holds steady at 68c per pound.

Black and Galvanized Sheets

The market for galvanized sheets in the United States is considerably stronger and higher prices are anticipated, in which case an advance may be looked for in this market. The reason for the renewed strength is the unusually heavy demand, and also because of the continued high cost of black sheets. The demand for both black and blue annealed sheets is heavy, and the market is stronger. As sheet bars will be higher for fourth-quarter delivery, sheet prices will no doubt be advanced in the near future.

Prices are shown in the current quotations.

Dealers Still Have Trouble With Shipments

Business in all hardware lines has been exceptionally good during the past week. There is no relief in sight from higher prices. Merchants still experience the difficulty of getting prompt shipments through. Higher prices have had the effect of stimulating buying. Many merchants have been holding back but recently some have come to the conclusion that high prices are to be expected for some time to come. "Indications point to high prices until midsummer next at least," stated the manager of one of the large wholesale hardware houses to a HARDWARE AND METAL representative. "There is a big shortage of goods. There is no way out. Merchants placing their orders now may find themselves in a much better position for

delivery by spring. This is based on the assumption that the war will continue into next year, which seems very likely. If it ends sooner there will be much labor released but prices will not drop rapidly even in that event. Readjustments must necessarily be slow."

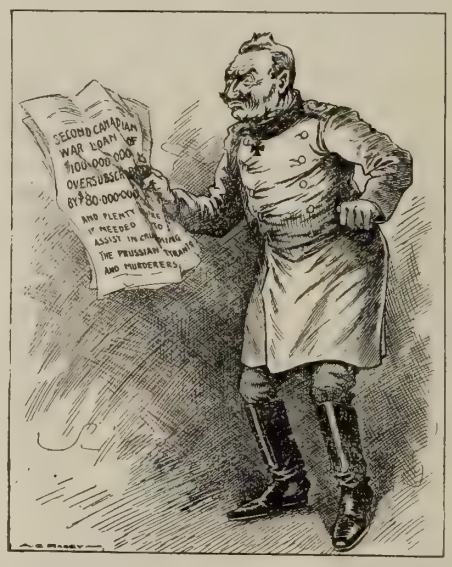
Iron and Steel Prices Make General Advance

An advance of 15c per 100 pounds went into effect during the week, making the price on bar iron now $3.40 base. Angles tees and channels will also be affected by this advance in price. Although at the time of going to press the prices had not been definitely fixed it is understood the new price that will prevail on angle iron will be $3.75 per 100 pounds base as compared with the former price of $3.50. On tees the new price will be $4 as compared with the old price of $3.75 per 100 pounds, while channels will be sold in all probability at the same price as tees. Sleigh shoe steel, tire steel, mild steel, band steel, domestic, reeled machinery, toe calk steel, mining tool steel, spring steel, sheet steel, black diamond and silver tool steel have all advanced approximately 15 per cent. Refined iron, horseshoe iron and Norway iron have all advanced to a base of $3.90. The former price was $3.50 base. These changes are quite sweeping and general in all lines of iron and steel.

Cotton Twine Goes Up 1c Per Pound

An advance of 1c per pound on 3-ply and 4-ply cotton wrapping twine went into effect this week. The prices for three-ply now range from 29c to 36c and on four-ply from 32c to 40c per pound. There has been a big demand for all cotton twines and this coupled with the uncertainty over the cotton crop in the southern United States has operated to cause a firmness in the market. There has also been a very good trade in hemp and jute twines, used in wrapping heavier parcels sent by express. Wholesalers have started shipping goods for the Christmas trade and this has caused heavier shipments by express. The trade in these lines of goods is most gratifying to twine manufacturers for this time of the year. Cordage prices hold firm with a fair demand for rope.

Spades and Shovels Advance in Price



The advance in spades and shovels that was forecast two week's ago in HARDWARE AND METAL has gone into effect and provides approximately for a 5 to 7½ per cent. increase in price. In addition to spades and shovels there are advances on socket scoops, break-down scoops, riveted scoops and crescent scoops. Advance in the cost of raw materials and the difficulty of the manufacturers to get right and sufficient help to do the work are given as the reason. The new prices and discounts are shown elsewhere in a panel, on page 46.

Wire Rope Advances.

An advance of 10 per cent. in the price of wire rope was recorded by wholesale hardware dealers during the week. This is in accordance with the firmness in the market in other lines of wire products. An advance on all wire products and wire nails is looked for.

Coppered Coat Hooks Up.

Three-inch coppered wire coat hooks are now selling at 75c per gross, which represents a substantial advance.

Chief war starter: Himmel and that's the country my spy system informed me was ripe for rebellion, ready for insurrection, and only awaited a chance to break from the British Empire.

—Racey, in Montreal Star.

Carborundum Goods All Up.

The prices on all lines of carborundum goods have all been advanced from 20 per cent. off list to 15 per cent. off list. The increase is general and makes provision for all lines.

Snow Shovels to Go Up.

At the time of going to press there was strong probability that the price of snow shovels would advance. A new resale price is expected in the near future.

Black and Galvanized Pipe Up 1 Per Cent.

An advance of 1 per cent. in black and galvanized iron pipe went into effect on October 2 from Coast to Coast. For points west of Fort William the price quoted in the net list is in car lots. There has also been an advance of 2½ per cent. in wrought iron nipples, the new discount for 4-inch and under being 70 per cent., 4½-inch and larger 65 per cent., while 4-inch and under wrought nipples with running thread carry a discount of 50 per cent. The net prices on pipe under the new list will be found in a panel elsewhere.

Higher Prices in Castor Oil Expected

With the coming of the winter season castor oil is expected to increase in price. It is now selling at 23c per pound in 40-lb. tins and 21c per pound in cases of four tins or 160 pounds. Castor oil is one of the oils that will not congeal in frosty weather and for this reason is used extensively by the artillery branch of the army. Last winter it sold as high as 45c per pound. It plays a most important part in modern warfare. It is stated on good authority that the Russians were driven out of Poland and lost Lemberg largely because their supplies of castor oil for their artillery played out. They used other kinds of oil and their cannon jammed which put them out of business effectually.

Advance in Tinware

A considerable advance is recorded this week in piece tinware by manufacturers. The discount has been changed from 17½ per cent. off list to 10 per cent. off list. Cast hollow-ware has also shared in the general advance of 5 per cent. made on all foundry goods.

Oil Stoves Go Up

There has been a general advance in all lines of Perfection oil stoves and heaters. Prices that now prevail are as follows:—Two-burner oil stove, $7.95; three-burner oil stove, $10.45; four-burner oil stove, $13.40; No. 37 Perfection fireless cooker, $33.40; No. 21G oven, $2.20; No. 22G oven, $2.75; No. 120 heater, $3.20; No. 125 heater, $3.05; No. 130, $3.45; No. 160, $5.70; No. 230, $4.80; No. 260, $7.05

Brass Screen Wire Advanced

Another advance is recorded this week in the price of brass screen wire. Nos. 12 and 14-gauge are now selling at 70c net; Nos. 15 and 16-gauge at 72c net; Nos. 17 and 18 at 73c net, and No. 20-gauge at 74c.

Snaring Wire Goes Up

There has been an advance in the price of brass snaring wire during the week. No. 22-gauge is now selling at 76c net, and No. 24-gauge at 83c per pound.

Stevens Rifles Price Changes

Prices on Stevens rifles have changed during the week, and are now quoted at the following prices:—No. 14½, $3.85

net; No. 26, $4.75 net; No. 12, $6.25 net; No. 17, $7.75 net; No. 19, $11.50 net; No. 44, $14 net.

Brass Wire Prices Increased

Manufacturers of brass wires have increased the price of their product. To the old lists there is added 40 per cent. for gauges Nos. 3 to 24, and 25 per cent. for gauges Nos. 25 to 36. Following is the current list price:—3-8 gauge, 46c per lb.; 9-11, 47c; 12-14, 48c; 15-16, 49c; 17-18, 50c; 19-20, 51c; 21-22, 52c; 23, 54c; 24, 56c; 25, 64c; 26, 70c.

LONDON MARKETS

LONDON, Ont., Oct. 5.—From the standpoint of price changes the week has been one of the most spectacular for some time past. A great many changes have taken place, indicating that there are no signs of a let-up in the upward trend of prices.

Business continues good, there is a brisk demand for stoves and stove accessories. Fall hardware lines are moving freely. Collections are good. The scarcity of many hardware lines is becoming more keenly felt as stocks become depleted and the fall demand becomes more insistent.

Spades and Shovels Go Higher

As predicted by HARDWARE AND METAL two weeks ago spades and shovels have advanced from 5 to 7½ per cent. A complete list of prices, discounts and net prices appear in a special table elsewhere in this issue. The advance here follows an advance of about 10 per cent. which took place in the United States about two or three weeks ago. The discounts briefly are 1sts, 45 per cent.; 2nds, 40 per cent; 4ths, 20-7½ per cent. This makes the net prices 1sts, $10.95 doz.; 2nds, $10.40 doz.; 4ths, $9.38, doz.

Many Other Prices Go Higher

Carborundum Goods Higher.

Carborundum sharpening stones have advanced and the new discount is 15 per cent. instead of 20 as formerly.

Mrs. Potts' Irons Up.

Mrs. Poots' irons have advanced and the new price is as follows: No. 55 plain—90c set; No. 50, nickel plated, $1 per set of three.

Cotton Twine Up 1 Cent.

Cotton twine has advanced 1c lb. and is now quoted; 3-ply, 35c lb.; 4-ply, 38c lb.

Fox Scales Higher.

Fox platform scales have advanced and the new price is:—1200 lb., $18.50 each; 2000 lbs., $28 each; stamping included at foregoing prices.

Maydole Hammers Up.

Maydole Hammers have advanced about 33 1-3 per cent. and the new net prices are as follows per dozen:—No. 1, $13.10; No. 1½, $12.00; No. 11, $13.10; No. 11½, $12.00; No. 2, $11.25 No. 3, $10.15; No. 12, $11.25; No. 13, $10.15.

Perfection Stoves Higher.

New Perfection oil stoves have advanced in price and are now quoted as follows:—

2 Burner Oil Stove, $7.95 each; 3 burner oil stove, $10.45 each; 4 burner oil stove, $13.40 each; No. 120 heater, $3.20 each; No. 125 heater, $3.05 each; No. 130 heater, $3.45; No. 160 heater, $5.70 each.

It will be noted that both cook-stoves and heaters have been advanced.

Steven's Rifles Up 10 Per Cent.

Stevens' rifles have advanced 10 per cent. and the new net prices are as follows:—

No .14½ Little Scott, $3.85 each; No. 26 Crack Shot, $4.75 each; No. 12 Marksman, $6.25 each; No. 17, Favorite, $7.75 each; No. 27 Favorite, $8.00 each; No. 70 Repeater, $11.50 each; No. 70½ Repeater, $11.50 each.

Linseed Oil Takes Big Jumps

Linseed oil has gone over the dollar mark. On Tuesday it was quoted at 93c for raw and 96c for boiled in single barrel lots. Wednesday the price was advanced to the following prices:—1 to 2 bbls., raw $1.05 per gal.; boiled, $1.08 per gal.; 3 to 5 bbls,. raw $1.04 per gal.; boiled $1.07 per gal.; 6 to 9 bbls., raw $1.03 per gal.; boiled $1.06 per gal.

Turpentine remains at 71c per Imperial gallon in single barrel lots; 70c in 2 to 4-barrel lots; 78c in 5-gal. lots.

The oil market has gone up by leaps and bounds since last week. Unfavorable reports from the Argentine and uncertainty regarding crops in the northwest are given as the cause from the recent heavy advance in flax seed prices.

White Lead Firm.

White lead in oil is firm at the advance prices given last week. Some concessions are made by jobbers who have heavy stocks of lead on heand. The manufacturers price to the trade is ton lots $13.95 per 100 lbs.; less than ton lots, $14.25 per 100 lbs.

Glass Moving Well.

There is a good movement in glass. The discounts are as follows:—Single diamond, 20 per cent.; double diamond, 20 per cent.; cut lights, 50-5 per cent. Prices open for 50 cases and over.

Putty remains unchanged at the following prices:—

Standard 100-lb. drums, $3 per 100 lbs.; standard, 25-lb. drums, $3.10 per 100 lbs.; pure, 100-lb. drums, $3.70 per 100 lbs.; pure, 25-lb. drums, $3.80 per 100 lbs .

Prices on Seasonable Lines

Cold blast and short globe lanterns are quoted at $8 doz. Cow chains are quoted at 40-5 per cent.

There is a good demand for game traps and prices are firm at the following discounts:—Victor, 67½ per cent.; Jump, 60-5 per cent.; Hanley & Norton, 55 per cent.; New house, 35 per cent.

Stove boards, wood lined are quoted at 50-10 per cent.; paper lined at 60 per cent.

Common wood side ash sifters are quoted at $1.75 doz. Weather-strip is moving well at the following prices:—wood and felt, 75 per cent. off; Frost King, $4.40 doz.

WINNIPEG MARKETS

WINNIPEG, Oct. 5.—The snowstorm which greeted Winnipegers Monday morning certainly was a great change from weather which had been prevailing, and if general throughout the province will retard threshing operations considerably. Some reports from various points in the West indicate that threshing has already been delayed to some extent owing to wet weather, but it is to be hoped that serious consequences will not result.

The action of the Grain Commission, in session last week, in providing three new grades to take care of wheat which is rusted should find favor throughout the West. This will assure a market to those who wish to sell their grain at better prices than might otherwise have been obtainable.

Many Prices Go Upwards

The markets for the past week have

(Continued on page 56.)

NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

THE GILSON WEEDER

A new style of weeder has recently been placed on the market by the J. E. Gilson Co., of Port Washington, Wisconsin.

The Gilson Weeder is not swung like a hoe, but has a double-edged blade, which the makers state moves just beneath the surface, cutting the weeds in either direction, and loosening the soil.

The Gibson Weeder.

It can be run close to the plants and in under shrubs and flowers. Turned upside down it is a rake.

The weeder is made in four sizes, each with a 6-foot handle. The junior weeder is made in two sizes, each with a 16-inch handle. It is said that with the weeder florists and gardeners can do as much work with it in one hour as with a hoe in four.

MICATITE SPARK PLUGS

The Micatite moulded top spark plug has been placed on the market by the Pittsfield Spark Coil Co., Pittsfield, Mass. The makers state that the plug

Micatite Spark Plug.

is made by forcing a taper stem into a taper tube, which in turn is forced into a taper hole in the check nut. The end of the taper stem is slightly swedged so as to prevent the stem from forcing its way into the mica core when in use. On the top end of the stem a brass insert is screwed tight against the top of the mica tube, thus preventing any chance of the stem working downward. Over this mica tube and insert, and securely fastened to the top of the check nut in a slot, a top of special composition is moulded. This moulded top, it is claimed, is not affected by heat, cold or water; is not easily broken, never works loose and is absolutely gas tight.

The makers further state that the sparking wires are made of the best imported meteor wire. To clean the plug, all that is necessary is to remove the check nut, to which is fastened the entire core, when any sooted parts will be readily accessible.

The plugs are made in all standard sizes.

HYVOLTAGE SCREW DRIVER

A screw driver called Hyvoltage, that can be used, it is claimed, by electricians under any working current, has been placed on the market by the Strong Machinery and Supply Co., 21 Walker Street, New York, N.Y. The tool is made in three ways. The insulation is made down within ½-inch of the end of the blade for line work. It is made ¾-inch down the blade for regular work and with a short handle for garage work. The makers state that the driver is a thoroughly strong service, high voltage tool. Prices, etc., will be supplied upon request.

ANSWER FROM CANADA.

THE *Paint, Oil and Drug Review* of September 27, published at Chicago, Ill., refers to the recent advance in the price of paint in Canada (as announced in HARDWARE AND METAL of September 20) in part as follows:—

"On all sides the question is being asked: 'What is the outlook for paint prices?' The answer seems to come from Canada, where last week paint manufacturers generally advanced their prices as follows: Outside white, 20c; colors (mixed paint), 10c; floor paint, porch paint and flat wall paint, each 10c per gallon. Particular attention should be given to the marked advance for outside white, and it is a good indication of cost conditions. We are not predicting that this exact thing will happen on this side of the border, but it is a barometer, the reading of which should not be ignored.

"This advance of prices in Canada followed within thirty days of our editorial of August 23rd, and shows the accuracy of our 'Review of Paint Prices' in that issue.

"The value of raw materials has been well maintained for many months past and the stocks of cheaper products have long been exhausted, so that to-day paint manufacturers must figure their costs upon present values. It is a well-known fact that buyers generally of linseed oil have been holding off making their winter contracts, with the firm belief that prices would be cheaper. Fifty cents was the point desired, but never realized, 66 and 67 cents being the low point, with the market now at 71 cents. The increased price in linseed oil is sufficient to warrant higher prices to-day, not to mention the higher costs of other raw materials.

"This article is not intended to justify another advance in paint products, but rather to indicate to the jobbing and retail trade what the real situation is. A few weeks ago one manufacturer advanced all his leading products because the cost prices justified it. These people are undoubtedly working on present-day costs of raw materials. If such is the case, others will have to follow suit ere long.

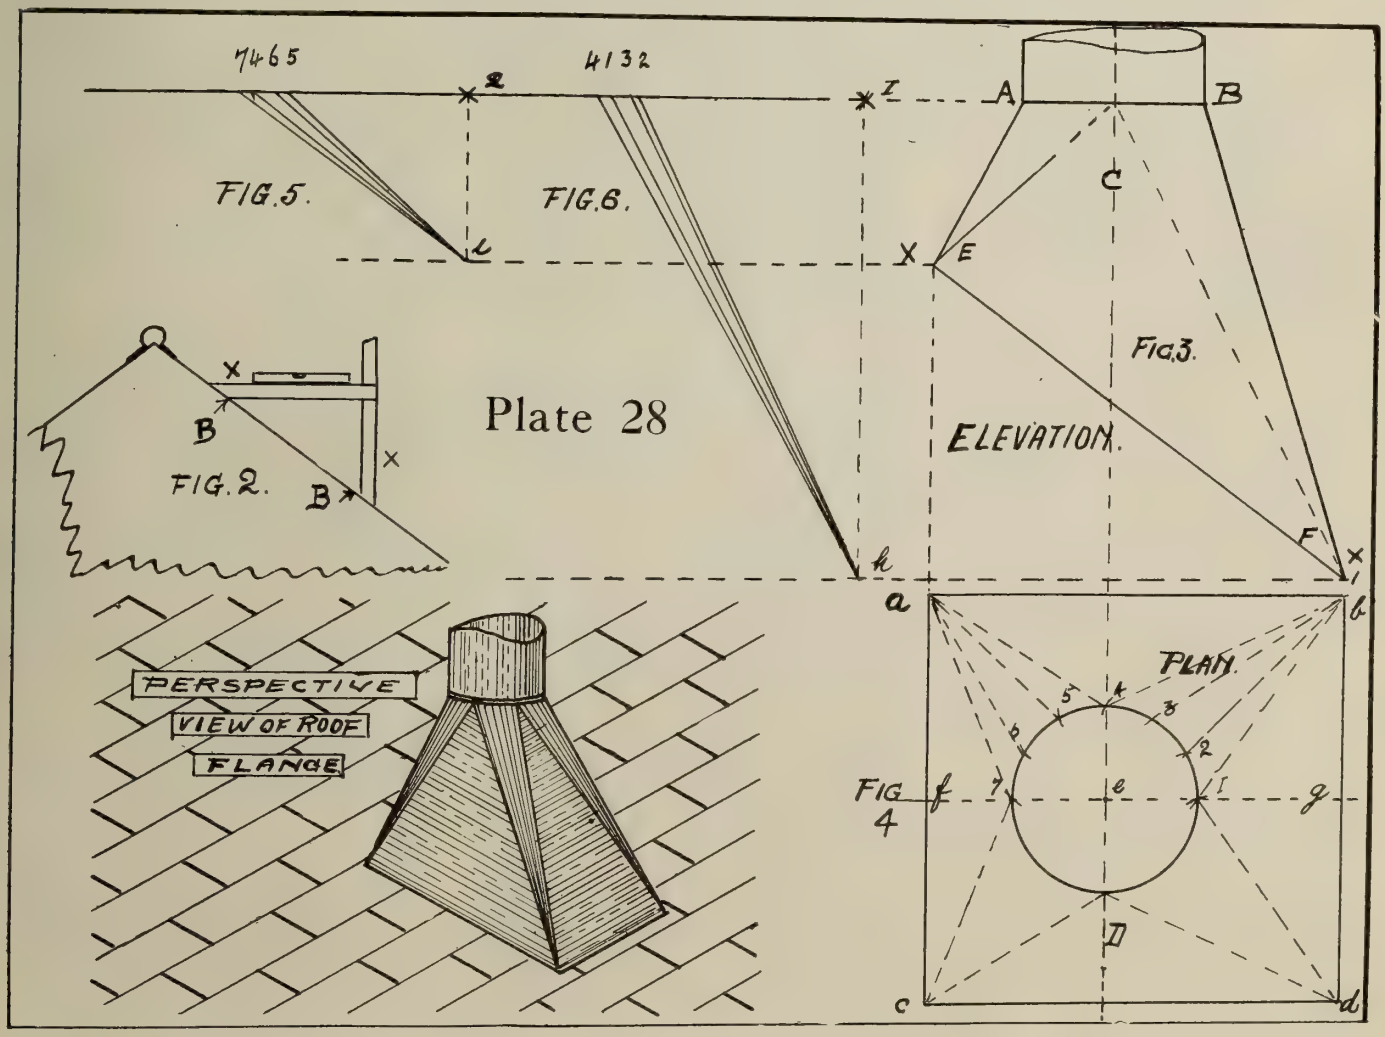
"Of course, paint manufacturers are holding off action, owing to fear of competition, and then again as a result of the hope that lower prices will be announced for white lead, oxide of zinc, lithopone and linseed oil. These things will soon adjust themselves, and upon them will rest the policy of every paint maker, because they are in the same boat. With short crops of flaxseed and raw material makers oversold, the paint manufacturer hasn't much chance of having cheap raw materials either on hand or in contemplation."

The foregoing editorial indicates that American paint manufacturers are up against many problems almost identical with those facing Canadian manufacturers, as described in HARDWARE AND METAL of Sept. 23.

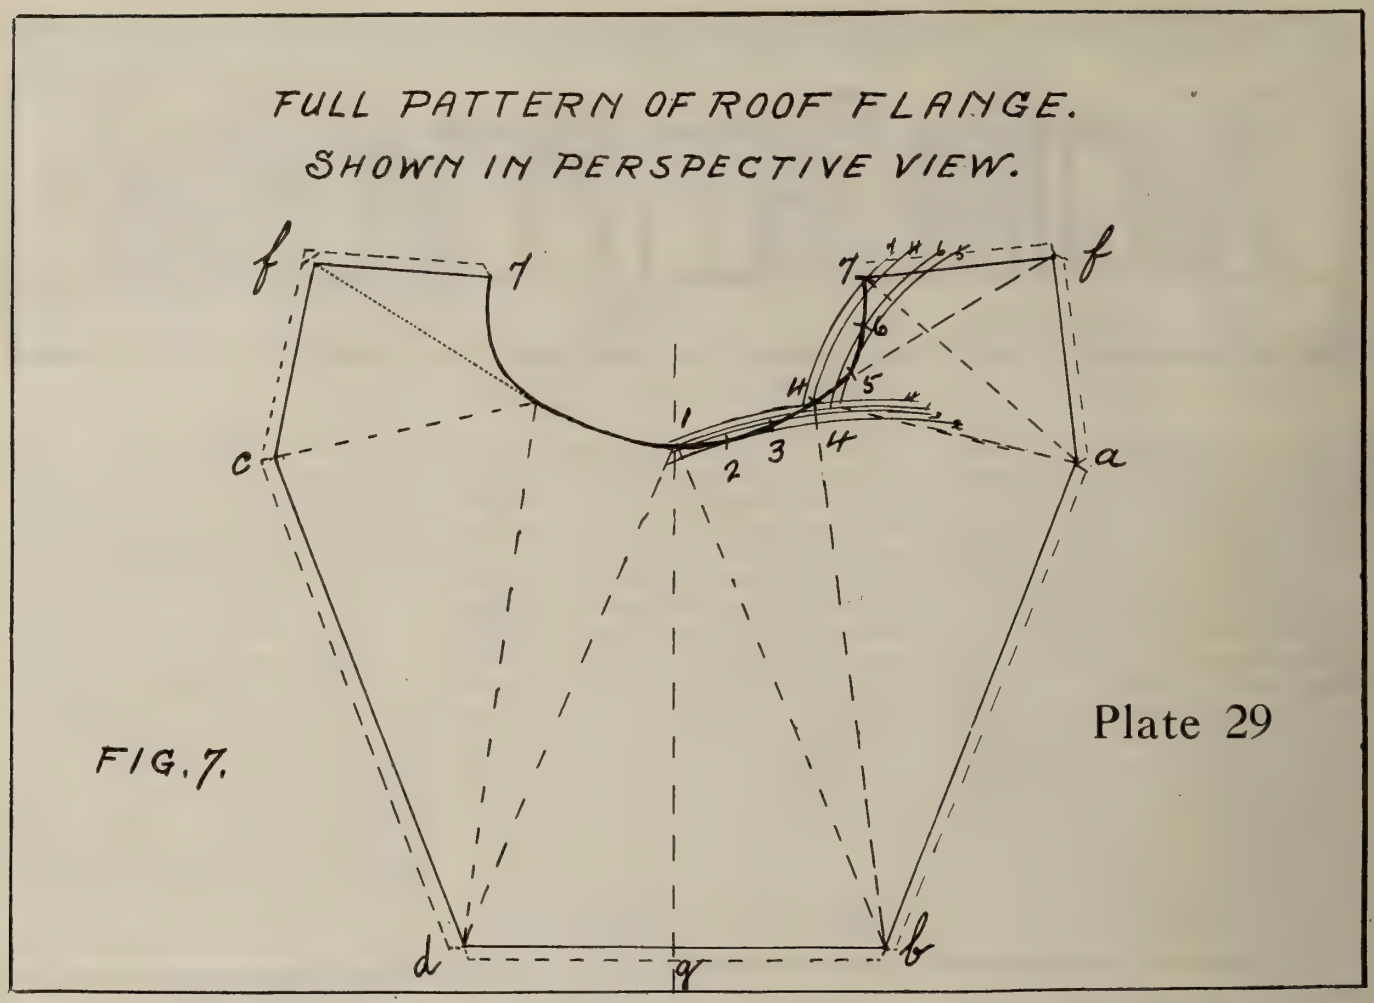
PRACTICAL SHEET-METAL WORK

THREE PIECE ELBOW WITH GUSSET OR GORE PIECE.

BY THOMAS STANFIELD



IN the September 30th issue of HARDWARE AND METAL we partially developed the pattern necessary for a roof flange, showing the various stages necessary to follow out in the development of such a pattern, and had progressed so far as to have described Figs. 2, 3, 4, 5 and 6. We will not describe the actual full pattern shown in Fig. 7.



First erect a vertical dotted line shown in Fig. 3, B.X.I. elevation and same length as B.X.I., though giving this pattern the same letters and figures as shown in Fig. 4, viz., the vertical dotted line in Fig. 7 describes g.1., then transfer the length from centre g, Fig. 4, to g. b.d., Fig. 7, and erect dotted lines as shown from b.d. to 1.

Next take compasses and describe arcs 1, 2, 3, 4 formed by using centre k in Fig. 6, and transferring to b., Fig. 7, then use stretchout measurements in circle on plan, Fig. 4, and intersect the arcs 1, 2, 3, 4 in Fig. 7.

Next place the compass at 1, Fig. 5, and open up to 4, then with that measurement from an arc at a., Fig. 7. Next place the compass point at F. and open up to E., this measurement is used to intersect the arc 4.a., now draw the dotted line shown at 4.a. Next transfer the various distances shown from i. 4, 5, 6, 7 in Fig. 5, by placing compass point at a., Fig. 7. Again intersecting these arcs by the measurements found at f., 4, 5, 6, 7 in plan Fig. 7, then by placing compass point at f., Fig. 4, opening up at a. or c., and transferring the distance to a. in Fig. 7, making arc, then placing compass point at E.A., Fig. 3, transfer this measurement to f.7, intersecting arc f. in Fig. 7. Next draw the various solid lines as shown, this finishes the half pattern; the other half may be developed by simply turning the half pattern over at g.1, which will give the results shown, the outer dotted lines are necessary to fasten flange on roof and should be wider than shown. It may be stated that this pattern is always best made in one piece, though only one half-pattern is really necessary. In our next issue we will describe the easiest way to develop the necessary pieces to make up a roof hopper, which are very desirable on flat roofs.

(Continued in next issue.)

Trade Inquiries

The Department of Trade and Commerce has received the following inquiries relating to Canadian trade. Addresses may be secured from the Department, or from the Editor, Hardware and Metal, Toronto, Canada. Please quote reference number when requesting addresses.

1179. **Gas globes and chimneys.**—A large Bristol firm of manufacturers and merchants desire to obtain from Canada gas globes and chimneys.

1180. **Gas burners.**—A concern in Bristol wishes to import inverted and upright gas burners from Canada.

1181. **Sheet zinc.**—Is required by a firm of manufacturers and merchants in Bristol.

1183. **Linseed cakes.**—A Newcastle-on-Tyne firm makes inquiry for linseed cakes in lots up to 500 tons. Offers are asked for c.i.f. Newcastle-on-Tyne grain warehouse, or Tyne dock, including war risk.

1184. **Hammers, hatchets, etc.**—A Sheffield firm makes inquiry for adze eye hammers, wedge head hatchets, tailors' trimmers, and best quality shears with welded steel blades, which are now being supplied in large quantities by the United States.

1190. **Heating system.**—A Johannesburg firm is prepared to take up agency in ore crushing machinery, shoes and dies for stamp mills, which must be forged or pressed. Mining machinery in general will receive their attention.

1192. **Air drill hose.**—A Johannesburg firm of mining suppliers and general hardware dealers requests catalogues and other details on building, mining and household hardware, stoves, ranges. Cheap and Quebec round stoves will be entertained.

1194. **Leather belting.**—A Johannesburg firm requests particulars re leather beltings for agency only.

1195. **Hardware.**—A Johannesburg firm of wholesale dealers who are the representatives of a large Canadian firm, ask for quotations and catalogues illustrating hardware of all kinds, dairy machinery and implements, hand tools, woodenware, brushware, handles and household appliances.

1197. **Hardware.**—A South African firm with wholesale distributing houses in three provinces of the Union, Natal, Orange Free State and the Transvaal, will be pleased to hear from Canadian firms in any line of general hardware covering household, mining or building supplies.

1198. **Refrigerators.**—A South African firm with wholesale distributing houses in Natal, Orange Free State and the Transvaal, asks for quotations and illustrated catalogues on Canadian-made refrigerators.

1199. **Washing machines.**—A South African firm with wholesale distributing houses in Natal, Orange Free State and the Transvaal, will be pleased to hear from Canadian manufacturers of washing machines. Catalogues and f.o.b. quotations requested.

1202 **Building ironmongery.**—A Johannesburg firm of merchants is prepared to take up South African agency in iron and steel building material of any kind, and roofing material.

1203. **Building material.**—A Johannesburg firm is prepared to take up representation on some lines of mining supplies and to purchase outright on other lines. They request catalogues and all details re packing, price, etc., on steel and iron mining supplies of all kinds, including picks, shovels, handles (hammer and pick), bolts and nuts, tubing and bar iron.

1206. **Agency.**—A South African commission house, with headquarters and sample room in Johannesburg, now representing some Canadian firms, is prepared to take up Canadian agencies in stoves and general mining material, not machinery.

1207. **Hardware.**—One of the largest firms of general dealers in South Africa requests catalogues, prices and packing details on all hardware lines for household, mining (not machinery) and farm use. Brushware, handles, hammer and pick, and woodenware included.

1212. **Hardware, mining and household.**—A Johannesburg firm of wholesale dealers requests catalogues, price and packing details on all hardware lines for household, mining (not machinery) and farm use.

1214. **Mining and railway supplies.**—A South African firm, with engineering branch in close connection with the mining and railway supplies of South Africa, request correspondence from firms prepared to ship such lines as rails, light and heavy, steel cars, ore cars, forgings, chain blocks, steel plates and angles, steel structural work, centrifugal pumps, shovels and other lines.

1216. **Hardware and sundries.**—A wholesale firm in Johannesburg requests catalogue and price list on all lines in general, mining and building hardware, shovels, pick axes, hammer handles and other lines.

1217. **Furniture, k.d.s.**—A Johannesburg firm of importers asks for catalogues and prices on all furniture which can be shipped k.d.s.

1218. **Refrigerators.**—A Johannesburg firm of wholesale importers asks for catalogues and prices on Canadian-made refrigerators.

WHAT OTHER PAPERS SAY

HIGH PRICES BIT MAIL ORDER CONCERNS.

A decided change is noted in the recent catalogs issued by the large retail mail order houses.

Heretofore it has been customary to guarantee all quotations until such time as another catalog was issued some six months later.

Current catalogs, however, state very decidedly that these concerns reserve the right to advance their prices at any time, without notice, to conform to market conditions.

Thus it may be seen that one of the strongest planks on which these concerns have appealed for business in the past has been removed from their platform.

If the consumer cannot be certain that the prices quoted him in these catalogs are the ones which he will be called upon to pay, the natural result would appear to be an undermining of his faith in the mail order concerns.

Certainly, if he has one or two instances where his check or money order is returned owing to an increase in price of commodities included in his order, the above result is almost certain to be true.

A comparison of these latest catalogs with those of six months ago indicate many, many instances where marked increases in the price of goods have taken place.

This too will help the local merchant. It has been quite common during the past few months for a retailer to be told that he has increased his prices whereas the mail order concerns have not.

The consumer has therefore doubted to some extent the truth of the many reports regarding merchandise shortage and price advances.

This, with the advent of the new catalogs, is all changed.

Indications would certainly point to this as being the banner time for all retailers to make strenuous efforts to overcome the tendency in their respective communities toward mail order buying.

WANTED—A STATESMAN.

The Dominion Government, dawdling away valuable time on a compromise scheme of national registration, which they know very well is going to be ineffective, if not actually barren of results, are just a little bit more ridiculous than the man who locked the stable door after the horse was stolen. The hero of the allegory was at least able to make up his mind, even if he was too late in doing so; the Cabinet, on the other hand, do not seem to be able to make up their mind at all, on some things. The regularity with which they unanimously adopt a motion to temporize almost makes one wonder whether they really have any mind to make up.

The paramount importance of the issues facing Canada to-day makes it clear beyond question that National Service is the one and only safe foundation upon which to build up our organization for the prosecution of the war. With the illuminating spectacle before us of what England is doing, of what France, Russia and our other Allies are doing, we must realize that to content ourselves with doing less than our best is to brand ourselves as slackers. Now Canada is no slacker, as the votes of her people will one day show, but the men who comprise the Government of Canada are slackers of the worst kind if they persist in negativing the desires and efforts of a proud and loyal race that is determined to maintain the traditions of its volunteers who have poured out their life-blood on the battlefields of Flanders.

The thing is so perfectly obvious, so absolutely unanswerable, that in looking for an explanation of the Government's policy of masterful inactivity, one is forced to conclude either that they are utterly incompetent to administer Canada's affairs in this time of crisis, or that they attach more importance to the preservation of their political life than they do to winning the war. It may be a brutal statement to make, but why not be frank about it?

Now the Cabinet as a whole are not incompetent. Better men for the job might perhaps be found, but nevertheless the men who constitute our Government have sufficient brains among them to know what is the right and proper thing to do. Then why don't they do it?

If France, Russia and England, or if any one of them ,had fought this war in the same laissez faire manner that Canada is fighting it, we should have had a Von Bissing over here by this time as Governor General. And by the same token, if Canada had had a Lloyd George in its Government, a man who not only knew the right thing to do but who had the courage to go out and do it, regardless of political consequences, we would now be enjoying the unspeakable satisfaction that effective participation in the war would afford us, instead of suffering the disappointments and heart-burnings that a lot of time-serving opportunists have not hesitated to inflict upon us. Canada is in sore need of a Lloyd George to-day. Let him show himself, let him declare himself, and the people of Canada will back him to the hilt. Enough of politicians! Give us a statesman!

RETAIL BUSINESS FORGING AHEAD.

(From National Hardware Bulletin.)

In spite of the various drawbacks which have for years beset retail business both from within and without, retailers are steadily forging ahead.

As a whole they are doing more business, their stores are being enlarged, they carry better selected stocks, they are better managers than their predecessors were.

By "they" we mean the great rank and file of the mall retailers.

The fact that so many of them are earnestly striving to improve their business methods is one of the healthiest signs we know of.

Just recently a plan was developed whereby a state university will furnish to dealers who wish it an expert who will go through their stores, examine every department, investigate local trade conditions and submit a scientifically prepared plan for handling the business.

When this arrangement was announced, more applications were sent in for this service than the university could take care of in two years with its present facilities.

There was a time when plans of this nature would have been considered absurd. Now they are looked upon as practical. A real business expert, like a physician, will locate troubles which cannot be diagnosed by the patient.

Right here is where we are moved to utter a note of warning.

There are plenty of self-styled experts in the field and there have been for several years, but the main object with these fellows is to sell you expensive store fixtures or some so-called special bookkeeping system at an exorbitant figure.

This kind of expert service will not save a business that is getting into shoal water.

The real expert gets down to brass tacks, locates real troubles and has a remedy ready.

With the universities and the associations taking this matter up and retailers showing a growing interest in the subject, store wastes and losses will be reduced to the minimum, modern methods will be installed and retailing raised to a high degree of efficiency. This will not only strengthen the dealer's position in the field of distribution, but largely clear the way for continued business expansion.

LIGHT CROPS IN U. S.

(From Cordage Trade Journal.)

The United States, after a year of exceptionally large crops, has this year had the misfortune to produce crops considerably below the average. There is no good to be gained by a failure to look the facts in the face. Light crops are not beneficial for the material welfare of the country, and the poor crops this year are not to be set aside gayly or in any light spirit. Yet, the United States was never in a better position to meet a crop failure than it is at the present time, for it has been blessed with a series of good crop years which have left large reserves of important crops, notwithstanding the great sales abroad. It is certain that the good effects of the active conditions of the last crop year constitute an impetus that will carry trade in this country forward through at least a portion of the new crop year, although various ill effects of the crop shortage will manifest themselves, even as they are now doing.

Crop conditions this month certainly show a startling contrast with those of September, 1915. On September 1, 1915, the United States Department of Agriculture reported that thirty-seven crops showed an average (measured by the average of the crops for a number of years) of 105.5. This year the Department reports an average for thirty-four crops of 94.6. Last year in August the crops made a gain of 1.6, while this year they made a loss of 2.8.

LABOR AGITATORS AND STRIKES

(From New York Commercial.)

All classes of labor should realize the folly, or worse, of those union organizers who are advocating a sympathetic strike in New York City to bolster up the attempt to stall traffic on the traction lines. If half a million or more work people quit work, starvation will force them back in a few days, because the resources of the labor unions are inadequate.

What these labor agitators really want is anarchy in this city. They hope that a walkout of half a million work people will be followed by serious rioting, and that the city and state authorities will not have courage enough to stamp it out in an election year. There is little likelihood of trouble, but the intent to provoke it is evident.

If membership in labor unions involves obligation to break contracts and starve at the behest of a walking delegate when work is plentiful, wages high, and conditions satisfactory, what benefit is derived from paying dues? Never before was the weak spot in labor unionism more clearly exposed. It is not protection; it is destruction of the welfare of the toilers who were never so prosperous as now. Nothing can be gained by starving in the midst of plenty and lowering the consumptive capacity of the masses.

WEEKLY PAINT DEPARTMENT

Well Mixed Paints Go Higher

Linseed Oil and White Lead Have Advanced Since Last Advance in Mixed Paint Prices—Further Advance in Paints Not Unlikely.

TWO weeks ago, when announcing the advances in the price of ready-mixed paints, HARDWARE AND METAL gave the views of paint manufacturers, who stated that unless the costs of raw material came down, there would probably be further advances in the price of liquid paints before the end of the year. Since that time linseed oil has made some remarkable advances in price, following unfavorable news from Argentine, and partly owing to uncertainty regarding the Canadian flax crop. White lead in oil has also advanced 50c per 100 lbs. since the advance went into effect on liquid paints. Pig lead is still very firm. Linseed oil is still rather uncertain, but there is every reason to believe that prices may go higher. The advance for one week has been around 20c per gallon. When the last advance was made in the prices of ready-mixed paint it was said that the advance was barely sufficient to cover the increased costs of materials at that time. With higher costs for white lead and linseed oil, it is only reasonable to expect still higher paint prices in the very near future.

HARDWARE AND METAL, when referring to the advance in the price of ready-mixed paints two weeks ago, stated in part as follows:—

"Since the outbreak of the war, slightly over two years ago, high grade white paint has been advanced in price to the retailer 47½ per cent. Colors have been advanced 31 per cent.

"On the other hand, costs of raw materials to the manufacturer have advanced as follows:—White lead, 77½ per cent.; linseed oil, 60 per cent.; oxide of zinc, 86 per cent.; French zinc, 130 per cent.; C. P. green, 300 per cent.; yellows, 100 per cent.; ultramarine blue (unprocurable), 400 per cent.; Prussian blue, 300 per cent.; lithophone, 125 per cent.

"Not only have costs of the foregoing and other materials advanced, but labor has cost more. Containers for the paint are all much higher in price. Even the literature, which is supplied free to the retailer, has increased enormously in cost.

"One reason why paint prices have been kept down is owing to the fact that most manufacturers have had stocks of low priced materials on hand, and working on an average have held prices down.

"To-day the stocks which were purchased at low costs have been exhausted, and the manufacturers are called upon to pay war-time prices. It is claimed by leading paint manufacturers that unless costs of raw materials decline in the near future, further advances will have to be made in the prices of ready-mixed paints. Raw materials will have to come down to meet the present prices of prepared paints or the manufacturers will be forced to advance prices in order to meet the costs of raw materials and manufacturing."

Shellacs Also Higher

Shellacs have been no exception in the upward tendency in paint prices. Shellac, as every hardwareman knows, figures extensively in floor finishes, filling for woods, lacquers, shellac varnishes, and in many kinds of piano work. The demand at the present time is greater than for a number of years past. Along with this big demand there is a scarcity of supply due to the shutting off in large measure of the transportation facilities. The shellac gum comes from India, where it is formed on the bark of a native tree after a certain insect stings the tree. The sting of the insect causes the gum to fester and ooze out in an irregular mass. This gum is gathered by the natives and taken to the central depots, where it is melted down and taken off in the shape of thin sheets or flakes.

Factors Making Article Scarce

At the present time there is an embargo on the transportation of shellac to England. There is in addition, a blockade of the Suez Canal. Any shellac that reaches America must necessarily come by the way of the Cape of Good Hope. This brings the cost of the material up approximately 3c per pound for freight charges alone. When there is added to this amount an additional 7½ per cent. war tax, the present high price is easily explainable. Furthermore, there is a scarcity in the crop itself in India. When these things are all lumped together it makes the prospect for the future in shellac anything but encouraging so far as lower prices are concerned. Wholesale paint dealers are frank in stating they can see nothing ahead except higher prices in shellac next year.

Putty No Exception

Putty, which is used extensively by painters and others wherever there is any rough surface to be made smooth, is also expected to join the throng of materials in still higher prices. Whiting, from which putty is made, is now coming to Canada by way of the United States. Formerly it came direct from England, but this chalk is one of the things on which there is an embargo. The United States being a neutral country, can secure some of the chalk in bottoms that fly the United States flag. The supplies that are getting out of England are somewhat limited at the best Putty is expected to be even higher in the future than it is at present.

Trade Picking Up

Dealers in paints state the trade during the past two or three weeks has shown much improvement. This increase is more noticeable in points outside of Toronto. Trade in this city is characterized as somewhat dull, due to the fact that there is very little building going on. In other parts of the province considerable paint is being used in the interior decoration of houses. Farmers, too, are showing a disposition to put more paint on their barns and other buildings as a preservative measure.

Open Branch in Toronto

McArthur-Irwin, Ltd., Montreal, have opened a branch warehouse and office at 46 Colborne Street, Toronto. A large stock of paints and chemicals will be carried at the new branch.

Obituary

WEEKLY PAINT MARKETS

(Continued from page 58.)

ed at the opening on Monday at $2.27 which was an advance of almost 2c over previous day. This figure is exceptionally high. Last winter when the price of linseed oil reached high level in January at $1.12 per gallon, flaxseed was not quoted at a figure as high as that at present. Demand for linseed has been fairly good even in the face of the advancing market. The market for oil cake has held firm, quotations being made from $43 to $45 per ton. As to what the outcome in the immediate future will be, oil men will not venture any opinion. It is a time of uncertainty. There are some who look for higher prices in the face of conditions but will venture no positive opinion. Quotations at the time of writing are as follows:—1 to 3 barrels, raw, $1.01½ to $1.05, Boiled $1.04½ to $1.08; 3 to 5 barrels, raw, $1.00½ to $1.04, Boiled $1.03½ to $1.07; 6 to 9 barrels, raw $0.99½ to $1.03, boiled, $1.02½ to $1.06.

Turpentine Prices Firm.

The prices of turpentine hold firm at recent quotations. The demand for these articles is only fair. Quotations locally are as folows:

	Per Imp. gal.
1-barrel lots	69c to 71c
2 to 4-barrel lots	67½c to 70c
5-gallon lots	74c to 75c

Higher Prices for Painters' Materials.

Wholesale paint men are unable to see anything in sight but higher prices for paint materials. They point out that there is little prospect of relief for the supply of dry colors. There is a great scarcity at the present time. Ochres that formerly came from France are now shut off altogether. American manufacturers are supplying an article but it is asserted that it does not compare with the original French product. Umbers nearly all came from Germany. Glues came from Austria. Gold leaf came from Germany. Now practically the only source of supply is the local gold beating plants which have developed since the outbreak of the war. Local beaters are unable to supply half the demand. Pumice stone which came formerly through Italian ports is almost entirely shut off, due to the activity of enemy submarines in the Mediterranean. Pumice is now selling at 5½c to 6c per pound. Before the war it was quoted at 2½c. "If materials continue to be as scarce as they are at present we look for very much higher prices by spring in all mixed paints," stated the manager of one large wholesale paint house.

Glass Is Firm.

Glass is in good demand owing to the advent of cooler weather. Single and double are both quoted at 20 per cent. off the list. Lots of 50 boxes and over are open. The market is firm and further advances would not come as a surprise. The trade is almost entirely dependent upon American producers.

White Lead Firm.

White lead in oil is firm at the recent advanced price. Prices are shaded occasionally by some jobbers who have heavy stocks which were purchased some months ago. The official prices are $13.95 per 100 lbs. in ton lots, with 30c advance in less than ton lots.

WINNIPEG MARKETS

(Continued from page 49.)

been featured by fluctuations in linseed oil, on which two advances over the recent drop in price have been recorded. This is due in great measure to reports from the Argentine of crop failure and the still uncertain development of our own Western crop.

Following on advances in various lines of builders' hardware recorded last week, other items continue to come under revision, and chief among these for the week is Stanley planes, the new prices approximating from 7½ to 10 per cent. increase.

Other lines of cotton goods on which new prices are being made are noted below. The new quotations show in each case advances over previous figures. Lines affected are:—Wrapping twine, 3-ply, balls or cones, 35c lb.; 4-ply, 38c. lb. Lamp wick—O, 45c gross; A, 56c; B, 83c; D, $1.30. Flat stove wick—3-in., $3.60 gross; 3½-in., $4.20; 4-in., $5; 4½-in., $5.60; 5-in., $6.40. Cotton clothes lines—48 ft., $1.80 doz.; 60 ft, $225 doz.

Sweat pads have also advanced, and new quotations are being made at $5.50 and $5.85 per doz.

Clothes Wringers Go Upwards

Clothes wringers suffered another advance in price during the past week of about 5 per cent., and new quotations show these prices to be effective:—Royal Canadian, $43.40 per doz.; Eze, $46.90 per doz.; Crest, $41.40 per doz.

An advance in lamp chimneys is also given out, and the new basis provides these figures:—A—Per case, $4.80; per doz., 65c; B—Per case, $4.50; per doz., 85c.

New quotations given out on white lead are on an advanced basis, and show this line up to the high figure ruling last summer. The advance is 50c per 100 pounds. Decorator's price in ton lots is now $14.55 per 100 lbs., and decorator's special, $13.55, with a further advance on each of 30c per 100 lbs., in less than ton shipments.

Mixed Paint Prices Advance

Following advances recorded in the Eastern markets on various lines of ready-mixed paints, new prices have been issued from Winnipeg showing an increase of from 10c to 20c per gallon. Dry colors and colors in oil have also advanced proportionately.

Another advance of 7½ per cent. has gone into effect on the price of pieced tinware. This affects all lines except such items as are made up with copper bottoms, on which there has been no change.

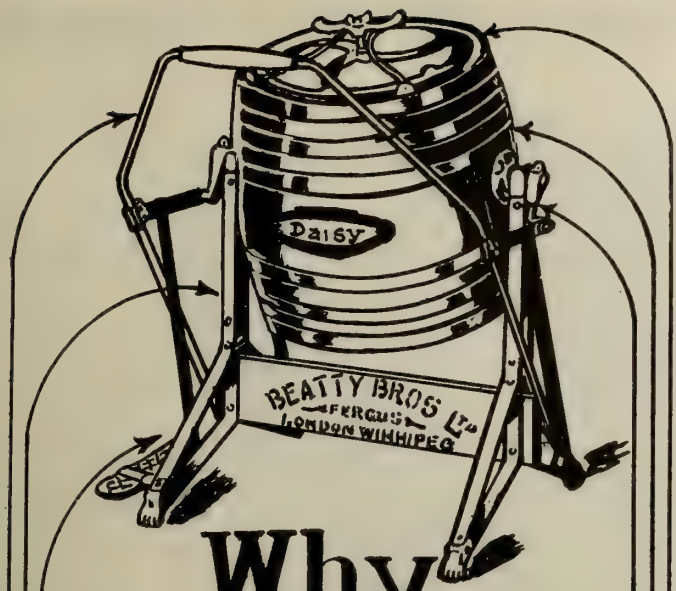
Rumors of a further increase in the price of all lines of shovels and scoops are afloat, and indications are that the new prices will be considerably higher than those ruling to-day.

The new prices quoted on linseed oil are as follows:—Raw, $1.06 per gal.; boiled, $1.09 per gal. Higher prices are expected.

Wire Higher For Spring

Any quotations so far available for lines of wire for spring shipment show that decided increases are being made. This is evident again in the prices now being quoted on Banner and Blue Ribbon poultry fence for spring shipment. The quotations follow:—24-in., $3.50 per roll; 36-in., $4.50 per roll; 48-in., $5.25 per roll; 60-in., $6.25 per roll; 72-in., $7 per roll.

Other lines on which changes have been recorded are as follows:—Galvd. band iron, all sizes, $8 per 100 lbs.; sand screen cloth, 30 in., 65c lin. yard; 36 in., 75c lin. yard. Crow bars—Wedge point, 5½c lb.; chisel point, 5½c lb.



The Quebec Tour.

Plans are being made in Montreal to receive the fifty Ontario business men in connection with their tour of Quebec cities which is being made for the purpose of promoting a better understanding between the two provinces. Arriving in Montreal on Monday, Oct. 9, they will go to Three Rivers and Quebec on Tuesday, Sherbrooke on Wednesday and if time permits the asbestos district at Thetford Mines will also be visited. The party will leave Sherbrooke on Thursday for Toronto and will again visit Montreal on the way home.

TRADE INQUIRIES

1039. **Apples.**—A Glasgow fruit importer, selling by private treaty, solicits consignments of Ontario and British Columbia box apples for sale on shippers' account.

Why The Daisy Churn Sells Ahead of All Others

Note the wide comfortable treadle for the foot. It helps make churning easy. This churn has bicycle ball bearings, which also help to make it run easily.

This crank is made of malleable iron and will not break. Let us mention here the beautiful finish of the Daisy. It is varnished golden oak, the staves are painted gold and the frame coated with expensive grey enamel. The finish alone will sell this churn.

Frame is neat and easily assembled. There are no stove bolts to shake loose. The open construction permits a pail to be set close for draining.

Staves are carefully selected, seasoned oak, and barrels are hand made. The barrel has the correct bulge for handsome appearance. Hoops are center punched to keep them in place if the churn is idle

The bow lever applies the power evenly to both sides so churn does not creep on the floor. There are wheels on the frame so the churn can be moved from place to place with little effort.

Lid is pine and never becomes rough or stringy with use. Peep hole is large and is not enamelled. For these reasons the Daisy is the best selling churn in Canada.

Daisy Churn

THIS is one of the great storage tank rooms where our varnishes are aged before shipping.

Every dealer knows that next to quality, uniformity is one of the leading essentials demanded by the varnish buyer.

All products offered under the same name and bearing Berry Brothers' label are always identical in every particular, no matter how long between purchases.

Body, drying, working qualities, durability and every other feature are fixed facts and not uncertain quantities.

Our accurate methods of manufacture and exceptionally large storage capacity enable us to insure these qualifications.

All our finishes are easy to sell because of their earned record for complete dependability.

LUXEBERRY WHITE ENAMEL—whitest white, stays white Makes a permanent snow white finish in either dul or gloss effects.

LIQUID GRANITE—floor varnish. Makes a smooth, satiny finish. Lasting, waterproof, marproof, also adapted for bathrooms, window sills and casings, and all interior work where great durability is desired.

LUXEBERRY WOOD FINISH—for general interior work. Develops and preserves the grain of all woods, and makes a handsome and lasting finish. Rubs perfectly.

LUXEBERRY SPAR—for exterior work. Especially adapted for durability under extreme exposure—front doors, store fronts, marine work, etc. Makes a handsome finish and will not turn white under the severest conditions of wear.

We make a specially adapted varnish or enamel for every known use.

Write for our price list and interesting dealer's proposition.

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, Oct. 4.—While the paint market generally was in an entirely uneventful state, due, of course, to the fact that fall paint business is about over, and spring trade supplying has not yet begun, linseed oil leapt into the very forefront of interest.

Rapid Rise Took Place

Between Monday and Wednesday, following what looked like confirmation of the adverse reports on crops in the Argentine, linseed oil came into very exciting conditions, and rose with rapidity from the 86c to 89c quotations for small lots, of last week, to as high as 97c for raw linseed in carload lots to the jobber. Naturally the price to the retailer went away up in accordance with the state of the market, and some firms were quoting $1 to $1.03 for raw and boiled linseed respectively, one to two-barrel lots. Other firms preferred to hold their hand, and not to quote at all, as still further rises in linseed were anticipated.

U. S. Demand for Seed

A remarkably strong American demand for seed in Canada arose during the week, and as exceptionally good prices were offered by crushers in the States, who seem to be nervous as regards their chances of getting any Argentine seed in time, some brisk business was believed to have been transacted. Altogether the whole market for linseed oil was in a thoroughly aroused state, and prices firmed up, and remained firm without any tendency to ease off at all, but rather the reverse, though there were opinions on the market strongly against any over-pessimistic view as to the real state of affairs on the Argentine.

The Canadian Crop Uncertain

Reports are still vague regarding the outlook for the Canadian crop. Hints of damage done by frost are heard, but not much store has been set by these, and there is a certain confidence evident in references made to the Canadian crop prospects. Prospects seem fairly certain to be higher now for linseed oil for the present.

Turpentine Steady

There was nothing unusual or unexpected in regard to the market for turpentine. Demand continues good and prices firm at the figure quoted last week for small orders, viz., 70c in single barrel lots. Supplies of turpentine are not reported to be plentiful, and the tendency of the market is towards firmness for the immediate future.

Dry Colors Unchanged

No change is reported as regards the situation in dry colors. Scarcity of various anilines continues most marked, and there is always more demand for particular lines of pure and permanent colors than supply to meet the demand. The market is interested in substitutes being tried out, but not to any important degree.

Lead Very Firm

Following the rise of white lead in oil last week, the market for lead keeps very firm indeed, and there is little doubt but that the rise in white lead has come to stay for a time, with even greater firmness in lead in sight on the market at present. Quotations remain at $13.70 per 100 lbs. in ton lots, with 30c advance for less than ton lots.

Brushes Cost More

Paint brushes, bristle and fine hair, have been firming up in price at a rate of about 10 per cent. for every stage of increase since the war began, and at present are on an average up from 20 to 30 per cent., or even as high as 33 1-3 per cent. The fine hair brushes are most affected, but bristle brushes, the materials for which used to come from Russia and Poland via Leipsig, Germany, are also increased, as the bristles now come uncertainly and by devious and unaccustomed routes. Chinese bristles, very good, it is said, for the purpose, are being used more now in America. Metal for the mounts is higher priced, only the cheaper grade brushes are so far affected by this aspect of the market.

Demand and Business Good

In the paint market in general for the past week fair to good demand has been experienced, with good inquiry in some directions for early spring supplies. Manufacturers are already looking towards the spring, and business outlook is reported good.

Window Glass Firmer

Window glass is reported to have risen by 10 per cent. in price in the United States, and a warning note has already been positively sounded in the Canadian trade to expect an increase in prices on this side. So far no change has been recorded, but supplies are scarce, demand is increased with winter's approach, and the market is very firm for glass.

Gasoline Unchanged

No change in the price of gasoline is reported this week, the product being quoted at 27½c per gallon ex-car, as last week, and the same rate in wood packages (returnable at $2 extra for package).

TORONTO

TORONTO, Oct. 5.—The upward stride of linseed oil during the past week has been the feature of the paint and oil market. Retailers are now wondering what will happen in ready mixed paints. Leading paint makers stated two weeks ago that unless costs of raw materials come down in the future, further advance would have to be made in prices of ready mixed paints. None of the materials used in paint manufacturing have receded since that time, and to make matters worse linseed oil has started to climb the ladder.

Oil Market Excited.

The linseed oil market has been in a most excitable condition during the past week. Fluctuations have been violent with advance from 10c to 12c per gallon. Linseed oil is now quoted at from $1.01½ to $1.05 for raw and three cents over these prices for boiled in one to two barrel lots. The upward trend in prices started last week while HARDWARE AND METAL was on the press and the tendency has been upgrade since that time. From day to day there have been fluctuations. Some oil men even do not care to give prices a few hours ahead of the opening of the seed market, and watch the market with almost feverish interest. Reports from the Argentine state that the flax crop has been almost 50 per cent. damaged through drought. The Canadian crop is not yet a certainty as threshing has been interfered with by snow in certain sections of the Northwest. Reports on the condition of the crop in the West continue favorable on the whole. Flaxseed in store at Fort William was quot-

(Continued on page 56.)

Black Lead for the Kaiser

An interesting feature of the Brandram-Henderson exhibit at the Toronto Exhibition was a miniature plant making lead shrapnel bullets, an industry that we have carried on extensively for some time. The bullets were made in plain view of crowds of spectators, and were distributed, warm from the machine, as souvenirs.

Needless to say, the exhibit attracted widespread attention—not only to the shrapnel machine, but also to the display of our complete line of paints and varnishes.

Mr. J. O. Orr, General Manager of the Exhibition, wrote us at its conclusion as follows:—

> *"We desire to express our thanks to you for the very excellent exhibit which you arranged in our Munitions Building, which contributed very largely to the success of the Munitions exhibit, which was considered by all to be the feature of our Exhibition this year."*

These Exhibitions are considered as being part of our National advertising campaign. We have found that they not only stimulate sales for our agents in the cities where they are held, but also impress the quality and comprehensiveness of our line upon visitors from all parts of the country, who go home and buy from our local agents.

22-24 gauge	4 10	4 55
26 gauge	4 15	4 60
28 gauge	4 25	4 70

Re Gauges of Sheets.

On account of it being practically impossible to secure galvanized sheets from England, owing to the war, American mills have decided that they will no longer roll the English gauges to meet this competition. However, they will continue to roll at 10¾ oz., which will be known as such or a 30 gauge, and will take the place of the former English 28 gauge.

SHEETS, CORRUGATED

	Per 100 sq. feet. Galvanized	Painted

A STRAIGHT LINE is the shortest distance between two points. When you handle Pratt & Lambert Varnish Products, you deal in a *straight* line of goods, a line that is made on honor — not simply to sell but to re-sell, time after time, to consumers who buy it because every item in it is *right*. This is the straight line — the shortest route to Safe and Sure Profits for You. It will pay *you* to get in line with us. Write us today.

THE P & L LINE is Complete. It includes a varnish for every purpose. Behind the goods there is a chain of factories, ready to fulfill any demands; a research department continually working to improve the present P&L brands, and to create new ones; a policy of national advertising which brings business into your store; and a liberal plan of dealer co-operation and selling help — all of which enable you to turn over your stock quickly and MAKE YOUR PROFITS.

MONTREAL

RAMSAYS BULLDOG BRUSHES

Trade  Mark

For over a half a century the name of "Ramsay" has stood pre-eminent among the trade, Dominion-wide, in producing the highest quality of Paints, Oils, Stains, Varnishes, etc., etc.—and to-day we have made another distinct step forward in serving the interests of both the dealer in Brushes and the users of them.

BULLDOG BRAND BRUSHES

—are made in Canada by skilled Canadian labor; using the most modern methods, attractively finished, and in variety sufficiently broad to cover all requirements, from the cheaper lines for household trade to the highest possible grades, as used by the skilled mechanic.

Our Trade-Marked line of BULLDOG Brand Brushes is well known to Canadians and an exceptionally profitable line for the retailer to sell

Write for our Catalog and Price List on BULLDOG Brand Brushes.

Stanley Tools

STANLEY NAIL SETS AND CENTER PUNCHES

"STANLEY" Nail Sets are made of a special grade of tool steel. They are hardened on both ends by an improved process, given an oil temper and will be found to "stand up" under the most severe conditions.

Special care has been taken in selecting the proper knurling for the shank, and the user will find that the feeling of security as to "grip" is a particular feature of "STANLEY" Nail Sets.

The neat and handy boxes in which they are packed make them an attractive article for counter display.

Manufactured by

STANLEY RULE & LEVEL CO.

DU PONT

Powders

are the

Hunter's Reliance

FOR dependability and stability the sporting powders made by this century-old company have gained world-wide recognition. This display of confidence is a proof of their popularity, and enables dealers to simplify stocks and make quick and profitable sales.

Du Pont Sporting Powders are noted for their high velocity, penetration and moderate recoil.

The leading ammunition companies load Du Pont Sporting Powders. They are also sold in bulk in popular metal canisters.

For shells and bulk packages, specify Du Pont loads —the hunter's reliance, and the best powders to sell.

A Salesman Always on the Job

IT is the constant dropping that wears the stone away. It is the constant knocking at the door of attention and favor that in the end gives you ready access to the good-will of buyers of your merchandise.

You can keep up a constant knocking—a bid for attention, a reminder of yourself, a spokesman of your message—this by using regularly

The FARMER'S MAGAZINE

No man whose customers and should-be customers are farmers should be absent from their attention. Their will and purpose to buy may mature at any time. The salesman on the spot stands the best chance to get the order.

All this you know, but—do you live up to the behest of your knowledge?

Let us tell you more about **The Farmer's Magazine** in a special letter.

THE "CANNON OILER"

FORCES THE OIL ANYWHERE

Easy Seller Because—

It is exceptionally convenient, quick acting and an oil saver.

Just what meets a long-felt demand for an oil can in which oil is entirely controlled by the operator in whatever position the can may be held. Not a drop of oil need be wasted, as the flow of oil stops the instant the pressure on the plunger stops.

A sure good sale and splendid profit. Order it now.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTRE. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability.
Made for Brace—made for machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.

FORGETTING

One of the things we all do well is to **forget.**
Names that were household worlds yesterday are gone to-day.
Because people knew your Name and your Line a year ago it is no sign th y do to-day. They forget easily.
Keep yourself in the public mind by advertising. It is just as important to make old friends remember as it is to win new friends. Advertising does both.

"W. & B." Drop FORGINGS

¶ We make a specialty of the highest grade Drop Forgings. Our exceptional capacity and equipment insure accurate forgings and prompt delivery.

DEALERS, ATTENTION

NOVELTY SELF-FEEDER *HOT AIR* FURNACES *are the best sellers*

The whole trade wants them because they make sales; because they save—
TIME, LABOR, COAL

Because they heat equally
ALL DAY and ALL NIGHT

The self-feeder principle places "NOVELTY" furnaces, which have been leaders for 30 years, away ahead of all others and—
THEY COST NO MORE

Write now for Catalog and Prices.

Condensed or "Want" Advertisements

There is always someone, somewhere, who is looking for just such a proposition as you have to offer—and it is more than likely that he is a hardwareman and a subscriber to HARDWARE AND METAL. Let an advertisement on this page bring you together.

RATES (payable in advance): 2 cents per word first insertion, 1c per word subsequent insertion. An additional charge of 5 cents for each insertion is made when Box Number is required. Each figure counts as one word.

POSITIONS WANTED

SPECIALTY SALESMAN DESIRES POSITION as sales manager or traveler. Twelve years' experience calling upon Ontario hardware trade. Box 313, Hardware and Metal.

SITUATIONS WANTED

THE "CHANGING TIME" IS GETTING near. There are many firms who have vacancies on their sales or office staffs to fill during the next few months. If you want to qualify for some of these vacancies, tell your story briefly in a Condensed Advertisement, and try in out in Hardware and Metal. A twenty-five word advertisement may land you a permanent position with splendid prospects.

AGENCIES WANTED

THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms, is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal. under this heading.

STORE EQUIPMENT FOR SALE

YOU MUST HAVE A LOT OF OLD FIXtures around the store which are no longer of any value to you, but would prove very useful to someone else in the hardware business. Find a purchaser for this equipment through an advertisement on Hardware and Metal's Condensed Ad. Page.

FIFTY DOLLARS TIED UP IN OLD FIXtures that you are no longer using, would make a lot of money for you if invested in stock and turned over three or four times a year. Get your money out, by selling the fixtures to one of Hardware and Metal's readers who may be looking for exactly what you have to offer.

HARDWARE WINDOW DRESSING—THIS is the first book ever written devoted exclusively to Hardware Display. There are 256 pages and over 200 illustrations with full working descriptions. It is the purpose of this book to illustrate and explain how hardware windows may be dressed to the best advantage—how they can be made to sell goods. It is not a theoretical work but a collection of specimens of the best work and ideas of the most expert window dressers in the world. These men have contributed their experience covering the many phases of hardware window display. This volume, therefore, represents the sum total of information on this subject presented as concisely as is consistent with clearness. By following the simple illustrated directions given in "Hardware Window Dressing" any clever clerk can put in good hardware displays at no cost whatever. Size 8 x 11 inches. Price $2.60 postpaid. MacLean Pub. Co., 143 University Ave., Toronto.

SITUATIONS VACANT

WANTED—A YOUNG MAN WITH EXPERIence in the hardware business, to act as clerk; also assistant shipper for the shipping room, with some knowledge of checking and packing goods. Please state age, experience and salary expected. Apply to Sumner Co., Moncton, N.B. (43)

BUSINESS CHANCES

IF YOUR HARDWARE BUSINESS IS FOR sale, who is more likely to buy it than a hardware man, be he merchant, clerk, or traveller? It is only hardware men who read Hardware and Metal, and a condensed advertisement in this paper offering your business for sale, will put you in touch only with the people who will be most interested.

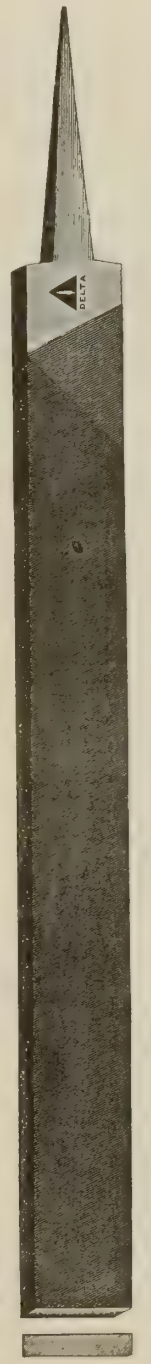
MISCELLANEOUS

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada. (tf)

ADDING TYPEWRITERS WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited, Room 314, Stair Building, Toronto.

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fenson Elevator Co., Toronto.



HARDWARE STORE BUSINESS METHODS —The authors of the articles in this book are for the most part practical and progressive hardware merchants. The embodiment in these articles of the experience of such able and enterprising men and the suggestiveness of the principles and maxims presented make this volume of infinite value to that trade. The 40 subjects discussed include: Rules and Regulations for the Hardware Store; Hardware Buyer; Good Methods in Stock Taking; Prices and Catalogues; Collecting Accounts; The Merchant and His Employees; Changing Business Conditions and How to Meet Them; Profit Figuring System; Starting in Business; Changing a Credit into a Cash Business, etc. 220 pages. Price $1.10, postage paid. MacLean Pub. Co., 143 University Ave., Toronto.

Kindly Mention This Paper When Writing Advertisers

We'll Do Anything—

So keen are we to have you prove our Delta Files that we will do anything in reason to prove to you that they are the best Files on earth.

We'll send you a sample, which you can put into the hands of the best and honestest skilled file user you know, so that he can prove it.

Delta Files

are guaranteed with a money-back clause. They are guaranteed to cut faster and keep their cutting edge longer than any other file made.

A shape and size for every use.

The only files from 3 to 24 inches long, made absolutely from Crucible Steel.

The trade mark on the tang is our pledge to you.

Your jobber will supply them.

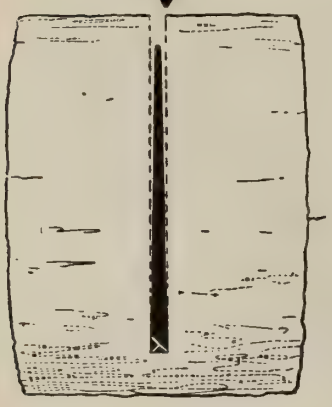
Ross Rifles Sell Well Now

To the sportsman who is looking for the best you can confidently recommend the Ross .280 High Velocity. Its power, accuracy and reliability have earned it a world-wide reputation among big game hunters.



To the man who wants a slightly less powerful, and therefore less expensive priced rifle, you can point with pride to your stock of Ross .303 Models. These finely finished rifles and all other Ross Rifles are made in Canada throughout and possess great accuracy and reliability.

For the youngsters the Ross .22 Cadet is the ideal weapon. It excels either on camp or trail or as a target rifle. It is the official arm for Canadian Cadet Corps and is an accurate, safe and thoroughly reliable weapon.

For catalogue, discounts, etc., address

ROSS RIFLE COMPANY - Quebec

Ground so they can't bind.

CROSS-CUT SAWS

ATKINS

Of course, there is easily a larger profit in them. You simply show their easy running and fast cutting qualities, explain the toughness of Sterling Steel. Any customer will pay your price. Try a box of twenty-five or a dozen. We'll make good.

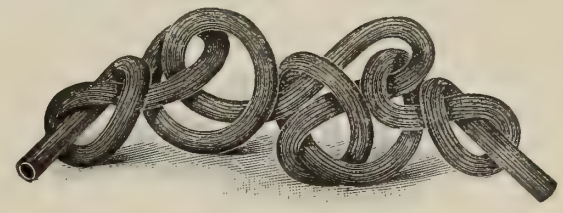
Sales $5,000,000 Annually

HOYT METAL COMPANY
EASTERN AVENUE and LEWIS STREET **TORONTO**
New York, N.Y.; London, Eng.; St. Louis, Mo.

Users of Babbitts Prize These Metals.

HOYT'S FROST KING A first-class all round Babbitt. It will not only take care of high speed, but will stand up to heavy work in an extraordinary way.



For saw mills, planing mills, threshing engines, traction, rolling mills, pulp machinery engines, it is without equal.

HOYT'S NICKEL GENUINE Is designed especially for use in gas engines, gasoline engines, and all classes of marine engines and is especially adapted for automobiles. For heavy duty high speed work is probably as perfect as an alloy can be made. This alloy is exceedingly tough and durable.

You'll Like the Profit.

GOODELL-PRATT

1500 GOOD TOOLS

ADJUSTABLE PISTOL-GRIP HACK SAW FRAME

This Adjustable Pistol Grip Hack Saw Frame overcomes the two principal objections to tools of this class.

The first objection is that most adjustable frames are not strong enough and will buckle when being used. This frame is made of ¼-inch by ¾-inch cold rolled machine steel with a very heavy back. This makes an absolutely rigid frame.

The second objection is that the handles of most of these tools are so high above the blade that it cannot be held steady and many blades are unnecessarily broken. The handle of this tool is so shaped that the hand grips the frame down beside the blade; and it is the most comfortable handle that you ever saw on any Hack Saw Frame.

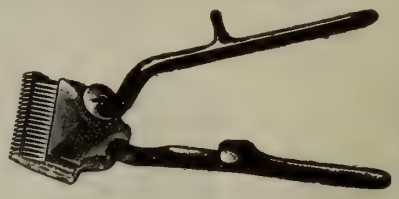
PRIEST'S HORSE and TOILET CLIPPERS

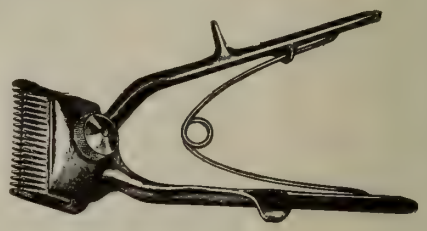
Made by American Shearer Mfg. Co.



present a complete line at a range of prices covering all requirements of the trade. They are all quality goods, and represent best designs and highest standards of workmanship, regardless of price.
Some styles of Toilet Clippers are illustrated below. All are heavily copper plated and polished before nickeling, thus giving a higher finish, which lasts much longer than ordinary plating. The utmost care is used in grinding and tempering the cutting plates, giving cutting qualities whose superiority may be readily demonstrated by comparison. No. 00 and No. 000 Shaver for beard and neck trimming, are clippers of the utmost lightness and refinement, not paralleled by any other American manufacturer.

STANDARD No. 0, No. 1 and No. 2.
Retailing at about $2.50. High-class barber's clipper.

No. 00 SHAVER
A light and elegant Clipper for beard and neck trimming. Retailing at about $2.25



SPEED

Quality Service

Courtesy in Business

* * *

Fittingly framed and hanging in the Offices of one of the most important Public Service Corporations on this North American Continent is the following

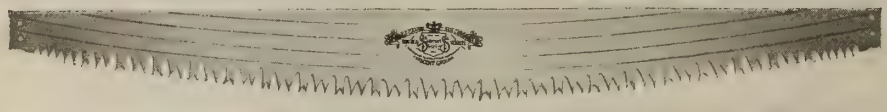
'Did you say Please and Thank you?'

Broad minded men direct the destiny of that Corporation, men who know that public or private enterprises to be lastingly successful must operate for the public good.

Quality and Service are the two important factors in our business life today, but Courtesy is the door through which they must enter.

We are large producers of Hamilton Pig Iron and our output of Open Hearth Steel Blooms and Billets, Iron and Steel Bars of all shapes and size runs into enormous tonnage.

The products of our mills include practically everything that can be manufactured from Iron and Steel and these we distribute to thousands of satisfied customers.



Our business is an extensive one and a successful one The World is our market: but our prosperity and success in the future, as in the past, depend upon the continued confidence, co-operation and good-will of the people we serve.

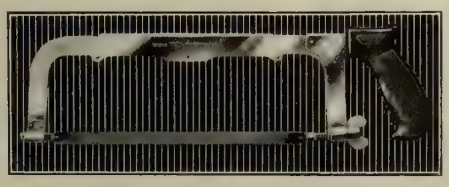
Are You Using Our Free Display Fixtures?



Displaying tools was a big problem before our handsomely finished displays of unique design made it so easy. No more stapling and wiring tools on panels that don't "stick out" of the window display, nor look effective after the endless work of getting them ready.

You just put a few tools on the Millers Falls displays. Put them in the window with a few tools on the floor of the window and the display is all done. Takes only minutes where tool windows used to take hours to prepare.

And they make 1000% better looking windows besides!

Send for book showing all the Dealer Helps we offer you free—also book "How To Sell Tools" that is recognized as authority on the subject. The book that has made thousands of hardware merchants Stop, Look and Think.

If you are not thoroughly familiar with what we are doing to help retailers get a higher batting average in selling tools—write us to-day before you do another thing.

Here's Star Hack Saw 1019, which is the last word in effective frame construction. Costs so very little more that no mechanic can afford to buy the old inefficient kind.

Pistol grip and "hang" of saw give you the greatest power with the least effort. Blade allows maximum stroke and handle fits any hand.

KIR-BEN

TRADE MARK

"KIR-BEN" sounds all right

REGARDED for its selling or advertising value, the Kir-Ben name is good. It is easily remembered—a sticky sort of name. It is novel enough and it is short without being fancy; it is easy to say and sounds good when said, and buyers when they talk to neighbors and say "Kir-Ben" are using a name not easily forgotten, a name that haunts the memory and ousts other names.

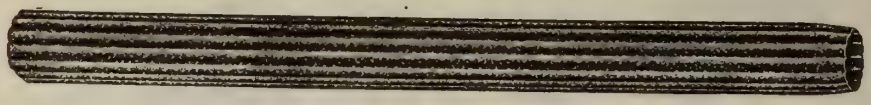
But a name alone, however good, won't do; you must have a good article to go with it, and it should please you to know, as it does us, that

KIR-BEN Ranges, Stoves, Furnaces

are as good as they look, and **better**; for their real goodness is **inside**, where it cannot readily be seen.

Be a KIR-BEN Agent

and be one this autumn. Demand will be good. Tie up with a firm of makers that will work with you and ahead of you to make sales, and whose range, stove or furnace **will never make you an enemy.**



You can make quick sales with Kir-Ben, and quick sales make fine profits. Have you our booklet? Do you know our prices and terms? Do you know how we are ready to co-operate with you to make sales? A letter of enquiry will give you answers to all these questions. Please write to-day.

EVERYTHING WE SELL WE GUARANTEE

Sept.20,1916.

Messrs,
Hardware and Metal,
143-153 University Ave.,
Toronto,Ont.

Gentlemen:-

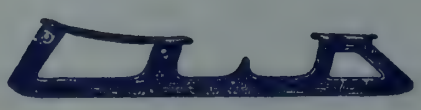
We beg to acknowledge receipt of your favor of the 16th., also cuts as mentioned therein and for which we thank you.

We are now using about fifty of these with good results.

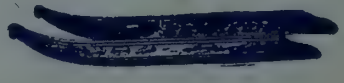
Yours truly,

THE W.W.COOPER COMPANY Limited.

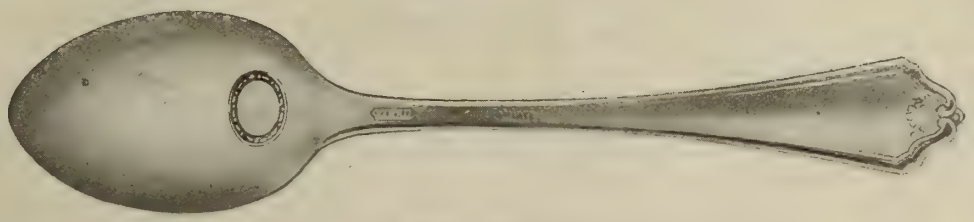
P/H. per. P.



Since we announced HARDWARE AND METAL'S Electro Service about a year ago, nearly 200 subscribers have availed themselves of the opportunity to secure cuts for their local advertising at low cost.



The letter from The W. W. Cooper Company, reproduced above, is only one of many which we have received from merchants who have had good results from using these cuts.



You can have equally good results from a judicious selection of electros combined with good "copy." Write now for free proof sheets showing our complete assortment of hardware electros. They cost only 20 cents each, and they will open up big possibilities for expanding your sales.

HARDWARE AND METAL

143-153 University Ave., Toronto, Ont.

BACK.—Note the position of Sterling Silver mound which prevents wear.

A Silver Mound—

on the back of all spoons and forks speaks for itself. Just at the vital spot where ordinary Plated Ware first shows signs of service, this "new idea" tableware has a Sterling Silver mound. Thus the long life of Sterling Silver is given to Plated Ware.

THE PATRICIA

is a line made in response to the trade's demand for a reasonably-priced plated ware that will give long service. In addition to the silver mound a heavy deposit of silver on an 18 per cent. nickel base gives permanent durability. There is attractiveness, too, in the design—and in the profits and quick-selling opportunities this line offers you.

Ribbing up the Liberal Party

HUNDREDS of men whom you know and sell to are tremendously interested either as supporters or opponents in the future of the Liberal party—in its policies, politics, and leaders. And these hundreds of men—Conservatives and Liberals alike—will want to read Gadsby's "inside" story of what is going on behind the scenes in the ranks of Liberalism in Canada.

Gadsby is "next" to big men at Ottawa and elsewhere. His ear is to the ground all the time. He is a pungent writer with a most incisive style, and he fairly scintillates in his article in the October MACLEAN'S—"Ribbing Up the Liberal Party."

This article will be followed in the November issue by another "inside" story of doings and movements in the Conservative party. Read the first of the series in

MACLEAN'S MAGAZINE for October

Some Toronto Liberals are bent on pushing Mr. Rowell, leader of the Ontario Opposition, to the front—as Sir Wilfrid's successor. And Gadsby reveals a great deal else of sensational interest. You can "cash in" on his article in **MacLean's.**

Other Good Things in the October MacLean's

Is Permanent Peace Possible?—by Stephen Leacock (in the role of a professor of political economy). Frequently Leacock doffs the mantle of the humorist, and dons his academic gown and speaks with an earnest seriousness—as a student, teacher and deep thinker. In this article, Is Permanent Peace Possible? he writes to make men and women think.

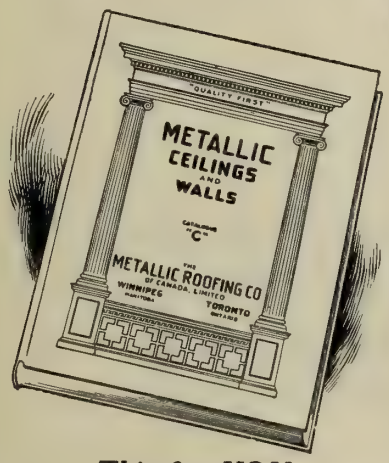
The Presidential Situation in the U.S.A.—by Agnes C. Laut. Miss Laut says that the German-Americans will support Wilson rather than Hughes, and gives her reasons. This is quite a contrary view to that commonly held, for we all know that the Hyphenates were "sore" on Wilson a few months ago. What has changed them? Miss Laut tells.

The Man from Athabasca—by Robert W. Service. Another "At the Front" poem by this Kipling of Canada. The stirring tale in verse of an old Athabasca trapper who left the hunting grounds of the Far West to do his bit in France and Flanders. A fine thing, this poem, admirably illustrated.

Present-Day Stage Favorites in London—tells of London's play-people who are entertaining the Canadian soldiers in London, at the camps and in the hospitals. Profusely illustrated.

Arthur Stringer and Arthur E. McFarlane continue their fine serials—The Anatomy of Love, and Behind the Bolted Door?

Robert J. C. Stead, a young Western poet of great promise, contributes verse entitled "In the Wheat."



"Janey Canuck," Canada's First Woman Magistrate—a sketch of Mrs. Arthur Murphy, and incidentally a story of a phase of the Woman's Movement in Western Canada.

Review of Reviews—The best thing from the best periodicals, condensed for busy readers. One of the most prized features of every issue of **MacLean's.**

THE Mission of MacLean's Magazine is to give the Canadian people a **Canadian** magazine of the highest type and interest and to promote the spirit and progress of Canadian Nationality. Your co-operation in these commendable objects of **MacLean's** publishers is solicited. We have all much to gain by putting Canada first in sentiment, business and affection.

Sweeping Changes in R.M.A. Control

Ontario Board Ratifies Arrangement to Give Management of Affairs to J. A. Beaudry and to Advance Yearly Fee From $6 to $15—Montreal Journal of Commerce to be Supplied to Members.

A SWEEPING change is being made in the conduct of the affairs of the Retail Merchants' Association, which will involve, among other matters, an advance in the membership fee from $6 a year to $15 a year and the centralizing of control of association affairs.

On Saturday, September 23, a proposition was laid before the Ontario Board at a special meeting held in Toronto. The terms of the proposition were in brief: The membership fee was to be raised from $6 to $15 a year, and the members would receive, in addition to their membership, subscriptions to the *Journal of Commerce*, a weekly financial paper published in Montreal, and to any other trade paper that they might specify. It was indicated that the *Journal of Commerce* would devote a certain amount of space to association matters, and would employ an associate editor to handle this department. The understanding announced, however, was that the journal would not be the official organ of the association, in that it would remain free to discuss trade problems from an independent basis. A further, and most radical, feature of the proposition was the appointment of J. A. Beaudry, of Montreal, publisher of the *Le Prix Courant* and treasurer of the Dominion Board of the R. M. A., as manager, treasurer and trustee for the Ontario Board, with full authority to settle all debts and to manage the affairs of the association in Ontario generally.

The arrangement was tentatively ratified by the Ontario Board at this meeting, but certain phases of the problem were afterwards brought into question, and it was felt wise to go into the matter again. Accordingly, another meeting was called for Wednesday, October 4, in Toronto.

At this session, which was attended by all the members of the Ontario Board, Messrs. Zeiman (Preston), Clark (Toronto), Higgins (Toronto), McCully (Stratford), Secretary Miller, and also by M. Beaudry, the question was threshed out at some length and finally ratified.

The Financial Problem

Representatives of the MacLean Publishing Co. were invited to attend and state their views. They did this, pointing out some aspects of the proposition that did not seem in the interests of the retailers. They were then asked to withdraw, and the following day Messrs. Beaudry and Zeiman called at the offices of the MacLean Publishing Co. and vouchsafed further information with reference to the proposition. The financial side of the arrangement was discussed.

It had been understood that the two points which had made the new arrangement acceptable to the members of the Ontario Board were—first, the additional revenue which would be secured; and, second, the possibility of shifting the responsibility of the Ontario deficit. This deficit is in the neighborhood of $7,000. In discussing the matter previous to the second meeting, certain members of the board seemed to be under the impression that under the new arrangement the deficit would be assumed by Mr. Beaudry or by interests represented by him. This idea of the arrangement had been voiced to representatives of the MacLean Publishing Co., and accordingly Mr. Beaudry was asked if this were the case.

His explanation was that in his new position as manager, treasurer and trustee he would have full charge of the affairs of the Ontario branch of the association, but that he was not taking the deficit off the board, as had been assumed. The deficit would be paid off as soon as possible from the funds raised by the association, but that, if the necessity arose to liquidate it more rapidly, he would guarantee that the necessary arrangements would be made.

"Do you mean that you would arrange to make a loan to the association?" he was asked.

"Yes, by a loan if necessary," he replied.

It was further stated by Mr. Beaudry that no further arrangement had been made with the *Journal of Commerce* other than that the publishers were to devote a certain amount of space to giving association news, and that in return the paper would be sent to each merchant who paid the advanced fee of $15, out of which a certain amount would be paid to the *Journal of Commerce*.

Other Provinces Also

It is understood that the whole proposition originated with the Dominion Board of the R. M. A., and will be submitted to each provincial board. With regard to the Province of Quebec, the proposition will be to supply *Le Prix Courant*, which is owned by Mr. Beaudry, to French-Canadian members in place of the *Journal of Commerce*.

At the first meeting of the Ontario Board it was stated that arrangements had been made with other trade papers, by which it would be possible to supply them to members under the proposed arrangement. It has developed, however, that such arrangements have not yet been made. In fact, many of the trade newspapers could not make such an arrangement, as it has been a settled policy that premiums should ont be used, and that there should be no inducement other than the merits of the paper itself to secure subscriptions.

It is announced that a meeting of the Dominion Board is to be held shortly to consider the proposition. Although the suggestion emanated from the Dominion Board, it has not yet received final ratification in that quarter.

Gasoline Carries Good Profit

Large Number of Turnovers During Course of Year Brings Gross Profits Up—Profit Is Really More Than Apparent on the Surface — Hardwareman in Better Position Than Garage Man—Prospect for Firmer Gasoline.

IS there any profit in gasoline that sells at 30c per gallon? This is a question that has concerned many retailers of gasoline. Gasoline is now selling from many of the service stations in Toronto as 28c per gallon. A question that becomes even more pertinent is whether there is any profit at this figure? Most hardware men are retailing gasoline from 29c to 30c per gallon. Gasoline can be bought from the oil companies at the present time at 26½c per gallon. There are many garage men who say they do not make any profit in gasoline at all. "If we break even we consider we are doing all right," many of them assert. "We keep it more as an accommodation and as a means to draw trade in other lines. It we get the automobiles coming to our garage we have a chance to sell them accessories. In tires and cylinder oil and other accessories there is a good profit, and we use the gasoline as a feeder for this trade."

This attitude may or may not be a good one. One of the facts that has been made patent as the result of the investigations made by HARDWARE AND METAL, in talks with garage men and oil men is that there is a fairly good margin of profit when it is considered that the turnover is rapid. There is a difference of opinion among dealers in gasoline as to just what it does cost to sell a gallon of gasoline. One large dealer, for instance, considered their expense in connection with the selling of a gallon of gasoline was 3.50c. On the other hand, another large livery garage considered they could make a substantial profit and make the handling of gasoline worth while on a gross profit of 3.25c per gallon.

Turnover Percentage Large.

Figured on a basis of 28c per gallon retail price, while the wholesale cost of the gasoline is 26½c per gallon, the profit on the gallon of gasoline is 1½c. On percentage basis this represents 5.5 per cent. It must be remembered that the turnover in gasoline is rapid. An average hardware store that has a fair trade in gasoline would probably handle on the average about 100 gallons of gasoline per week. This would be in the neighborhood of 5,200 gallons of gasoline in a year. Now for the initial outlay in gasoline alone on the original 100 gallons there would be invested $26.50. This, of course, does not include the cost of the tank. But that will be taken into consideration later. On the first 100 gallons turned over the profit at 1.5c per gallon would amount to $1.50 on an investment of $26.50. At the end of the first week he would take the amount invested in gasoline and put it back into a fresh supply and bank or invest his $1.50. The same money would earn another $1.50 the second week. During the month it would be turned over four times. In other words, on the original investment of $26.50 the gross percentage profit would be four times 5.5, or 22 per cent. For the year, if this rate of selling and rate of profit were maintained, the gross profits for the year would be 264 per cent.

There would, of course, be considerable work in the handling of this amount of gasoline. But when it is considered that on a basis of an investment of $26.50 at the end of the year the profits would be $78, it will be seen that the profits are by no means inconsiderable. It is the large number of turnovers during the course of the year that brings the gross profits up and makes gasoline worth while. If the margin of profit is 2½c per gallon, the profit is 9.4 per cent. each week on the investment. If the margin on the other hand is 3½c per gallon, the profit is 13.2 per cent., with a turnover each week. At the 2½c rate and 3½c rate the profits run into such considerable sums that one might be named a fit candidate for the Ananias Club if they were put down in black and white. There are factors that eat up a considerable portion of these profits. Let us see what they are.

Cost of Handling

In garages the overhead expenses is stated by the proprietors to be large.

"We figure the wastage on gasoline is 5 per cent.," said the accountant of one of the large supply houses. "In other words, on 100 gallons there would be lost by spilling and evaporation approximately 5 gallons. That is, of course, provided the dealer has a steel tank his wastage will be approximately 5 per cent. If he has not a tank the wastage may be fully 25 per cent. We consider the overhead expenses in our method of handling gasoline will run 1c per gallon. This would include the cost of the tank distributed over a number of years. The cost of wastage runs us about 1c per gallon, while the actual labor of pumping costs another 1c per gallon. The cost of the tank is a heavy initial expenditure. A 50-gallon tank costs $350, while a 200-gallon tank costs about $500. This must be allotted in depreciation at the rate of about 10 per cent. of the cost of the tank per year. The life of the tank would probably be about 10 years or over."

Figured on this basis, the concern in question, when they sell gasoline at 30c per gallon, would make a clear profit of one-half a cent. per gallon. On 5,000 gallons handled during the year this would net the concern $25 clear profit. But this concern handles many thousands of gallons each month.

Garage Overhead Large

When another large automobile livery was interviewed, the accountant there stated they considered their overhead expenses, wastage and cost of handling ran them 1½c per gallon. "But our overhead expenses are necessarily large here. We have to keep a man who devotes all his time to the handling of gasoline. In our own autos, and the amount we sell to customers, we use approximately 1,000 gallons per day. The greater part of this is consumed in our own machines. We consider that we do not make very much on gasoline when it has to be sold at 28c per gallon. We are of the opinion that one would need to sell gasoline at 29.75c per gallon in order to make a fair margin of profit at the present cost price of gasoline at 26½c per gallon. We sell our gasoline at 30c per gallon."

Hardwareman Has Advantage

"Admittedly our overhead expenses are large. With a hardwareman who does not require the services of a special clerk to look after his serving station, there should be a fair margin of profit even at 1.5c basic profit per gallon. If he can get more than 28c his profit should be correspondingly higher. The number of turnovers is a big consideration when the gross profit is being considered. A hardware clerk would no doubt be able to look after the service station without attaching any additional overhead expense to the store."

Then, too, the fact should not be lost sight of that gasoline draws trade in other things. There is a fine opportunity to talk accessories when the tank is being filled. Taken all in all, while the margin of profit on gasoline is appar-

(Continued on page 39.)

Sales Record for Store and Each Clerk

Daily Entries for Every Salesman From Sales Slips, With Monthly and Yearly Summaries—Comparative Records for the Store by Month and Year — Some Simple Bookkeeping Systems

A SYSTEM that employs forms that compels the proprietor to pore over them several hours a day, is almost as senseless as a lack of system, for it defeats its own object. Few heads of stores can afford to take up much of their time attending to the routine of their bookkeeping. All of this should be done by a clerk, and it should be simple enough for anyone with a few months' training in a business college to understand and operate in an expert manner.

The object in installing any bookkeeping system should be to secure the essential facts as to accounts, costs of doing business, the record of invoices and the time for meeting payments; petty cash payments; the sales, daily, monthly, and yearly, with comparisons with previous years, and also some record of the sales of individual clerks. At this stage we will not express an opinion as to the advisability of keeping track of the exact condition of each department, the stock on hand, purchases, sales, net stock left at the end of each month, the proportion of the overhead charges that this department should fairly be charged with, and other points connected with what is known as "departmentizing." Most merchants shrink from embarking on this last mentioned, fearing they will be smothered in intricate details that will entail more trouble each day than the additional knowledge is worth. For the present, then, let this part pass with a remark that the merchants who "departmentize" declare that it runs quite smoothly once the system is started, and seldom obliges them to increase their bookkeeping staff even in the larger stores.

Analysis of Daily Business

In this article it is proposed to take up a few of the more simple points in an analysis of one's daily business. Where cash registers are used the totals of the day's sales are ready for you, and the sales of each clerk as well. The "charge" slips, of course, require special handling, the same as the cash slips where all are sent to a central desk instead of being registered.

When these are handed in or sent by carriers to the office, it is usual to have separate files for each clerk, and number the clerks, 1, 2, 3, 4, etc., or A, B, C, D, E, and so on. Some bookkeepers keep the sales slips collecting all day on these files and add them up the first thing next morning. Others keep pretty well up to them, and, say, at 3 p.m., when finishing A's to date, puts the total, so far, on a slip on A's file, $20.87, and B's to-day, $27.63, and so on, so that when the last one comes in, perhaps the amount on a single slip has to be added to the previous total for each clerk, to have the day's total.

When the slips from time to time are totalled, the charge ones are entered in the loose leaf ledger. One store we saw a handy plan worked out by two rubber stamps, on slip being marked in purple ink:

PAID.
Oct. 10, 1916.
Jones Hardware Co.

On each of the "charge" slips, after the amount had been entered in the ledger, there was stamped:

ENTERED.
Oct. 10, 1916.
Jones Hardware Co.

In this way a very legible record was contained on each slip.

Entering Up Each Sale's Slip

Some merchants insist on every single slip sent in by a clerk being entered by itself, running in series from 1 to 50. For instance, a page might be ruled into say, ten section (for 10 clerks), A, B, C, etc., and under A would be No. 1 slip, 37c; No. 2, 43c; No. 3, $1.25, and so on, perhaps, up to 21 for that particular day, and the next day the record would start at slip No. 22, and go on, say, to 35, and so forth. The advantage in this, they say, is that they have thus a record of every sales slip that is used, and one can be kept out by the clerk for any improper purpose. Ordinarily, however, this would appear to add too much to the labor of bookkeeping. A simple page of the record of daily clerks' sales would read somewhat as follows:—

DAILY CLERKS' SALES—OCTOBER.

Day of Month	Clerk A	Clerk B	Clerk D
1	$ 5.82	$ 4.97	$ 6.55
2	15.90	16.42	19.75
4	3.64	4.93	3.51
31	4.25	7.80	5.65
Total	$297.74	$365.70	$412.96

Sometimes underneath the total on the page for each clerk is entered in red ink, for the sake of contrast and comparison, the amount of the sales for the previous year.

The monthly summary would run as follows:

Month.	Clerk A	Clerk B
February	$297.64	$363.80
March	356.40	413.94
April	387.65	454.25
December	495.80	586.37
Total	$	$ ....

The total daily sales are, of course, simply the summary of the clerk's totals for each day, but a comparison with the corresponding day of last year will be found very useful here, to tell how your business is going, for instance:

MONTHLY RECORD OF SALES.

Day	Total 1916	Total 1915
1	$ 98.80	$ 95.40
2	134.60	110.90
3	121.43	145.84
31	214.65	183.26
Total	$4,876.50	$4,163.40

Monthly Summary

The monthly summary of total sales would run as follows:

Month.	Total 1916	Total 1915
February	$3,784.91	$3,521.67
March	4,106.23	3,915.48
January	3,512.81	3,506.38
Total	.....	.....

Merchants who are not in the habit of using parallel records—last year's with this year's—will find the monthly comparisons very helpful in keeping track of the ebb and flow of their business. Many are disposed to despise this parallel system, but merchants who have tested it out find it a most useful guide, following it out on the same page sometimes for five years at a time. If the "charge" business forms a large bulk, it is usually advisable to run separate columns for cash and credit.

Loose Leaf Ledger System

Closely connected with the use of sales slips, cash and charge, is the entry into the ledger of the "charge" items. The loose leaf system is finding favor among a large proportion of merchants. This consists, as most are aware, of not only entering up the items the day they come in, but having a carbon copy of the account so that the one entry does for both, with the result that at the end of the month, there is the account all ready to be torn out by a perforated attachment with everything entered up complete, instead of the system of copying out each from the ledger at the end of the month. Some merchants send out only the total of each purchase, instead of the itemized account; the latter is far more satisfactory to the customer.

In an early issue some points in a Woodstock merchant's bookkeeping system will be described, with copies of forms used.

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVIII. TORONTO, OCTOBER 14, 1916 No. 41

EDITORIAL BRIEFS

THE PUBLISHER lives in hourly dread of hearing that another ten per cent. or so has been added to the price of paper.

* * *

BETTER BALE up your waste paper and send it to your friends for Christmas presents this year.

* * *

A HARDWARE buyer nowadays has to be a combination of detective, mind-reader and soothsayer—that is, if he wants to keep on the right side of the market.

GERMANY'S SPECTACULAR STUNT

THE spectacular achievement of a German submarine sinking six ships with alarming rapidity close to the shores of the United States rather amazed and startled the nation to the south of us, as well as the Canadian people. It is very unlikely that the performance will continue for any great period. The British authorities will put forth their very best efforts to round up the German undersea boat. Only when the methods, simple, yet effective, which the British have used for ridding the seas of submarine raiders become known, after the war, will the British people as a whole realize what wonderful work has been done by the British Navy. There is a great deal of sound common-sense in a statement made this week by the President of a large American concern, who was speaking of the latest German raid on shipping. This official stated in part as follows:—

"Does any rational being really believe that fundamentals have changed over night. Have we suddenly gone to sleep in a palace and wakened in a hovel. Is the yard-stick that measures the difference between security and chaos a German submarine? One might think so, if he did the American people so poor a service as to imagine that newspaper headlines are the ultimate arbiter of prices and values.

"Practically speaking, the brilliant German performance, which as a type of modern warfare compels admiration, means nothing unless it can be indefinitely continued. And unless our harbors are somewhere sheltering 'mother ships' or hidden supplies the day of the German submarine in the waters of the American coast will be a brief one. The British have shown an extraordinary facility in accounting for German submarines. They will do so again. This spectacular stunt of sinking six ships shocks and amazes our people. But it is a transitory development. It changes nothing. It alters no fundamental, economic facts."

GERMANY'S DILEMMA

ACCORDING to an Irish contemporary Germany now finds itself in a rather serious and amusing quandary regarding its iron crosses which it has been very generous in distributing. The Iron Cross is composed partly of silver, which runs around the iron centre of the emblem, three grammes being required. The manufacture is in the hands of eighty silversmiths, who have intimated that their supplies of silver are not equal to the demand. The government has now instructed them to apply to the society which is responsible for the collection of gold and silver objects, in return for the voluntary surrender of which the owners are given iron duplicates.

THE WHOLESALER'S TROUBLES

THE delivery problem is more perplexing than ever. A great deal of trouble is being experienced by wholesalers in securing deliveries of supplies.

There is a serious congestion of freight at all the large shipping centres, and the reduced staffs, caused by men enlisting, are totally unable to cope with the immense quantities of goods awaiting shipment and delivery. One of the chief difficulties appears to be a scarcity of experienced help. Large numbers of thoroughly experienced and trained men have enlisted for active service. Their places have been filled with inexperienced men, who are totally unacquainted with proper methods of procedure in the handling of goods. The result is that the delivery of goods is often delayed from one to three weeks, with consequent inconvenience to wholesaler and retailer.

Then there is a scarcity of help and materials in

many of the large manufacturing plants. Many manufacturers have had their productive capacity cut down from 30 to 60%. They are doing their best under the circumstances to meet the heavy demands made upon them.

Some wholesalers have received complaints from retailers regarding slow deliveries of certain lines of goods. The retailers should, however, bear in mind the fact that wholesalers are in practically all cases doing all that is possible to facilitate the rapid handling of goods. The wholesalers as well as the retailers and manufacturers are having troubles of their own.

THE ONTARIO DELEGATION

THE presence in Quebec of an Ontario delegation of representative business men for the purpose of promoting a better understanding between the two provinces marks the beginning of a new epoch in their relations. Too long has a mutual racial and religious prejudice been allowed to influence the two sections of our national family. The intolerant views of the demagogues of both parties have too greatly swayed the multitude. A spirit of mutual intolerance has crept into their relations. And it is from such intolerance that, the spirit of war springs.

The present occasion offers a happy illustration of what may be done toward lifting the veil which hides the good qualities of each from the other. It is to be hoped, that once lifted, it will never again be allowed to drop and that this occasion may prove only the beginning of a campaign of enlightment.

THE COUNTRY ROAD PROBLEM

MERCHANTS will find it to their own interest ardently to support movements which make for the securing of country roads worth while. The problem of better roads is attracting a great deal of attention, and largely through the indefatigable effort of a certain few in each province, is meeting with some sort of solution. Country dealers should do all they can to help on the good work. It is easy to see that better roads mean a minimizing of expense incurred in transportation. Good roads mean a saving, ultimately, of much time and always of money. Since they benefit the community at large, it is fitting that all sections get behind the movement and lend it their collective aid. It has been said from time to time that the farmer is lethargic on the question, that he will not bother himself to help along the movement for better roads. The automobile is steadily altering that, for possession of one makes a desire for good roads to run on. In the past, perhaps, the country dealers have not been as enthusiastic as they might have been for better roads. They should realize it is to their interest to put their shoulder to the wheel.

GOODS SHOULD BE RE-MARKED

ON several occasions HARDWARE AND METAL has referred to the necessity of retailers keeping a close watch on the markets and marking up the price of stocks when necessary.

It is only by closely following the markets now that a merchant can depend upon coming out ahead of the war. When prices begin to come down again he will have no choice: His competitors will be buying at the new and lower prices and trade will naturally flow in their direction until such time as he too marks down to the low level the goods bought on the crest of the flood.

Now he has a choice, but unfortunately does not always take advantage of it. The men of foresight to-day are marking up their goods when such is warranted by advances in the wholesale price.

Stocks have advanced tremendously in value that must now be realized on to offset the almost certain proportionate depreciation that may come when business becomes re-established on a normal basis.

ON WRITING LETTERS

EVERYBODY needs to be reminded occasionally of the importance of attention to detail, whether they be details of business or home management or anything else. A prominent manufacturer in conversation remarked recently that he had found dealers to be generally poor correspondents. He amplified this by saying that the word "poor" meant irregular, negligent and forgetful. He claimed that some customers of his never bothered to reply to any letter needing an answer, and that often reminder after reminder was sent before the response came. We do not think it is a fact that dealers are better or worse than any other body of men in answering letters, but that this manufacturer should think some is evidently the result of experience.

Negligence in attending to correspondence is to be deplored. The dealer who forgets or delays or procrastinates in this regard is probably just as slack in some other details of conducting his business. He creates that impression. If a dealer is known as a poor correspondent, his credit is very often injured in consequence, and he is put down as a merchant who is not progressive, and not a particularly good business man. Often, then, manufacturers and wholesalers pass him up, materially to his disadvantage.

Letter answering could be methodic. Set a time each day to take up and reply to all correspondence. Keep a copy of what replies are sent. Get a typewriter, if possible. It is economic, in the end. File all incoming letters, and copies of all outgoing. Take time and plan a system fitted to your own store.

EVENTS IN THE TRADE

HARDWARE WHOLESALERS MEET

The annual meeting of the Canadian Wholesale Hardware Association was held in Montreal last week, when considerable business was transacted and officers elected for the ensuing year. Owing to the fact that many of the relatives of the members were absent on military duty, it was thought fitting to give up the banquet this year, which in the past has been one of the features of the meeting. It was also deemed advisable to re-elect the same officers for the coming year. Accordingly the officers for the coming year will be: President, Joseph W. Dowling, of Caverhill, Learmont & Co., Montreal; vice-president, Samuel R. Kennedy, of Kennedy Hardware Company, Toronto; executive committee, George C. Davis, of Frothingham & Workman, Montreal; H. Edmund Dupre, of Chinic Hardware Company, Quebec, Que.; Norman Howden, of D. H. Howden & Co., London, Ont.; Robert Starke, of Starke, Seybold & Co., Montreal; Thos. M. Birkett, Jr., of Thos. Birkett & Sons, Ottawa; secretary, James Hardy, Toronto.

New Firms

Iddlesleigh, Alta.:—R. B. Wilkinson is starting a hardware business here.

Business Changes

Toronto, Ont.:—Imperial Hardware & Electrical Co. has sold out to W. R. Fenton.

Bowmanville, Ont.:—J. McIntyre, of Whitby, Ont., has purchased the stock of the Martin Hardware Co. Whether Mr. McIntyre will continue to keep the Bowmanville store running has not yet been announced.

Pathlow, Sask.:—The Dutton-Wall Lumber Co. has purchased the hardware business of J. H. Millard and will operate the business in conjunction with their lumber yard.

Personal

Gordon Seybold, general manager Cochrane Hardware Co., Sudbury, was a recent visitor at Montreal, Toronto and Hamilton.

W. J. Carter, Picton, Ont.; W. F. Macpherson, Prescott, Ont.; C. W. Conn, Tillsonburg, Ont., were in Toronto on Monday attending a meeting of the Advisory Committee, Ontario Retail Hardware & Stove Dealers' Association.

Arthur F. Hatch, general manager Canada Steel Goods Co., Hamilton, has for the past two weeks been confined to his home through illness.

W. T. Thompson, formerly with Marks, Claret & Dobie, Port Arthur, Ont., has been appointed assistant to Gordon Seybold, general manager, Cochrane Hardware Co., Sudbury.

The Stanley Steel Co., Hamilton, will shortly start operations. It will be conducted under the management of Mr. Marwick, formerly of the cold rolled strip steel department of the Stanley works, New Britain, Conn.

Capt. Frank Ross Newman, who went to the front on the outbreak of the war, and has been in the trenches all that time, is reported wounded for the first time. When war broke out he was manager of the Canadian Fairbanks Morse Co., Ltd., in Toronto.

F. M. Tobin, Woodstock; H. P. Hubbard, of the E. C. Atkins Co., Hamilton, were in Toronto on Monday, and along with Jno. Billinghurst, of Boeckh Bros. Ltd., Toronto, met the Advisory Board of the Ontario Retail Hardware & Stove Dealers' Association.

New Incorporations

Hamilton Brass Ltd., Hamilton, has been incorporated with a capital of $40,000.

W. E. Clark, Ltd., Toronto, Ont., has been incorporated with a capital of $40,000, to manufacture brass, steel, iron and metal products.

National Bronze, Iron & Engineering Works. Ltd., has been incorporated with $750,000, to carry on the business of mechanical and electrical engineers.

Graphite Products Ltd., has been incorporated at Ottawa with a capital of $500,000 to purchase and develop graphite mines. Head office is at Montreal.

The Canadian Lamp & Stamping Co., has been incorporated at Ottawa with a capital of $100,000 to manufacture steel and other metal products at Ford, Ont.

Industrial Notes

Toronto, Ont.—The Canadian National Carbon Co. will build a factory here.

Orillia, Ont.:—Mowry & Son, Ltd., foundry, have sold out to the E. Long Mfg. Co., Orillia.

Calgary, Alta.—The Calgary Silver Plating Works has been organized here.

Sherbrooke, Que.—The Iron & Metal Supply Co., of Montreal, may locate a plant here, if satisfactory arrangements can be made with the City Council with regard to power, rates, etc.

Windsor, Ont.—Engineering plans for preliminary construction of the steel plant at Ojibway are nearing completion, although it is unlikely any actual building of mills will be started before next spring.

Kitchener, Ont.—The Canadian Buffalo Forge Co. has started work on additions that will double their capacity. The improvements will cost over $100,000. It is expected to have the building completed by December 1st. The new building will be 150 ft. by 100 ft.

Galt, Ont.—A permit has been taken out for an addition to the plant of the Wells Bros. of Canada, manufacturers of taps and dies, on Front Street. The addition will be 30 by 40 feet, of two storeys and constructed of brick. The estimated cost of the new building is $2,000.

St. John, N.B.—The first unit of the T. McAvity & Son new plant at St. John, N.B., is now completed, and operations are under way looking to the output of a small order of 8-inch shells. As soon as the latter are finished, additional equipment, now being installed, will, with that already in service, start on a large contract for the machining of 9.2-inch shells.

Galt, Ont.—The decision of the Dodge Metal Hose Co., of Canada, Ltd., to erect a $50,000 plant here assures another new industry for Galt. The company is organized under Dominion charter, with an authorized capital of $150,000. The company will manufacture malleable iron hose to replace rubber hose used to couple air line between railway cars, and also has Canadian patents on five other articles.

Kingston, Ont.—The smelter and mine belonging to the North American Smelter Co., has passed into the hands of a New York syndicate on a lease with option to purchase. Repairs have already been begun on the smelter and it is hoped to have it in active operation by December 1. The company which has taken over the property has been incorporated and will probably be known as the Kingston Smelting Co. Alexander McKinnon is the engineer in charge.

Retailers May Hold Exhibition

Next Convention of the O.R.H. and S.D.A. to be Held at Toronto or Hamilton — Dates and Place to be Decided Upon Next Month.

IT is possible that the Ontario Retail Hardware and Stove Dealers' Association will hold a hardware exhibition in conjunction with the 1917 Convention.

The question was discussed at a meeting of representatives from the Canadian Hardware Manufacturers' Exhibitors' Association and the Ontario Retail Hardware and Stove Dealers' Association, held at the Queen's Hotel, Toronto, on Thanksgiving Day. The manufacturers were represented by F. M. Tobin, secretary; H. P. Hubbard, of E. C. Atkins Co., Hamilton, and John Billinghurst, of Boeckh Bros., Toronto. The Retail Association was represented by President W. J. Carter, of Picton; Secretary W. F. Macpherson, Prescott, Ont.; C. W. Conn, Tillsonburg, Ont.; Jno. Caslor, Toronto. The retailers feel that they are entitled to a portion of the proceeds derived from the rental of the booths for exhibition purposes. The proceeds thus secured are to be used for development work in the association.

The Exhibitors' Association have the matter under consideration, and it is expected that another meeting will be held in a month's time to try and arrive at some agreement satisfactory to both parties.

If an agreement cannot be reached between the two branches of the trade, the retailers, it is claimed, will undertake to put on an exhibition along the lines followed at the Peterborough, Guelph and London joint exhibitions and conventions held some years ago. It was the feeling of the Advisory Committee of the Retailers' Association that in any event an exhibition will be held at the same time as the next convention.

It is possible that the convention will be held in March instead of in February, as in previous years.

Toronto or Hamilton

Where the convention will be held has not yet been decided. It is altogether probable that Toronto or Hamilton will be selected as the convention city. The date and place will be decided next month.

With the usual convention dates only about four months distant, the officials of the Retailers' Association are naturally anxious to start as soon as possible in the work of preparation. If an exhibition is held it will entail a large amount of preliminary work, which must be undertaken well in advance of convention dates.

Paint Case Revived

Following the meeting of the representatives of the Exhibitors' and Retailers' Association, the latter held a meeting to dispose of routine business.

Morris Phillips, Bloor Street, Toronto, submitted a report of the proceedings of the prosecution in the Eaton paint case. Mr. Phillips outlined the proceedings from the time he purchased the paint, in February last, up to the time when the case was dismissed in the Toronto Police Court in September.

There was some discussion over the attitude of the manufacturer of the paint towards the retailers. It is probable that more will be heard regarding the case at the coming convention.

Secretary Macpherson announced that some new sheets for the members' price book were in course of preparation, but owing to the unsettledness of the markets and the many changes which have been taking place of late in lists and discounts, the sheets had been delayed. It was pointed out that the price book is being used extensively throughout the province. A great many letters have been received from retailers expressing their appreciation of the price book, which they stated filled a long-felt want.

During the next few months efforts will be made to increase the membership of the association.

Trade Inquiries

The Department of Trade and Commerce has received the following inquiries relating to Canadian trade. Addresses may be secured from the Department, or from the Editor, Hardware and Metal, Toronto, Canada. Please quote reference number when requesting addresses.

1166. **Razors.**—A firm in Omsk, Russia, would like to receive quotations from Canadian firms manufacturing chief razors.

1167. **Motors and agricultural machines.**— A general machinery agent in Omsk, Siberia, desires to receive catalogues and other particulars from Canadian manufacturers of motors, tractors, automobiles, installations for flour mills, oil presses, threshing machines, etc. Further particulars may be had on application. (Refer File No. 16216.)

1169. **Representation for Siberia.**—A commission agent with headquarters at Omsk and with connections throughout Western Siberia would like to be put in touch with Canadian firms desirious of appointing an agent for this territory.

1174. **Trade with Switzerland.**—A Swiss firm would like to receive quotations, catalogues and current prices for the following articles for importation into Switzerland: -

Department "A."—Household effects of all kinds, hardware, tools, machinery, porcelain, glassware, cutlery, covers, German silver, fancy articles, souvenirs, art pottery, enamelled goods, vases, sculptures, ivory and woods, fine toys, machines, jewellery, chains, watches, alarm clocks, clocks.

Department "C."—Woods, metals, wood for brushes, sabots, soles, tubs, pails, packing cases, casks, ladders, screws, bolts, crew-nuts, nails, cramp-irons, hardware, tools, tin goods, galvanized iron, boxes, cans, cases, rockers, oven, stoves, asbestos, hemp, hair, blankets, dusters, dishcloths.

1223. **Agent.** — An English manufacturers' agent having offices in London, Manchester and Leeds dealing with wholesale and manufacturing trades only, would like to communicate with Canadian manufacturers, with a view of carrying lines on a commission basis.

1231. **Iron wire, galvanized barbed wire, wire nails, etc.**—A Leeds firm is open to buy carload lots of galvanized barbed wire, galvanized fencing strand wire, and wire nails, and are also interested in galvanized staples and iron wire.

1232. **Toys.**—A well-known firm in Barbados makes inquiry for Canadian toys.

1233. **Agencies.**—A firm of manufacturers' agents with offices in London and the West Indies, desires agencies for Canadian manufactured goods in hardware lines, including cordage and enamelled ware.

*Included in the list of articles the importation of which into the United Kingdom is prohibited except under license from the Board of Trade, London. For further information apply to the Department of Trade and Commerce, Ottawa.

METAL SHORTAGE IN GERMANY

The State Railway authorities at Hanover have invited tenders for various railway material wanted for the second half of the current year. They required altogether 3,408 tons of bar and hoop iron and 1,266 tons of iron sheets. Very few offers were received, and such is the general scarcity of material that, probably for the first time in the history of the State Railways, there were no tenders at all for quite a large number of items. For example, no quotations were received for 40 tons of bar iron, best wrought iron (for stays, chains, rivets, and bolts), 31 tons of nut iron and hexagonal ingot iron, 376 tons of stay, rivet, and chain iron, and 6 tons of flat iron.

NO WONDER

France and England first undertook to manufacture the modern dyes, aniline dyes—made from the petroleum that was stored in the ground millions of years ago. Germany, a little late, started competition, and in four years had conquered and was making 90 per cent. of all aniline dyes of the world.

No wonder the Germans, with their army problem, monopolized the dye manufacturing with savage energy.

When you manufacture aniline dyes, you get a plant for producing the high explosives. And the Germans have need and use those high explosives.

—*Paint and Varnish Record.*

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

Prices are still soaring upwards and advances have been recorded this week on tin, solder, files, screen wire, fish lines, tire and stove bolts, iron rivets and burrs, crow bars, galvanized sheets, squares, hammers, levels, vises, screw and strap hinges. Prices on washing machines have been withdrawn. A new and higher list, it is understood, is being prepared. In the meantime prices are quoted only on application. The demand for steel is as insistent as ever.

The United States Steel Corporation this week reported unfilled orders aggregating 9,522,584 tons on the books of the subsidiary companies at the close of business September 30. This is a decrease of 137,773, tons during the month of September. The total shipments last month are estimated to have been 1,050,000 tons. If the subsidiary companies had been able to handle all the business offered, the sales would no doubt have been greater than the record sales of March, 1916.

The linseed oil market is holding steady. White lead in oil is very firm, and mixed paints as a result of high prices on oil and white lead are exceedingly firm.

Business in hardware lines is good and there is a fairly heavy demand for all seasonable lines despite the unprecedented high prices now prevailing. The only decline noted this week is in poultry netting for spring booking.

MONTREAL MARKETS

MONTREAL, Oct. 11.—The increase of ten cents per hundred pounds on iron, and thirty cents per hundred on steel, is noted as the main feature of the metal markets in Montreal this week, following the Thanksgiving holiday. All metals are in firm markets at present, and many lines of shelf hardware have gone up, notably tire and stove, bolts, nuts, and screws. Cold weather has given a brisker tendency to the buying of seasonable lines. Stoves are in very keen demand. Storm window hangers are being asked for continually. Glass and putty are being called for and there are hints still unrealized of higher prices. Wood screws, as announced in a special panel last week in HARDWARE AND METAL, have advanced in price, the prices having been duly given last week. Sheet and rod brass went up lately, now brass wire has been advanced.

Again the market calls in vain for files, and a hint of warning is whispered by the inside sources of trade information, that a rise in prices of files is about to become noticeable in the Dominion. This following the rise in price of steel would not be surprising..

Iron Goes Up Ten Cents Per 100 *Lbs.*

Foundry Product Finds Very Firm Market in Montreal as Elsewhere

PIG IRON.—Just following Thanksgiving Day, the hardware trade in Montreal was made aware of the fact that iron had gone up ten cents per 100 lbs., and every indication on the market was for firmness in iron to continue. Pig iron was being quoted in Montreal at about $23 per ton. The effect of the increased cost of iron was, however, more apparent in its bearing on the manufactured products in steel than in any direct transactions in pig iron, most pig iron business being across the border. Common bar iron is quoted in Montreal at $2.90 per 100 lbs., and refined iron $3.15 per hundred.

Steel Follows Iron Up Thirty Cents

STEEL.—Following a ten cents per 100 lbs. raise in the price of iron, all steel products are again raised by thirty cents per hundred pounds. Mild, band, sleigh-shoe, and domestic steel are all $3.50 per 100 lbs. Tire steel is $3.80. Toe calk steel, $4.50; reeled machinery steel, and spring steel are quoted now at $4.80. The firmness in iron and steel may lead to further increases in hardware lines dependent on steel.

Sad irons are quoted firmer in two well known lines as per current quotations, Mrs. Potts' No. 55, polished, being now $1.05 per set, and No. 50, nickel-plated, $1.10.

Tin in Demand Prices Varied

Firmer Feeling in Some Quarters as Regards Tin

TIN.—While some men on the market considered tin accessible at 43c per lb., which is below quotations for last week, others found tin still firmer and up two sents a pound above last week's quotations, which were $46. There was certainly a strong demand for tin in some sections of the market, and though this might have been only a temporary condition, it had its effect on the metal market for Thanksgiving week-end.

COPPER MARKET IS STILL VERY STRONG

COPPER.—Quoted last week at 32½ to 33 cents, and unchanged in price this week, copper was nevertheless in very firm market, indeed, in all quarters. Influences from across the border were all towards greater firmness. Demand in Canada kept good, and transactions at the firm prices were being made. Nor were there any indications that prices would ease off at all, but rather to the contrary in respect of copper.

LEAD AND SOLDER FIRM AND STEADY

LEAD AND SOLDER.—Lead on the Montreal markets was unchanged in price from last week quotations, running from $9 to $9.75, with some suggestion that lead might be secured at lower than $9 if purchased in large lots. The market was not disturbed in any way, but kept very firm, and prophets of higher prices were not lacking here and there. Solder, both tinsmith's and wiping solder, remained steady as last week, at 29 cents for the first named, and 26 cents for the second, both in good demand and fair supply.

A BRISKER DEMAND FOR ANTIMONY NOW

ANTIMONY.—With the sources of supply in China and Japan presenting a market in which prices are declared to be higher than they are on the American continent to-day, the antimony market in Canada is not active except for small orders. It appears that the munition making demand for antimony is dulled out of existence with the falling off in shrapnel orders, but for general and usual uses as in the making of bearing metal, there is quite a general demand for antimony in small quantities. The price is 14 cents in Montreal at present.

SPELTER IS IN A FIRMING MARKET

SPELTER.—In what is described as a very firm and strong market, spelter is quoted this week at prices ranging from last week's figures of 16 to 16½ cents to shades higher. Opinions vary on the market as to the size of purch ases necessary to secure the somewhat easier shadings here and there hinted at, and the tendencies of the market were towards firmer conditions. Sheet zinc ranged from 23 cents for large orders to 27 cents, with firmness as the characteristic feature of the market.

Brass Wire Goes Up Considerably

A thirty-five per cent. (35%) increase on brass wire prices is recorded in Montreal this week. Formerly brass wire was quoted at 25 per cent. off list. Brass snare wire prices are altered now for all four most familiar numbers, as follows: No. 20 is now 74 cents (No. 20 used to be 66 cents), No. 22 is 75 cents, No. 24 is 80 cents, and No. 26 is quoted at 93 cents. Other lines of brass wire and brass wire goods are correspondingly worth more on the market to-day.

Shelf Hardware is Still Going Up

Bolts, Nuts, and Screws Reflect the Tendencies of Iron

Shelf hardware has followed the trail of iron during the past week, and several important lines will be found higher priced. Stove bolts, which were formerly 62½ per cent. off list are now 60 per cent. off. Tire bolts, formerly 50 per cent. off, are now 45 per cent. off. Rivets, formerly 37½ per cent. off list, are quoted to-day at 35 per cent. off. Set screws are now 40 per cent. off instead of the former 55 per cent. and 5. Square head and hexagon cap screws are now 35 per cent. off. They were formerly 45 and 10. Finished, and semi-finished hexagon nuts in sizes up to 1 inch, are now 30 per cent. and 10. Up to 1½ they are 25 per cent now.

Coil Doorsprings Up

An increase in prices of coil doorsprings, no doubt due to the general tendencies of spring steel, is noted this week in Montreal. Numbers from 1 to 7 show an average increase of ten per cent.

Machinists' Vises Costlier

Again, because of the upward trend of iron and steel, the price of machinists. vises, all lines are quoted firmer by at least a dollar on each vise.

Crowbars and Clawbars Up

Both crowbars and clawbars are quoted higher this week. They are now $4.50 per 100 lbs. for crowbars, and $6 per 100 for clawbars.

Fishlines Higher

The upward tendency in yarns has brought about a ten per cent. increase in all numbers of Herring Twines and Cod Lines quoted in the trade. About fifty numbers or more are affected. Rope pirces remain as previously, but firmness is apparent in all these goods, and further increases in price would surprise no one.

Brushes May Go Up Again

The warning to look out for higher priced brushes of every kind, from household to paint brushes, has been sounded in at least one quarter of the hardware trade field this week. As may have ben observed in last week's HARDWARE AND METAL, some reasons for the possibility of an increase were given.

Black Screen Wire Cloth Up

An increase in price of black screen wire cloth to $2.35 per 100 square feet, as compared with the $2.25 price of a week ago, is reported.

Files Very Scarce

Never was there such a scarcity of files. Wholesalers would welcome the discovery of a forgotten store of 10-in., 12-in., and 14-in. mill, and flat bastards (the munition trade demand), but where are they? When found they may be higher priced, some say.

TORONTO MARKETS

TORONTO, Oct. 12.—A number of further important price changes have taken place this week in the hardware markets. Prices have been advanced on some lines of galvanized sheets, rivets, burrs, tire and stove bolts, files, squares, hammers, levels, vises, screw and strap hinges, screen wire cloth. Prices on washing machines have been withdrawn.

Steady Advance of Prices

The steady advance in prices of practically all metal goods has again become a question of considerable importance in the hardware trade. New high levels are being reached in steel and iron products, which is reflected in all lines of hardware. Cost of production is also higher on account of increase in prices of materials and also higher wages. Signs are wanting of any relief in the situation, and indications point to still further advances. High prices, however, under prevailing conditions are not so important as deliveries. In the case of steel, the mills are getting behind all the time on delivery, and specifications have to be prepared months ahead of the time when the steel is required.

The prospect of higher prices of steel product has caused an increased demand, as consumers are anxious to cover for their requirements, fearing further advances. The total output of steel for this year has been estimated at 1,500,000 tons, as compared with 1,350,000 tons in 1913, the previous high record. Notwithstanding this big increase in output, the prevailing shortage of steel will continue for the rest of this year and for a considerable part of 1917, unless anything unforeseen happens. One prominent steel company is turning out steel billets at the rate of 15,000 tons a month, more than twice the amount produced a year ago. There is no improvement in the situation as regards steel rails. It is reported that U. S. mills have turned down an inquiry from Canada for 22,000 tons of rails, as the rail making mills for this and next year have been booked to capacity. Under the circumstances it looks as if the proposed removal of the tariff off rails would not relieve the situation. So much steel is required for munitions that the Canadian rail mills cannot accept orders for rails.

Pig Iron Firm

The pig iron market continues very firm, and the general situation unchanged. Production is steadily increasing, the greater part being used in steel making, although the demand for foundry grades is showing some improvement. Quotations on Canadian pig iron are unchanged in the meatnime, but an advance is looked for shortly. Gray forge has again advanced, and is now quoted at $19.95 Pittsburgh.

Old Materials

Although the market for old materials has recently developed considerable firmness, there have been no price changes during the week. The situation continues satisfactory, and business is keeping up well. Higher prices on scrap copper, brass and zinc are expected in

the near future. Prices are shown in the current quotations.

Metals Generally Are Firmer in Price

The situation in the metal markets has recently shown considerable improvement and prices are generally firmer. Copper continues to hold the lead in point of interest, and the market is still very strong. It is intimated by some copper authorities that the order recently placed by the Allies ran in excess of 500,000,000 pounds, and not 448,000,000 pounds as previously stated. Lead, spelter and antimony are stronger at unchanged quotations, but a sharp advance has been made in tin owing to the fear that shipments may be interfered with by submarines, which have recently been active along the New England coast.

Copper Strong

The market continues very strong, without any change in the situation. Producers report that the demand is less urgent. Domestic consumers are now pretty well covered for the first half of next year, and the Allies have covered for their requirements for several months, which indicates that there will be less activity in the market until another buying movement develops. Copper producers are increasing their output all the time, but they have been unable to keep up with the demand; it is probable, therefore, when new buying does develop, higher prices for copper will result. Local quotations are firm and unchanged at 31c for electrolytic and lake, and 30 cents per pound for casting copper.

Sharp Advance in Tin

Good business is being done for future delivery, especially for the first quarter of next year. It is also reported that some large users are sounding the market on tin for delivery in the second quarter of 1917. The recent submarine activity off the New England coast has created some scare in the tin market, and prices have advanced 3 cents per pound. Local price 47 cents per pound.

Spelter Firmer

The situation in the spelter market has improved, and indications point to higher prices. There has been a good demand recently from speculative interests and the market is more active. Local quotations in the meantime are unchanged on 12c per pound.

Lead Firm

The market is quiet, but very firm; the Trust price of 7c New York is well maintained. A fair demand is reported, and most dealers have very little October lead available. It is reported from New York that the Canadian Government is expected to come into the market very soon. The recent inquiries put out by Canada failed to develop into business, as the buyers thought the prices were too high. The price locally is 9¼c lb.

Antimony Stronger

The market is stronger, due to increased demand required for munitions. Local quotation unchanged at 18 cents per pound.

Aluminum Firm

A good demand for aluminum is reported, and the market is firm at 68 cents per pound.

Advance in Solder

The sharp advance in tin and continued strength in the lead market has resulted in higher prices on solders, which have advanced 2c per pound. The new prices are given in the current market quotations.

Premier Sheets Advance in Price

Premier galvanized steel sheets have advanced 25c per 100 lbs. this week. The new prices now in effect are (per 100 lbs.):—10¾ oz., $6.75; U. S., No. 28, $6.45; U. S., No. 26, $6.15; 22 and 24-ga., $6; 18 and 20-ga., $6.10; 14-ga., $5.55., f.o.b. Hamilton and Toronto. An advance in galvanized sheets has been expected for some time past. HARDWARE AND METAL has on several occasions of late referred to the strength in the market. Last week's report stated in part as follows:—"The market for galvanized sheets in the United States is considerably stronger, and higher prices are anticipated, in which case an advance may be looked for in this market. The reason for the renewed strength is the unusually heavy demand, and also because of the continued high cost of black sheets. As sheet bars will be higher for fourth quarter delivery, sheet prices will no doubt be advanced in the near future."

Poultry Netting Prices Have Declined

One of the few exceptions to the general advancing prices is that of poultry netting. A decline of approximately 12 per cent. has been recorded during the week. The former discount was 25 per cent., with some wholesalers fixing the discount at 33 1-3 per cent. The new discount on 1-inch and 2-inch regular mesh is 30 and 10 per cent., while the American pattern mesh carries a discount of 30 per cent. off list. Declines have been so seldom in recent months that the hardwareman rather looks upon them as an oasis in a desert of generally advancing prices.

New Discounts on Rivets and Burrs

A further advance in rivets, both black and tinned, has taken place during the week. The new discount is 35 per cent., as opposed to the former discount of 37½ per cent. Burrs have also shared in the advance, and the discount is the same as that for the rivets. Advances in raw materials and labor are stated to be the factors operating to cause the advance.

Bolts Have Advanced

Stove bolts and tire bolts are among the articles that have shared advances. On the former the new discount is 60 per cent., as opposed to the former discount of 62½ per cent. Tire bolts are now quoted at 45 per cent. discount off list. The former price was 50 per cent. off list. On stove bolts, the advance is practically 6 per cent. and on tire bolts 10 per cent.

Standard Brands of Files Have Gone Up

There has been a change in the discount on Great Western, Kearney & Foot, J. Barton Smith, McClellan, Delta, Globe and Vulcan brands of files. The new discount provides for 65 and 5 per cent. off list, whereas the former price was 65 and 10 per cent. off list. Nicholson files remain unchanged at 55 per cent. off list. This advance has taken place, due to the scarcity of raw materials, and was forecast in HARDWARE AND METAL some weeks ago.

Prices on Washing Machines Withdrawn

Canadian manufacturers have withdrawn all prices on washing machines, pending a new list price and discounts to be issued. Prices will be given only on application. The new list will provide for an advance. This is in line with forecasts made in these columns some time ago. In common with other manufacturers the makers of washing machines have found it necessary, in the face of advancing prices in raw materials and labor, to take up and join in the chorus of advancing prices. The new list is expected to be issued in the near future.

Squares, Hammers, Etc., Advance

An increase of approximately 10 per cent. in all lines of the Stanley Rule and Level Company goods was recorded during the week. This affects squares, levels, hammers, vises, calipers and all goods manufactured by the concern in question.

Screw, Hook and Strap Hinges Go Up

An advance of 8 per cent. on screw hook and strap hinges in sizes up to 12 inches went into effect during the week.

The actual advance was 50c per 100 pounds. These sizes formerly sold for $6, and are now quoted at $6.50. In sizes from 14 inches up the new price is $6, which makes the actual advance 75c per 100 pounds. This is a 12 per cent. advance. The reason assigned is the same as the general cause for advances.

Black Screen Cloth Up

A new price has been named for black fly screen cloth, which provides for a substantial advance over recent quotations. It is now selling at $2.35 per 100 sq. ft. in 100 ft. rolls, and $2.40 per 100 sq. ft. in 50 ft. rolls.

An advance of 1c per pound on horseshoe nails went into effect during the week. No. 3's are now selling for $4.25, less 10 per cent. discount. In the 25-lb. boxes it means an advance of 25c. This advance is in line with the firmness in other classes of nails, which are expected to advance in the near future. Following are the new prices on the various sizes (per pound):—No. 3, 1⅝-inch, 76c; No. 4, 1¾-inch, 36c; No. 4½, 31c; No. 5, 1 15-16, 16c; No. 6, 2½, 15c; No. 7, 2 5-16, 14c; No. 8, 2½, 14c; No. 9, 2 11-16, 13c; No. 10, 2⅞, 13c; No. 11, 3 1-16, 13c; No. 12, 3¾, 13c, London. Hamilton, Montreal, Toronto, less 10 per cent and 5 per cent.

Sash Cord and Cotton Rope Go Up Again

An advance of approximately 2c per pound went into effect on Thursday of this week and 1c per pound on cotton rope. This makes the second advance within the past month. The increase has been caused by the firmness and advancing price in the ra wcotton market. The raw material is now quoted at 17.55c per pound, which is a new high record for spot cotton. Indications seem to point to 20c cotton, as predicted by some authorities who are in a position to forecast conditions. Twenty-cent cotton is in the same category with $2 wheat. The new prices that prevail are as follows:—Cotton rope (per lb.)—¼-inch and larger, 31c; 3-16-inch, 32c. Sash cord (per lb.)—Nos. 8. 9, 10, 12, 39c; No. 7, 39½c; No. 6, 40½c.

Rope and Twine Firm

Business in rope and twine continues in steady demand. In fact, for the hemp wrapping twine business might be termed good. There is large orders going into use by mercantile concerns for use in tying parcels shipped by parcel post and express. Prices on both commodities hold firm, as shown in current market quotations.

LONDON MARKETS

LONDON, Oct. 12.—A large number of price changes have taken place this week. The new budget of changes is very heavy considering the many changes which were reported last week. Business here is good and merchants are buying freely despite the high prices. The scarcity of many hardware lines is being keenly felt. There promises to be a great scarcity of cutlery for the Christmas trade this year. Razors are very scarce at present.

Clocks and matches are scarce. Some factories state they cannot make shipments for at least two months from date of order. Spring prices on poultry netting. are out for spring .

S and S Hinges Higher.

An advance has taken place in the price and screw and strap hinges. The prices now are 12 in. and smaller, 6½c lb.; 14 in. and larger, 6c lb.

House Brooms Advanced.

House corn brooms have gone skywards and an advance of about 25 per cent. has gone into effect. Lines formerly selling from $3 to $5.50 doz. are now quoted at $4 to $6.50 doz.

Spring Prices Are Out

Spring prices are out for poultry netting and screen wire cloth. Wire cloth in 100 ft. rolls is quoted at $2.35 per 100 sq. ft.; 50 ft. rolls, $2.40 per 100 sq. ft.

Poultry netting for 1 in. and 2 in. for spring booking is quoted at 30-10 per cent.

Files Advance in Price.

The advance in files predicted by HARDWARE AND METAL has gone into effect. Globe files are now quoted locally at 65 per cent. off list; black diamond at 50 per cent. off list.

Wood Screws All Advanced In Price

Bright, brass and bronze wood screws have advanced in price. This change was reported in a special panel in last weeks issue of HARDWARE AND METAL. The announcement of the advance took place just as HARDWARE AND METAL was going on the press. The new discounts are as follows:—
Flat head, bright, 77½ per cent.; round head, bright, 72½ per cent.; Oval head, bright, 72½ per cent.; Flat head, brass, 45 per cent. Round head, brass, 42½ per cent.; Oval head, brass, 42½ per cent.; Flat head, bronze, 37½ per cent.; Round head, bronze, 35 per cent.; Oval head, bronze, 35 per cent.

Stove and Tire Bolts Go Higher

New discounts have been announced on stove and tire bolts and iron rivets and burrs. Stove bolts are now 60 per cent. off list, tire bolts 45 per cent; iron rivets, 35 per cent.: iron burrs, 35 per cent.

The new price on a 5 lb. package of coppered rivets and burrs assorted net at $1.43 for the 5 lbs.

Iron Handles Higher.

Mrs. Potts' iron handles have advanced. The new quotation is 90c dozen.

Iron Pipe Advances One Point

New prices have gone into effect here on iron pipe. The new prices appeared in a panel in last week's issue of HARDWARE AND METAL and are now shown in the current market quotations.

Nails and Wire Firm

Wire nails are firm at $3.80 base. Cut nails are quoted at $3.40 base.

All fence wire is firm at present prices. Quotations are as follows per 100 pounds:
Barb, $4.25; No. 9 galvanized, $3.90; No. 12, galvanized, $4.05; No. 13 galvanized, $4.15; No. 9 coil spring, $3.95; No. 10, O and A $4.41; No. 11 O and A, $4.46 ; No. 12, O and A, $4.55.

Rope Firm At Former Prices

There is a fair demand for rope and prices are firm at the following:—
Pure Manila, 22½c per lb. base; British Manila, 18c per lb. base; African Hemp, 18c per lb. base; Sisal, 15½c per lb. base; Cotton 3-16, 31c per lb. base; Cotton ¼ and larger, 30c per lb. base.

Linseed Oil Firm At High Figures

Linseed oil is still quoted at the high figures of last week. There is only a fair demand at present: Quotations are as follows:—1 to 2 bbls., raw $1.05 per gal.; boiled, $1.08 per gal.; 3 to 5 bbls., raw $1.04 per gal.; boiled $1.07 per gal.; 6 to 9 bbls, raw $1.03 per gal.; boiled $1.06 per gal.

Turpentine remains at 71c per Imperial gallon in single barrel lots; 70c in 2 to 4-barrel lots; 78c in 5-gal. lots. There is a good demand for turps at present.

Good Demand for Glass

There is a good movement in glass. The discounts are as follows:—Single diamond, 20 per cent.; double diamond, 20 per cent.; cut lights, 50-5 per cent. Prices open for 50 cases and over.

Putty remains unchanged at the following prices:—

Standard 100-lb. drums, $3 per 100 lbs.; standard, 25-lb. drums, $3.10 per 100 lbs.; pure, 100-lb. drums, $3.70 per 100 lbs.; pure, 25-lb. drums, $3.80 per 100 lbs.

Snow Shovels Moving

Dealers are buying snow shovels in anticipation of early snowfalls. Prices

at present are as follows:—Common japaned $2.90 doz.; sockeye, long handle, $4.80 doz.; furnace scoops, $5 doz.

White Lead in Oil.

White lead in oil is firm at $13.95 per 100 lbs. in tin lots and $14.25 per 100 lbs. in less than ton lots.

Stove Pipes and Elbows Moving

Stove pipes and elbows are moving freely. Light pattern elbows are quoted, 6 in., $1.33 doz.; 7in., $1.50 doz. Stove pipes bright are quoted 6 in. bright, $12.04 per 100 lengths; 7 in. bright, $12.61 per 100 lengths.

Stove boards, wood lined are quoted at 50-10 per cent.; paper lined at 60 per cent.

Common wood side ash sifters are quoted at $1.75 doz. Weather-strip is moving well at the following prices:—wood and felt, 75 per cent. off; Frost King, $4.40 doz.

WINNIPEG MARKETS

WINNIPEG, Oct. 12.—Following two or three weeks of comparative quiet, a change is noticeable this week, and lines featured in the markets are wrought iron pipe, tin plates, Canada plates, and shovels and scoops. We mentioned last week a probable advance in shovels and scoops, and this has now come into effect. New prices show a sharp advance in this line, and quotations now being made follow: Fox D.H. sqr. pt., and D.H. rd. pt., $9.40 per doz. Bulldog D.H. sqr. pt. and D.H. rd. pt., $10.95 per doz. Black Cat and Scoops—4, $10.15 per doz. Crescent—6, $10.80; 8, $11.50; 10, $12.20. Moose and Jones Scoops—4, $11.20 per doz.; 6, $11.85; 8, $12.50; 10, $13.05.

Tin and Canada Plates Go Higher

Revisions made in the prices of tin plates show that prevailing quotations are on the following basis—I.C., 20 x 28, $14.50 per box; 20 x 33, $17; I.X., 20 x 28, $16.

At different times it has been brought to the notice of readers that an advance in Canada plates could almost be expected, and our predictions are now verified in to-day's prices:—

	Half Polished. Per box.	Full Polished. Per box.
18 x 21	$5.25	$6.25
18 x 24	5.25	6.25
20 x 28	5.50	6.50

These revisions in the price of Canada plate will undoubtedly bring about a further change in quotations on patent and riveted pipe and stove pipe elbows.

Linseed Oil On Upgrade

Activity has been the by-word with linseed oil during the past three weeks, and, following a drop in prices, four or five advances have been recorded, and new prices being made to-day are at an extremely high level. Quotations now being made on linseed oil are as follows: Raw, $1.11 per gal. barrel lots; boiled, $1.14 per gal. barrel lots.

Wood Screws Advance in Price

Following on recent advances in the prices of nearly all steel and brass goods comes advice and new discounts being made on wood screws. These discounts are given herewith:—F.H. bright screws, 67½ per cent.; R.H. bright screws, 62½ per cent.; F.H. brass screws, 32½ per cent.; R.H. brass screws, 30 per cent.

Wrought Iron Pipe Prices Revised

It was stated in the opening paragraph that wrought iron pipe had again come under revision. The new quotations are on an advanced basis as follows, per 100 feet:—

Per 100 Ft.—	Black	Galvanized
¼ inch	$ 3.87	$ 6.30
⅜ inch	3.96	6.39
½ inch	5.09	6.89
¾ inch	6.21	8.60
1 inch	9.14	12.74
1¼ inch	12.32	17.19
1½ inch	14.76	20.57
2 inch	19.90	27.68
2½ inch	31.42	43.74
3 inch	41.04	57.15
3½ inch	49.41	....
4 inch	58.50	....
4½ inch	73.22	....
5 inch	85.40	....
6 inch	110.70	....

Other lines on which changes have been recorded are as follows:—Asbestos paper, 10, $7.50 per 100 lbs.; 14, $7.50. Asbestos wick packing, $1 per 100 lb. Side roof pipes—6, $6.50 doz.; 7, $6.50. Ridge roof pipes—6, $6.50 doz.; 7, $6.50.

It is now stated, after a long period of uncertainty, jobbers will be in a position to supply a quantity of blue stone for spring shipment. No prices have been made as yet, but it should be advisable for all retailers who require this commodity to cover for their necessities at once, to avoid possibility of their orders being turned down later owing to shortage of supply.

Spring orders for mixed paint at to-day's prices are being taken, and, in view of the uncertainty of the oil and lead market, this would seem good buying. Further advances before spring may almost be expected unless something totally unexpected crops up.

HARDWARE LETTER BOX

Carriage Castings

J. L. Demers, Thetford Mines, Que.:—Please give me the name of the manufacturer of carriage castings at Smith's Falls. Also kindly give me the address of the Ontario Malleable Casting Co.

Smith's Falls Malleable Castings Co., Smith's Falls, Ont.; The Ontario Malleable Casting Co., Oshawa, Ont.—Ed.

R. A. Wells, Dresden, Ont.:—Where can I secure a coal bottom grate for a Walker Brilliant No. 14 stove? Hall & Zyrd Foundry Co., Hespeler, Ont.—Ed.

Show Card Brushes, Etc.

Henderson Bros., Vanguard, Sask.:—Please advise us where we can secure show card brushes, pens, colors, etc. Hughes Owen Co., Winnipeg; Art Metropole, Toronto; Art Emporium, Montreal; E. Harris Co., Toronto.—Ed.

Fitch & Schroder, Odessa, Sask.:—Please advise name of maker of Modest heater.

Can any of our readers kindly supply this information.—Ed.

TO STOP INFLATION

In view of the enormous rise in the price of shellac, both in London and in Calcutta, in consequence of speculation, the Government is considering what steps should be taken to put a stop to this inflation of the price of a commodity which is required for military purposes.

—The Ironmonger.

USING CARDBOARD

Cardboard for show cards has advanced tremendously in the past eighteen months. It certainly will advance further. If you have not already laid in a supply to last for several months, you had better do it as soon as possible. You will save money by doing so. Paper makers generally predict that there will be a steady rise and the end is not in sight. Even the ending of the war would not bring down prices materially.

Pass On

A ticket is not an annual pass, nor is an opportunity license. It's merely a chance to make good.

GASOLINE CARRIES GOOD PROFIT

(Continued from page 28.)

ently not large, there is a large profit when the investment in gasoline is taken into account and when the initial cost of the steel tank is distributed over a number of years. There is considerable work in the handling of gasoline, such as that entailed in pumping. But this can be done in the spare time of the clerk without additional outlay. Practically, then, the only loss is the 5 per cent. which garage men agree cannot be obviated through spilling and evaporation.

Gasoline Prices Firm

Gasoline prices in Canada at the present time might be characterized as firm. There has been an enormous consumption, due to good motoring weather. The manager of one of the large oil companies computes the consumption in Canada this year will be from 25 to 35 per cent. greater than last year. There was consumed in Canada last year approximately 60,000,000 gallons of gasoline, or 1,500,000 barrels. This year the consumption will run all the way from 75,000,000 to 85,000,000 gallons. Just at the present time crude Oklahoma oil prices are very firm. Premiums are being paid on the market price of this grade of oil, which indicates there is a scarcity. The Oklahoma oil fields are really the determining factor in fixing the price of oil. It is principally from the high grade crude oil of the Cushing fields in Oklahoma that the gasoline imported into Canada has its origin. "All uncertainty has disappeared," is the way one large oil concern sums up the situation. "The strong crude situation and the comparatively settled conditions in ocean freight rates have stimulated a strong demand all along the line. The market is now quite steady and advancing prices may be confidently looked for. The gasoline situation is very much stronger than for several months past and while low gravity gasoline and heavy napthas have not advanced, the higher gravity gasoline is stronger in price," said the oil company in question.

10c Over Last Year

The vagaries of gasoline prices during the past year are most interesting. In September of last year gasoline was selling in Toronto at 16½c per gallon. At the present time it is selling at 26½c wholesale. From month to month during the year the range of prices have been as follows:—

September	16½c
October	18
November	22
December	24
January	25
February	27
March	28½c
April	28½c
May	28½c
June	28½c
July	28½c
August	27½c
September	27½c

Gasoline Cheap in Canada

Gasoline in Canada is comparatively cheap when the United States product is taken into consideration. The quality of gasoline that is mostly consumed in the automobile trade in Canada is that of 64 per cent. gravity. This gasoline, as previously stated, is selling at 26½c per gallon. This same grade of gasoline is selling in Pittsburg in bulk in car lots at 21c per gallon. But to this amount must be added the difference in cost between the wine gallon measure used in the United States and the Imperial gallon measure in Canada. The Imperial gallon is one-fifth larger in size than the wine gallon. On this basis it would bring the original cost per Imperial gallon at Pittsburg to 25.80c. To this amount must be added the 7½ per cent. war tax, which increases the cost by 1.95c per gallon. Freight from Pittsburgh to Toronto adds another 1.75c per gallon. This brings the cost of the United States product to 29.50c per gallon laid down in Toronto. The actual condition shows that gasoline is selling 3c per gallon under this price. Canadian refiners are apparently satisfied to take a narrower margin of profit than the United States refiners.

AUSTRALIAN ZINC FOR UNITED KINGDOM.

Announcement has been made of a plan by which Australian zinc concentrates, heretofore smelted in Hamburg, will in the future be handled by Great Britain and its allies. According to the *Financial News*, the British Government has agreed to take a large tonnage of Australia's zinc ores during the war and 100,000 yearly for 10 years thereafter. This means that the British spelter capacity will have to be considerably enlarged, and this is already being done by a form of subsidy to manufacturers.

One hundred thousand tons of zinc concentrates would make roughly about 30,000 tons of spelter. In the past, Great Britain has consumed about 195,000 tons of zinc and has produced only 60,000 tons. By taking these Australian ores the output of Great Britain would be in the neighborhood of 100,000 tons, which means that it will still have to depend pretty largely upon other countries. However, the Government has also agreed to lend to Australia about $2,500,000 for the erection of smelting plants in the Commonwealth, and to take yearly 45,000 tons of Australian spelter. This would leave about 55,000 tons to be gotten elsewhere.

EXHIBITION OF ENEMY SAMPLES

The Exhibition of Enemy Goods opened in Montreal a few days ago, represents the concrete realization of the British Government's plans to assist British and Dominion manufacturers in capturing German trade. The exhibit is in charge of H. Kershaw, representative of the British Board of Trade. The 8,000 German and Austrian-made articles in the exhibit were bought in the open markets of the world—70 in all, to be correct. Wherever possible, each article has the wholesale and retail price, place of purchase, and other details affixed. The department is also prepared to give information as to where buyers for any article exist.

Textiles First, Hardware Second

The greatest number of inquiries so far has been for textile lines, and second for tools and general hardware. The quality of most of the latter is poor, and in the words of one visiting manufacturer, "Sheffield would not turn out such stuff." The fact remains, however, that there is a sale for such articles and the Germans built up an enormous trade in just such goods that other nations had not considered worth while. Thus, one knife shown consisted of a sheet iron blade riveted once into a split wooden handle, which in turn was painted in bright colors. This article was meant for use in the African hinterland, and illustrates the German method of giving people what they want and not what the manufacturer thinks they ought to want. Shoes sold in Trinidad had soles of pressed paper, which were glued to the uppers. Samples of some goods, such as textiles, are frequently given to inquiring visitors for a more detailed examination at their factories.

RAPID DRYING PAINT

In the March-April number of the *Bulletin de la Societe d'Encouragement*, a report is given of a rapid drying paint. As many as three coats can be given in one day. The rapid drying is obtained by using, instead of refined linseed oil, linoxine or linseed oil solidified by oxidation such as is obtained in linoline manufacture. This is dissolved in a small quantity of slightly acid amyl alcohol and then a considerable quantity turpentine added. When this solvent evaporates, the paint is completely dry since the oil has been oxidized in advance. What the lasting qualities are time alone can tell, but, in one case, walls coated with the paint show no signs of deterioration after five years. The price in normal times would be a little higher than that for ordinary zinc paint, but the advantages in quick drying would more than make up for the extra cost in many cases where quick drying is an important factor.

PRACTICAL SHEET-METAL WORK

THREE PIECE ELBOW WITH GUSSET OR GORE PIECE.

BY THOMAS STANFIELD

THE problem described in plate 30 is that of a roof hopper, for a flat or deck roof.

This type is the most popular, for the reason that it will not block up even when a thick layer of snow falls on the roof. The holes in the strainer piece are necessary to allow the warm air to penetrate through the snow.

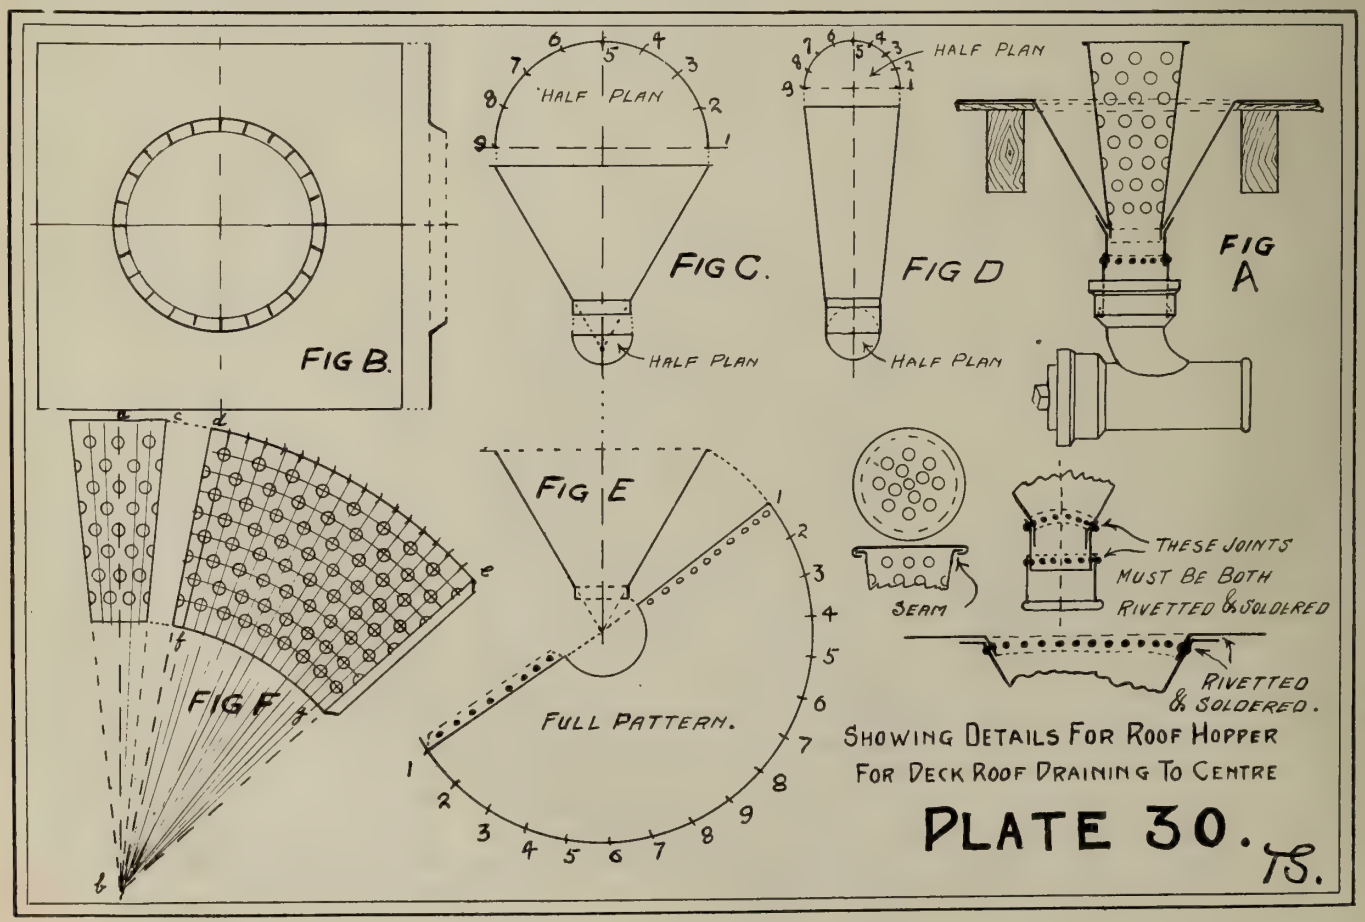
Then the holes at the lower end prevent any large obstructions from getting into the rain water leaders. This strainer piece can be removed as it should be made separately. Fig. A shows how such a hopper is installed when completed.

Fig B. shows the flat flange piece. The hole in centre should be turned or beaten down so as to enable it being riveted to the body Fig. C.

First draw a plan and elevation as shown in Fig. D, divide the half plan into equal number of parts 1, 2, 3, 4, 5, 6, 7, 8, 9.

Fig. F shows how the pattern for strainer piece should be developed as well as method of laying out holes in strainer.

Draw line a, b, which is centre of strainer plan. Place compasses at b and open up to c. Next draw an arc d, e. Then transfer the measurements from half plan Fig. D twice as shown, this gives the total length of sheet metal and shape required for strainer. From these points the holes may be laid out, allow for seam which need not be soldered, this completes the pattern for strainer except that the lower portion at f.g. should be beaten out square and a collar riveted on, this may be of any length required according to diameter of hopper. It is good practice to make these collars the same length as diameter.



Now draw a plan of body as shown in Fig. C, in following the same method as described in Fig. F. except of course that this piece should be both seamed and riveted as well as soldered. Fig. E shows the full pattern for this piece.

The small sections shown to the right describe the best way to make the various joints. It will also be noted that the brass ferrule is riveted as well as soldered.

The guage of material should never be less than 20, if galvanized iron is used, and whenever the acid is used in soldering, it should be tinned, for the reason that where the galvanizing is burned off with the acid, it is liable to rust easily.

Some sheet metal workers use ash-

THE JUNIOR CLERK'S PAGE

What Determination Means to Men

Sticking at it Wins Success—Some Words of Advice for the Young Man Starting Out in Life.

By Dr. Orison Swett Marden.

"NOW, you will acknowledge I can beat you running, won't you?" said a man to a plucky old sportsman whom he had beaten twelve times in succession in foot-racing. "No, sir," was the reply, "I never acknowledge that I'm beat, for I never gives up!"

The way to develop a strong, masterful character is to persist to a complete finish in whatever one undertakes. The art of holding on, of sticking, hanging, never giving up, no matter how great the discouragement, or how dark the outlook, as an indispensable success quality.

The bulldog is the most dreaded of all dogs because when he gets a grip on anything it is almost impossible to choke him off. Even the bull pup shows this characteristic. It is astonishing how much men and women can accomplish by sheer persistence, by that bull-dog tenacity which never gives up.

Success is not in favorable conditions, not in circumstances, not in influence, not in the capital that comes from others, but right inside of ourselves, in the persistency and tenacity of purpose that enables us to hold on in spite of all opposition and discouragement. This sort of bulldog tenacity should be encouraged in the young until it crystallizes into a fixed habit in later years.

There is no other human quality more universally admired than fixity of purpose, the grim determination which never flinches, never shows the white feather, never turns back, but pushes steadfastly ahead when others give up, grips the tighter when others let go. A man that never flinches is everywhere in demand. No matter how many others are out of employment, there is always an advertisement out at the door of every line of human endeavor for the man that can stick and hang, that persists to the end.

Unflinching persistency never goes alone; it is always accompanied by other qualities of the same family, the achievement family, the family of winners.

The men who accomplish things worth while may have many weaknesses and deficiencies, many objectionable characteristics, but they have also characteristic good qualities, which are always present. Achievers are not only persistent, they are also hard workers and believers in themselves.

Many of us over-estimate the value of capital and influence, the pull that comes from others, and we greatly underestimate our own inherent strength. Young people do not half realize what a tremendous power lies in plain grit, in just sticking and hanging until victory comes.

In one of our great cities some time ago I saw this sign over a bank which had failed several times and started again, "Everything has happened to this bank which could happen."

Grit is what is left in a man after everything has happened to him that can happen to a human being and still leave him alive. You can measure a man's grit by what he does after he fails; after everybody about him has given up, and turned back. Grit will stick and hang; it will persist when every other mental quality has left the field.

Keeping on, keeping on, strengthens the will and keeps up the courage. When we quit because things go hard, our courage disappears and our will weakens. No matter whether you can see light ahead or not, no matter how dark the outlook, just stick and hang. This will keep your courage and your self-confidence intact, and the way eventually will clear up. There is a tremendous creative force in just standing up and holding on with your face towards your goal, even if at times you cannot move forward a single inch, or at the best only one step at a time.

A prominent Chicago man was once in the bottom of a mine when the hoisting apparatus broke. He found himself six hundred feet underground with no way of escape except by a ladder. After climbing three hundred feet to a landing he could only see a little opening at the top, which did not appear larger than a penny, and it did not seem possible he could ever reach it. But he said to himself, "I only have to take one step at a time, and to keep on." And he kept on, taking the steps slowly, one by one, until finally he reached the surface.

The trouble with most of us is that we are discouraged by the long distance to the light—between us and the goal—and we get impatient because we cannot go by leaps and bounds.

I have talked with a good many men, "down-and-outers," who in going over their past experiences have almost invariably said: "How I wish I had kept on as I began!" But they thought they were not getting on fast enough, so they became discouraged and turned back. They quit their first enterprise and then took the wrong turning.

"Turn-backers," "quitters," never get anywhere or accomplish anything of note. They are constantly starting in at new things, and so their lives are scrappy, filled with half-finished tasks. They go a little way into many things, but turn back when they strike thorns. They never go far enough to get the flowers, the pleasant things in an occupation, which come from long training and that superb facility and ease which are the results of experience. They do the hardest work, the breaking in, and then give up without even tasting the harvest of the seed they sowed.

It is said that many a persistent pearl diver, after others have become discouraged and given up, has fetched up a valuable pearl that was waiting for just one more plunge. It is the persistent soul that wins the great life prizes in ever line of endeavor.

Take out of the patent offices the triumphs of persistency, of clear grit; take out the results of bulldog tenacity of purpose, and there will be comparatively few patents left. We should have no ocean cable, no telegraph, no telephone, no wireless telegraphy, no sewing machine, no automobile, no flying machine, no air brakes, no great ocean liners. In fact, we would have a very primitive civilization with few comforts or luxuries. But for perseverance and grit we would still be traveling in stage

coaches or voyaging in sailing ships. Perseverance and grit are responsible for about all the things that make life worth living.

Not long ago I asked a man if he were college bred. "No," he said, "that is a very sore spot with me. I quit during the first part of my freshman year, because I became discouraged and homesick. I have blamed myself for this ever since. If I had only kept on I should have been some success to-day."

Lack or sand in his youth cost this man his career, blighted his chance at the outset and spoiled his future.

There are multitudes of men in this country to-day who have been mortified, and tremendously handicapped in their careers because, like this man, when youths they quit school or college under the stress of discouragement or homesickness. If they had waited just a little longer until they became a little acquainted with their companions and their environment, a little more interested in their studies, nothing could have induced them to quit.

How many youths have left medical and law schools, have given up learning a trade, when they were depressed by the strenuousness and apparent coldness of their new situation, when the way ahead looked very difficult and forbidding to them? Many a boy with a genius for the thing he attempted has given it up under discouraging conditions and regretted it ever after.

It is a dangerous thing to quit under temporary discouragement. No one is in a condition to know what is best and right to do when he is discouraged. Then the mind is warped, the judgment is twisted, one does not see the situation clearly; his perspective is at fault.

There are multitudes of failures in the world to-day who might have been great successes if they had simply had the nerve, the stamina, and the grit to hold on.

Keeping at it, as a life rule, has performed more miracles in the world's history than brilliant talents or genius. Keeping at it has made multitudes of well-educated men out of ignorant ones. Keeping at it has made most of the great fortunes in existence. Keeping at it has ever accomplished the impossible.

When Columbus' mutinous sailors refused to go any farther and threatened to put Columbus in chains, he never flinched or wavered, but kept pressing on. Calling the mutinous crew he reasoned with them, and tried to re-charge them with courage, hope, and enthusiasm. "But Admiral," asked one, "what shall we do when our hope is gone?" "Sail on, sail on, sail on, and on," was the dauntless reply of one of the most persistent, courageous souls that ever sailed the seas.

A person with comparatively little ability can begin things, can even carry them along while everything goes easily; but the test of character is the power to hold on, to sail on, and to keep sailing on, when everybody else has turned back, aye, when hope itself is well nigh gone.

Can you hold on when you have reached the point which would mean failure to most men? If you can, like Columbus, you are bound to reach your goal. We cannot tell much about what is in a man until he has reached the point where the majority of people would stop. Then, if he persists, hangs on and refuses to give up, we know he has the triumphant quality.

A pretty good classification of men could be made by grading them by the distance from their goal at which they give up or lie down. Some fall out of the race almost at the start, others keep on a little further, and multitudes stop just this side of victory—many of them almost in sight of their goal. They have not that extra bit of faith to keep on sailing, that additional needed mite of persistence to push on still a little further.

It is a rare man who, like Grant and Napoleon, has no surrender in his blood, who never recognizes defeat, who sees hope where others see despair, victory where others see disaster.

One of the earliest signs that a youth is made of the stuff that wins is his propensity to stick, to hang on. He persists. This is a sort of forerunner of talent, a predictor of success. No matter how many other good qualities you may have, if you cannot stick to your purpose you will not win out.

I am never very anxious about a youth's future when I find that he has sticking talent, that he can persist. Pure grit is that element of character which enables a man to clutch his aim with an iron grip, and keep the needle of his purpose pointing to the polar star of his hope. Through sunshine and storm, through hurricane and tempest, through sleet and rain, with a leaky ship, with a mutinous crew, it persists; in fact, nothing but death can stop it or subdue it, and it dies still struggling.

How long and how hard can you stick to one thing? Your success in life will depend largely on this. I have in mind a versatile man who manifests remarkable sticking qualities for anything that is new, but the moment the thing becomes a little old and familiar it stales for him; he loses his adhesiveness and falls off.

Remember every time you harbor doubt of your ability to do what you undertake, every time you turn yourself over to fear of failure, you are weakening by just so much your stamina, your grit, your initiative, your ability to stick and hang.

Cling to your vision, no matter what others may say or do. Keep your eye fixed on your goal. Don't swerve to the right nor to the left, though a paradise tempts you. No matter what bids you turn aside, or tempts you to change your course, keep on the straight path to your destination. The soft character, the easy-going man, who is afraid of criticism, denunciation, and who is always wondering what people think of him, is not made of the stuff that wins. He has not made the sand which keeps him going straight on to his goal.

What would become of a sea captain who, whenever he saw a fog settling down on the waters, or a storm coming up, would turn his ship around and sail back to the port he had left? You know he would lose his job and be branded as an incompetent and a coward. Every sea captain keeps his ship true to the compass, and he plows through fogs, storms or hurricanes to his distant goal. You are the captain of your life ship, and it is up to you to bring it into port grandly. If you haven't the qualities of a good sea captain your ship is in danger.

Downright hard work, a purpose which never flags, a grit and nerve which never retreats; these are the qualities that make life victorious.

It was years of persistent labor, involving the reading of a thousand volumes that enabled George Eliot to write "Daniel Deronda," for which she got $50,000. Schiller "could never get done," and Balzac, the great French novelist, sometimes worked a week on a single page.

"I do not remember a book in all the departments of learning," said Beecher, "nor a scrap of literature, nor a work in all the schools of art from which its author derived a permanent renown that is not known to have been long and patiently elaborated."

Don't get discouraged, don't give up and lie down; you may be almost within sight of your goal. Your pearl may be waiting but one more plunge.

When Grant was at Shiloh he thought he was going to fail, but he kept right on. It was just this keeping right on which made him one of the greatest military figures of his age. After his defeat at Shiloh nearly every newspaper in the United States demanded his removal. Lincoln's friends pleaded with him to give the command to someone else; but to all appeals Lincoln replied: "I can't spare this man. He fights. He's got the grip of a bulldog, and when he once gets his teeth in, nothing can shake him off." His was the kind of grit that makes a way if it can not find one.

The world makes way for dogged persistence, because there is nothing else to do. Think of trying to influence a Bismarck in the prime of his power to release his grip upon the thing he was determined to put through! Think of trying to discourage Napoleon from taking

(Continued on page 46.)

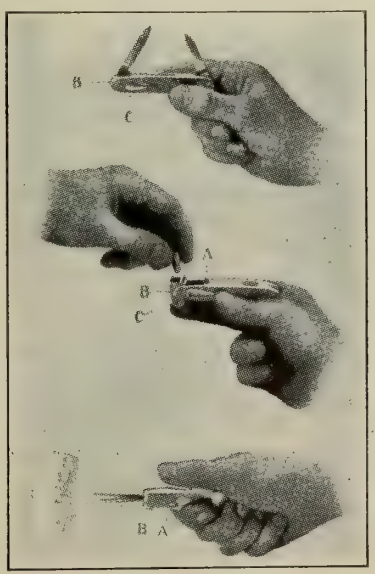
NEW HARDWARE GOODS
OFFERED TO CANADIAN HARDWAREMEN

NATIONAL AUTO HEATER

The National Electric Auto Heater is being marketed by the National Electric Heating Co., Toronto. The heater, it is claimed, will keep the radiator from freezing. It will also keep the engine warm while the car is in the garage. All that is necessary is to put the heater

National Auto Heater.

under the hood and connect the plug to the lamp socket. The heater measures 9½ x 3¼ x 1¼ inches, and consumes 200 watts. It is finished in black, and is supplied with 8 feet of cord complete. The heater retails at $3.50.



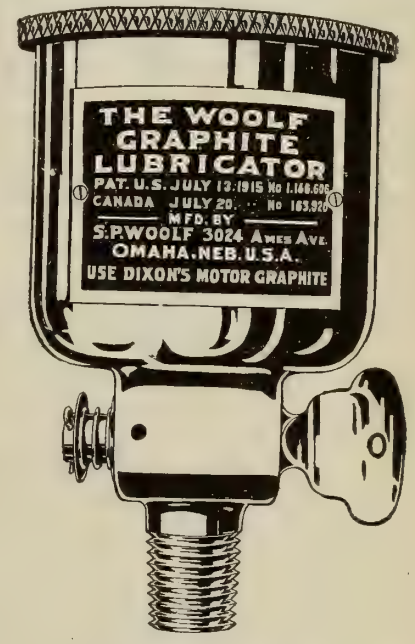
FLEXO SPRING WHIP

Hamilton Whip Co., Hamilton, Ont., have produced a new whip called the Flexo Spring Whip, which is to be sold to consumers at 50c. The makers claim that this is not merely a whip with a label changed, but is an absolutely new idea in whips, and its attractive red and yellow label will merely emphasize a new manufacturing formula. The whip, it is said, is built up on a rattan foundation. In the past it has been found that when the bark is stripped from rattan the wood rapidly dries out and becomes brittle. To overcome this difficulty the Flexo Spring Whip has been introduced and by retaining the sap in the wood with a rubberized coating, the flexibility of the rattan remains and it may be subject to any regular use without breaking.

Over the rubberized coating there is an English cushion outer cover which protects the whip from the weather and also from wear, especially when the whip is hit against the shafts. A hand-made Philadelphia snap is attached to the end of the whip, and completes what the manufacturers claim to be an exceptional value in a 50-cent whip.

DEFENDER POCKET KNIFE

The Defender pocket knife is offered to the trade by the United States Small Arms Co, 1790 Broadway, N.Y. The knife is made with an attachment which enables it to discharge a .22 calibre short cartridge, blank or ball. The makers claim it is the only article of its kind ever constructed, is well made, best quality of steel used in the blades. The makers also taste it is as effective as any regular pistol or revolver using a .22 calibre cartridge, at the same time



Defender Pocket Knife.

being a first-class pocket knife for ladies or gentlemen. If parts become dry by frequent use place a drop of oil in throat of trigger. Tighten up the screws occasionally. Put up in chamois or leather cases with button fastener.

THE WOOLF LUBRICATOR

The Woolf Graphite Lubricator Co., Omaha, Neb., offers to the trade the Woolf Lubricator, here illustrated. The makers state that the Lubricator is very simple in its operation. The barrel at the bottom of the retainer is hollow, with a hole in one side; turn the barrel over and the graphite empties into the

The Woolf Lubricator.

fuel mixture, and is drawn by the suction of the engine up into the combustion chamber.

Tap the intake manifold anywhere above the carburetor and below the "Y." We advise taking off the manifold, or loosen up the carburetor, slip a cloth between; this will keep any drill cuttings from doing any harm. If you want to place the Lubricator at any other place, use ¼-inch or ⅜-inch tubing. The suction from the engine will pull the graphite from any position. Graphite, it is said, is not affected by heat, and with the oil film in the cylinders effectually prevents friction, increases compression and cylinders never need to be reground.

By actual tests, the makers state, it has been found that one charge of graphite every 50 miles gives the best results for a four-cylinder engine, and two charges for a six or eight.

The Lubricator is nickel-plated, and can be placed on the dashboard near the driver.

WEEKLY PAINT DEPARTMENT

Two Methods of Making Glass

How Glass is Made—Sizes Obtainable in Certain Grades—What is Meant by Terms Used by Trade.

THE bulk of the glass being used in Canada to-day is imported from the United States. Any information that comes from a reliable U. S. source is of interest to Canadian hardware and paint dealers.

An interesting and authoritative article on the subject has been prepared by Clarence Warner Condie for the National Glass Distributors' Association. The article appeared in the *American Paint and Oil Dealer*, and is reproduced as follows:—

The quality of window glass or sheet glass, also termed "blown" or "cylinder glass," has been improved by the modern methods of production, and much has been expended in the effort to make perfect blown cylinder glass, but there are still some waves.

The glass is blown in cylinder form and flattened by reheating, which gives it a slight bend or bow, a possible variation in thickness in the larger sizes, and surface flaws.

The selection of the various grades is a matter of expert judgment. The large sheets produced, in single or double thickness and heavier, are cut to stock sizes according to the merits of the glass and graded in "AA," "A," or "B" quality, the defects being eliminated to the greatest possible extent.

The ingredients, as we have said, are practically the same in window glass as in plate—it is wholly a matter of refinement and process which produces the different kinds of material.

Window glass—is made by two methods—by "machine" or by "hand." The difference is in the blowing process — both producing the cylinder from which all window glass is evolved. The same general treatment of the cylinder, to produce flat sheet glass follows in both machine or human blown material, and both produce equally standard quality.

Sources of Manufacture

To make the cylinder the molten glass or "metal" is brought to proper consistency by extreme heat, and the glass in the human blown process is "gathered" upon the end of a tube (or blow pipe) from the furnace and blown into a huge cylinder by repeated heatings and blowings, until the material is all evenly distributed. From a globular mass about the size of a man's head, the blower swings the pipe into an alley or opening in the door, blowing as he swings until the full sized cylinder is formed. This requires skill of the highest degree—the blower by regulating the amount of material entering the cylinder, makes a single strength or double strength heavier glass as desired.

The blowing machine accomplishes the same result by purely mechanical process—the intricate working of the mechanism, the supply of the molten glass, the air pressure, rapidity of action, making single or double thickness, being controlled by a single operator, who appears to have supernatural powers, surely never dreamed of throughout the great stretch of years when the glass-blower was master of the art and accredited with inimitable skill.

The cylinder is decapitated at both ends by an ingenious method of spinning a string of hot glass at the proper place, or by the use of a wire wrapped around the glass and electrically heated, which causes the cap and crown to break off clean. The cylinder is then split lengthwise—placed in the flattening oven on a large circular stone, and as the heat is increased and as the glass begins to wilt it is quickly smoothed out to the shape of the flat stone, upon which it rests.

Cylinder glass cannot be perfectly flattened, and the waviness and bow or slight curve will always occur in this product.

In glazing—the bend or bow should be glazed outward in the sash — the bulge towards the exterior.

Window Glass Sizes

Window glass in double strength, or heavier, is made as large as 30 in. x 90 in. or 38 in. x 86 in., or 48 in. x 80 in., and such extreme sizes containing twenty-five square feet, but it is inadvisable to use such glass in these measurements on account of the liability of breakage and the distorted vision due to waves, etc.

The same may be said of the extreme sizes of single strength, which can be made up to 24 in. x 60 in., or 30 in. x 54 in., or 36 in. x 50 in., in sizes containing ten to twelve and one-half square feet.

Crystal Sheet Glass

A heavy blown glass, made by the same process as ordinary window glass and subject to the same inherent defects. Graded in "AA," "A," or "B" quality and made in various thicknesses: 26-ounce, 29-ounce, 34-ounce, and 39-ounce (3-16 in. thick).

In examining samples of small size for inspection of quality, it should be remembered that the large light of glass will show the natural waves and defects, while the small piece may appear nearly perfect.

It is not altogether a matter of expert judgment to determine the various grades and certain rules may be accepted governing window glass specifications.

Thickness and Weight

Single strength measures approximately twelve lights to the inch, but a small variation either way is permissible. Single strength weighs approximately 16 ounces to the square foot. Double strength measures approximately nine lights to the inch. The thickness should be fairly uniform and the weight approximately twenty-four ounces to the square foot.

Window glass is packed in regular sizes approximately 50 square feet to the box up to the 100 united inch bracket (adding width and length), and 100 square feet to the box in sizes of over 100 united inches.

Single strength in factory packages weighs from 65 to 75 pounds to the box (shipping weight). Double strength in factory packages weighs from 85 to 110 pounds to the box, 50 feet boxes (shipping weight).

The Various Qualities

"AA" quality should be clear glass, free from any perceptible amount of air bubbles or blisters, burnt specks or burns, cords and strings. It should have a good gloss and an even surface and be well flattened. By air bubbles it is understood that tiny blisters, or imperfections not perceptible on the cutter's table, but detectable when placing the sheet directly towards the light, would not be objectionable. This should be a

MARTIN-SENOUR
PAINTS AND VARNISHES

MADE IN CANADA *SOLD ON MERIT*

MARTIN-SENOUR Paints and Varnishes are the easiest and most profitable to sell because they are well-known for their unsurpassed quality, because our message of quality and service reaches and is read by nearly every possible user in Canada, through the mediums of largely circulated daily and weekly press, magazines, farm and religious journals, etc.—because our sales help and co-operation consists of most effective features of interior and exterior displays, mailing campaigns, follow-up systems, and direct help of salesmen.

Naturally, if more people are attracted to your store to procure Martin-Senour products, increased sales in all your other lines may be also expected.

Satisfied customers are your best sales promoters.

PIONEERS
of
PURE

WINNIPEG TORONTO HALIFAX

If interested, tear out this page and keep with letters to be answered.

careful selection in both single and double and should represent the very best that can be produced in window glass by the present methods.

"A" glass is the normal selection of glass when no special selection is desired or specified and it admits of such defects as small strings or lines, small blisters when not too close to one another or located in the centre of the sheet. Well flattened, the surface even, and devoid of noticeable scratches, cropper marks, burns and other prominent defects.

"B" glass covers a wider range than either "AA" quality or "A" quality. It permits many of the defects inherent to the process of making such as waves, strings, lines, blisters, scratches, burns and other similar or equivalent defects. This quality embraces everything below "A" quality, not stony or full of blisters or other large defects objectionable for any common purpose, such as heavy scratches, heavy blisters, cords and sulphur stains.

KEEPING IT AS A MIRACLE WORKER

(Continued from page 42.)

his army across the Alps in winter! He never planned a great campaign which his advisers did not try to have him give up as impossible, but the impossibilities to an ordinary man were not impossibilities to Napolean. He laughed at such obstructions. How many of Washington's friends begged him to save himself at Valley Forge and to give up campaigns which threatened his life. They told him that his life was worth too much to sacrifice, even in such a cause.

Young people continually prate of genius. They seem to think that every person who does a great thing in the world must be a genius, a man with superb talent, but, as a matter of fact, the greater number of men who have made history were men of ordinary talents, but with very extraordinary application, great industry, men with common ability, but with mighty uncommon persistence, determination and clear grit.

WEEKLY PAINT MARKETS

(Continued from page 49.)

a good run during the week, with higher prices prevailing in some quarters and the range running from $41 to $45. In the face of the shortage of mill feeds of all kinds and the need for the farmers to feed their milk cows in order to get the needed supply, there has been a good demand locally and for export. The range of prices are as follows:

1 to 3 barrels, raw $1.01½ to $1.07½; boiled $1.04 to $1.10; 3 to 5 barrels, raw, $1.00½ to $1.06½, boiled $1.03 to $1.09; 6 to 9 barrels, raw, 99½c to $1.05½, boiled $1.02 to $1.08.

Turpentine Shows Signs of Weakening

For the most part the market held steady during the week, with a decline of 1½c recorded in the prices of one concern. The reason for this decline was stated to be a weakening in the primary market. With the concern quoting a decline the price now in 1-barrel lots is 65½c per gallon, with 2 to 4 barrel lots 1½c under the single barrel price. Five-gallon lots are quoted at 5c per gallon over the barrel lots. The range in prices that now maintain are as follows:

	Per Imp. Gal.
1 barrel lots	65½c 71c
2 to 4 barrels	64c 70c
5 gallon	70½c 75c

Glass Will Probably Go Higher in Future

There is a firmness in the local glass market which to some dealers at least seems to indicate a still higher price. The advance was expected about the middle of this month, but it is pointed out that some dealers have fairly heavy stocks and this has operated to keep prices steady. The demand has improved. Although it is not up to normal there is quite a considerable improvement over the summer and spring trade.

White Lead in Oil Very Firm in Price

In the face of the advancing price of linseed oil and the firmness of the pig lead market there is a firmness in white lead and oil. Pig lead is now quoted from $7 to $7.10 per 100 pounds. At the time of the recent decline in white lead in oil pig lead was selling around $6 per 100. There has been an advance of 50c since the decline and white lead in ton lots is selling at $13.95 and in small lots at $14.25.

Firmness in Putty

There is a firmness in putty due to the advance in linseed oil and the scarcity of whiting. Some wholesale dealers are anticipating an advance in the near future.

PRACTICAL SHEET METAL WORK

(Continued from page 40.)

phaltum on these hoppers as an extra precaution. Where possible the use of copper is very much preferable and when copper is used care should be taken not to beat, or turn over the seams too sharp. Soldering all joints is far better than too tight a locked seam.

It will be noted in Fig. A that a cast iron T. Y. and cleanont is shown, this is merely fitted to the hopper so as to give the reader an idea how a hopper may be installed when there is a horizontal rim of piping, in which case the pipe should always be cast iron.

(Continued in Next Issue.)

TAKING THINGS FOR GRANTED

The man who is in the habit of taking things for granted—who doesn't know and doesn't care if he knows or not—never will make a success of any undertaking.

The story goes that the real blame for the loss of the Battle of Waterloo in which Napoleon the Great was vanquished, must be laid at the feet of the French General Grouchy, who "took it for granted" that the German troops under Bluecher would not be able to join the army led by the Duke of Wellington. They did, however, and Napoleon was sent to Saint Helena as a "prisoner of Europe," to end his days on that barren island.

The retail hardware dealer "takes it for granted" that the customer who "demands" credit will pay his bill in a "reasonable" time, so doesn't set any specific date for payment—with the result that in many cases the bill is never paid.

He "takes it for granted" that he can sell a gross of a certain article in a "reasonable" time, and so when the "quantity" salesman offers an extra five per cent. if he takes a gross instead of a dozen, he orders a gross—with the result that the extra discount is eaten up in rust and shopworn appearance long before the gross is finally closed out.

He "takes it for granted" that when a competitor offers an article at an exceptionally low price to the consumer that competitor must of necessity have bought the article at a figure low enough to make it possible for him to make a profit at that low selling price—with the result that he wastes his time, money and energy in trying to obtain the same "buying facilities."

He "takes it for granted" that if one of the other hardware stores operates a sheet metal shop and if the prices in the competitor's shop are lower than his for certain classes of work, he must also be able to do that work in his shop at similarly low prices—with the result that his shop, instead of being a profit producer, as it ought to be, is an actual source of loss.

There is nothing which will cure a person of "taking things for granted" as quickly and effectively as a course in business accounting—not merely bookkeeping, but the relation of acounts to one another, and especially those of cost, overhead, gross and net profits.

The Carter White Lead Co. of Canada, Limited

91 Delorimier Avenue
Montreal

Varnish selling is easy when the buyer sees Berry Brothers' label. It is one of the strongest selling arguments All products sold under it are true to description and can always be depended upon to run uniform.

The long record behind Berry Brothers' varnishes and enamels has earned and won the confidence of all buyers.

By pushing Berry Brothers' line you can build up a bigger varnish business.

LUXEBERRY WHITE ENAMEL—whitest white stays white. Makes a permanent snow-white finish in either dull or gloss effects.

LIQUID GRANITE—floor varnish. Makes a smooth, satiny finish. Lasting, waterproof, marproof, also adapted for bathrooms, window sills and casings, and all interior work where great durability is desired.

LUXEBERRY WOOD FINISH—for general interior work. Develops and preserves the grain of all woods, and makes a handsome and lasting finish. Rubs perfectly.

LUXEBERRY SPAR—for exterior work. Especially adapted for durability under extreme exposure—front doors, store fronts, marine work, etc. Makes a handsome finish and will not turn white under the severest conditions of wear.

We make a specially adapted varnish or enamel for every known use.

Write for price list and interesting dealers' proposition.

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, Oct. 11.—Linseed oil is still the exciting factor of a market which is otherwise considered quiet and unsensational. Certainly linseed oil is doing lively things these days. The seed alone has leapt in less than three weeks no less than 40 cents a bushel. It is now quoted around $2.24 per bushel. To add to the generally sensational character of this particular market, the new and so much nearer submarine "frightfulness" has figured vexingly upon the scene, raising insurance rates on prospective cargoes from the Argentine, and threatening to upset all calculations.

Argentine Reports Bad

Even the optimists of the market were inclined to fear the worst from the Argentine this week. Reports read from the telegrams by those in touch with conditions, declared that the Argentine crop looks like fifty per cent. of what it ought to be, and that there is no rain anywhere. Consequently, linseed oil remained in the highest realms of price, and at the time of writing was still endeavoring to break records for altitude.

Prices Quoted Are Firm

Following prices are quoted to the retail trade by one large firm, though some firms are chary of quoting at all under present conditions, and the price in the carload is 96 cents at least, and likely to be more.

Linseed Oil	Raw	Boiled
1 to 4 bbls.	98c	$1.00
5 to 9 bbls.	96	.98

Above prices are for one delivery in Montreal, and were not quoted as stable under present conditions.

Huge American Demand

Not only the spot seed available, but also futures are being snatched by American buyers and at very firm prices indeed. In fact, according to one crusher's report, the Americans are ready to bid instantly a higher price by a cent or more at a time per bushel to secure a supply of the presently available seed or coming Canadian crop. The Canadian crop is estimated at about four to five million bushels. American consumption last year was between twenty-two and twenty-three million bushels, and the Americans last year grew only about 14,000,000 bushels. The whole Canadian crop would be only a drop in the bucket to that demand, and the effect of an increased United States demand on the market may thus be estimated. Disappointed in their expectations from the Argentine, the American market turns instantly to the Dominion as the nearest source of supply, but with an idea gaining force that not only America's, but the world's supply of linseed is going to be short this year, the buyer will probably have to pay very firm prices indeed.

Turpentine Firm and Unchanged

No change is reported as regards turpentine, which is quoted at from 66 to 70 cents in barrels, according to orders. The supply available seems to be plentiful, and there is not any suspicion of shortage at present noticeable on the markets.

Mixed Paint Outlook

While prices in mixed paints, and also in the dry colors, remain as yet undisturbed by the prevailing conditions in other directions affecting paint, there is a feeling of doubt existent as to the chances of these prices remaining unaltered between now and spring. Spring business is hardly begun, though there are enquiries, and present prices seem to find favor with demand. Predictions are heard variously, and without any definite assurance, to the effect that colors in oil may be more costly, and that mixed paints are almost certain to go up. Certainly, indications are that way, but prices have already risen and terms have been shortened. The next increase may not be soon.

Glass and Putty Required

A brisk seasonable demand for glass and putty has been noticed during the past week, and the hint given lately from the American side that glass is to cost more has smartened up buying as well as the actual arrival of colder weather. Putty is very firm again, due to the condition of the linseed oil market, and glass repair jobs are not as low priced as they once were. Labor is higher priced, or lacking, and this adds to the cost of both the material and the job.

Brushes May be Dearer

Word has been passed around in the hadrware trade that an increase in the prices of brushes of all kinds from domestic to paint brushes may be looked for, and the causes—bristle supply difficult, metal mountings dearer, etc., are in themselves hints already known to the trade.

TORONTO

TORONTO, Oct. 12.—Dealers report a fair trade during the past week. The weather has been favorable for painting and there has been a noticeable increase in the volume of mixed paints changing hands. Wholesale jobbing houses assert the trade has been gratifying up to the present, with prospect of still larger business if the good weather continues. Linseed oil for the most part holds at last week's quotations, although one dealer advanced the price 2½c. There is a wide range in linseed oil prices at the present time. There is uncertainty in the market and dealers are looking for still higher oil in the face of advancing market in flaxseed. Turpentine showed an easier tone during the week, with declines registered by some of the dealers. There is also quite a range in turpentine prices at the present time. The market is uncertain in this commodity also. Glass is firm in primary with strong probability of an advance in the near future. Putty also is firm in the face of the advancing prices on linseed oil. Whiting continues scarce with a firmness in the market.

Linseed Oil Firm With Advances Recorded

Linseed oil continues in an uncertain state, with the market strong and a tendency to advance in certain quarters. There is quite a wide range in prices, however. Some of the dealers have been quoting prices as low as 95c up to Wednesday but on that day these prices were withdrawn in the face of the advancing seed market, pending advices from the head office of the concern. Prices were quoted as high as $1.07½ for raw oil in 1 to 2 barrel lots during the week. Quotations for the same class and in the same quantity ranged for the most part from $1.01½ to $1.05, with the latter price more generally prevailing. The demand has only been fair in the face of the higher prices. Flaxseed continues to advance steadily. On Wednesday it closed at $2.28, an advance over the previous day of ½c per bushel. Tuesday's quotations for seed on the other hand were 4c higher than the previous close. Conditions in the Argentine still continue to act as the bullish factor. Linseed oil cake has had

(Continued on page 46.)

Who Sells the Most Paint?

THE merchant who relies entirely upon his own salesmanship—who tries to persuade customers to use little-known brands—who must pay for his own advertising, write his own window-cards, and figure out his own window-displays?

or—

Is it the other merchant, whose own salesmanship is assisted in a score of ways by the salesmanship of a great paint manufacturing organization—who handles a line that everybody knows about, a line whose quality is never questioned and that is always easy to sell; the merchant whose paint advertising is written for him by experts, and paid for by his manufacturers, who is always supplied with the very latest advertising literature, handsome window-trims, and all the other accessories needed to help him to get his town's best paint business—the merchant, in a word, who is an authorized agent for

B-H
Paints and Varnishes

The sales records of Brandram-Henderson agents in all parts of Canada prove conclusively that a live merchant, handling these high-grade products, and assisted by this aggressive organization can sell *more paint* than he could in any other way.

BRANDRAM-HENDERSON LIMITED

Offset the Enormous Advance in Wall Papers

The materials that enter into the manufacture of wall paper have advanced to such an extent that all grades of the finished product have advanced 100 per cent. to 200 per cent. over the prices two years ago. Foresighted dealers are "cashing in" on this condition and so can you.

Recommend

Flat-Tone

Wall Finish

for it is better, more satisfactory and much less expensive than the best wall paper—besides it can be washed. The effects that can be obtained with the different tints and stencil combinations are quite as pleasing as any wall covering. Flat-tone is less liable to damage. Get out your sample cards and make the most of your possibilities from now on—and don't forget the other S. W. products.

Re Gauges of Sheets.

On account of it being practically impossible to secure galvanized sheets from England, owing to the war, American mills have decided that they will no longer roll the English gauges to meet this competition. However, they will continue to roll at 10¾ oz., which will be known as such or a 30 gauge, and will take the place of the former English 28 gauge.

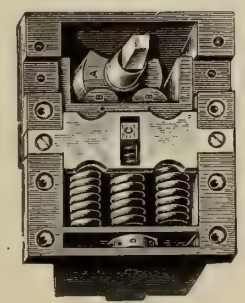
Glove Time is Here

And our Tapatco Brand Cotton Gloves are just the right answer to many needs. It is not alone their price that makes them good sellers; they sell well because they are just the right thing for doing the odd jobs when a Glove is needed.



TAPATCO REGISTERED BRAND TRADE MARK **COTTON GLOVES**

They are made in Band Top, Knit Wrist and Gauntlet Styles, light, medium and heavy weights. Leather Tips and Leather Face. Jersey Gloves and Mitts in Oxford, Tan and Slate.

Have a supply. Sales are easy, and every sale is profitable. They merely require to be suggested and shown to sell.

Your Jobber supplies them.

HOUSE COLORS

There is no getting away from it — the Moore value is remarkably popular.

These pure linseed oil paints are "First rank" in quality and they sell at a moderate price.

In ordinary times these paints sold well, but in these days of high prices our sales are beating all records.

Secure the agency for this big-profit line.

Write for full particulars.

KINDLY MENTION THIS PAPER WHEN ANSWERING ADVERTISEMENTS

If interested, tear out this page and keep with letters to be answered.

Condensed or "Want" Advertisements

There is always someone, somewhere, who is looking for just such a proposition as you have to offer—and it is more than likely that he is a hardwareman and a subscriber to HARDWARE AND METAL. Let an advertisement on this page bring you together.

RATES (payable in advance): 2 cents per word first insertion, 1c per word subsequent insertion. An additional charge of 5 cents for each insertion is made when Box Number is required. Each figure counts as one word.

POSITIONS WANTED

EXPERIENCED HARDWAREMAN, BOOKkeeper, typist, general office man, desires position. Married. Apply Box 541, Hardware and Metal.

SPECIALTY SALESMAN DESIRES POSITION as sales manager or traveler. Twelve years' experience calling upon Ontario hardware trade. Box 313, Hardware and Metal.

SITUATIONS WANTED

THE "CHANGING TIME" IS GETTING near. There are many firms who have vacancies on their sales or office staffs to fill during the next few months. If you want to qualify for some of these vacancies, tell your story briefly in a Condensed Advertisement, and try in out in Hardware and Metal. A twenty-five word advertisement may land you a permanent position with splendid prospects.

AGENCIES WANTED

FOR BRITISH COLUMBIA — MANUFACturers' agent, with highest references and four years' connection with best hardware trade, desires agency for one or two additional high-grade and quick-selling lines. Commission basis. Best of opportunity for firms desiring continuous representation from now on at minimum cost. Ideal time for getting established. Only permanent agencies considered. Box 544, Hardware and Metal.

THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms, is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal, under this heading.

STORE EQUIPMENT FOR SALE

YOU MUST HAVE A LOT OF OLD FIXtures around the store which are no longer of any value to you, but would prove very useful to someone else in the hardware business. Find a purchaser for this equipment through an advertisement on Hardware and Metal's Condensed Ad. Page.

FIFTY DOLLARS TIED UP IN OLD FIXtures that you are no longer using, would make a lot of money for you if invested in stock and turned over three or four times a year. Get your money out, by selling the fixtures to one of Hardware and Metal's readers who may be looking for exactly what you have to offer.

HARDWARE WINDOW DRESSING—THIS is the first book ever written devoted exclusively to Hardware Display. There are 256 pages and over 200 illustrations with full working descriptions. It is the purpose of this book to illustrate and explain how hardware windows may be dressed to the best advantage—how they can be made to sell goods. It is not a theoretical work but a collection of specimens of the best work and ideas of the most expert window dressers in the world. These men have contributed their experience covering the many phases of hardware window display. This volume, therefore, represents the sum total of information on this subject presented as concisely as is consistent with clearness. By following the simple illustrated directions given in "Hardware Window Dressing" any clever clerk can put in good hardware displays at no cost whatever. Size 8 x 11 inches. Price $2.60 postpaid. MacLean Pub. Co., 143 University Ave., Toronto.

SITUATIONS VACANT

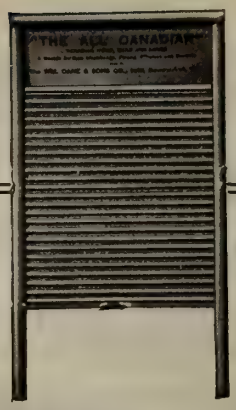
WANTED—A YOUNG MAN WITH EXPERIence in the hardware business, to act as clerk; also assistant shipper for the shipping room, with some knowledge of checking and packing goods. Please state age, experience and salary expected. Apply to Sumner Co., Moncton, N.B. (43)

BUSINESS CHANCES

IF YOUR HARDWARE BUSINESS IS FOR sale, who is more likely to buy it than a hardware man, be he merchant, clerk, or traveller? It is only hardware men who read Hardware and Metal, and a condensed advertisement in this paper offering your business for sale, will put you in touch only with the people who will be most interested.

MISCELLANEOUS

WANTED — HARDWARE OR GENERAL store in B.C. or Alberta, or an opening for same in a growing district. Box 542, Hardware and Metal.



WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada. (tf)

ADDING TYPEWRITERS WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited. Room 314, Stair Building, Toronto.

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fenson Elevator Co., Toronto.

HARDWARE STORE BUSINESS METHODS —The authors of the articles in this book are for the most part practical and progressive hardware merchants. The embodiment in these articles of the experience of such able and enterprising men and the suggestiveness of the principles and maxims presented make this volume of infinite value to that trade. The 40 subjects discussed include: Rules and Regulations for the Hardware Store; Hardware Buyer; Good Methods in Stock Taking; Prices and Catalogues; Collecting Accounts; The Merchant and His Employees; Changing Business Conditions and How to Meet Them; Profit Figuring System; Starting in Business; Changing a Credit into a Cash Business, etc. 220 pages. Price $1.10, postage paid. MacLean Pub. Co., 143 University Ave., Toronto.

COSTS LESS

than aluminum and zinc wash boards, is just as good and is more serviceable.

The All-Canadian
All-Wooden
Wash Boards

are the result of great scarcity and high price of zinc and aluminum—a price that has greatly handicapped washboard sales.

All-Canadian grown wood, Canadian-made nails, and by Canadian workmen—that's why it's all-Canadian.

The finest grained hardwood is used for rubbing surface.

Retails at 20c and leaves a BETTER profit.

Standard zinc, glass and enamel wash boards always on hand for prompt delivery, until notice to the contrary.

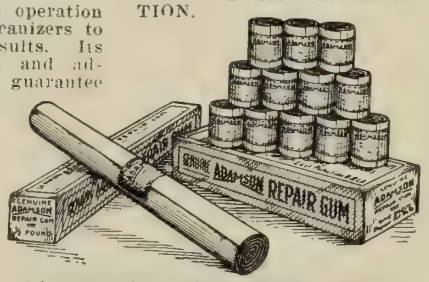
ADAMSON Vulcanizers

MODEL "S" FOR PRIVATE GARAGES AND REPAIR SHOPS. The money-maker for the repair man. **The Adamson operates different from all other vulcanizers** — no steam or electricity is required. It is absolutely automatic — does not require watching or regulating. NO DANGER OF BURNING OR RUINING THE TIRES, AS WITH OTHER VULCANIZERS. With our Model "S" a cut 12 inches in length is repaired in 15 to 20 minutes.



There are **over one million in use** — several times more than all other makes combined.

YOU'LL FIND THE DEMAND AND PROFIT BEYOND YOUR EXPECTATION.

ADAMSON Repair Gum

Is essential to the operation of Adamson Vulcanizers to obtain the best results. Its exclusive qualities, and advantages are a guarantee against failure.

No cement is necessary. "It makes repair work a pleasure."

Write for attractive dealers' proposition on complete line.

The only Vulcanizer made in Canada.

Economy This Winter

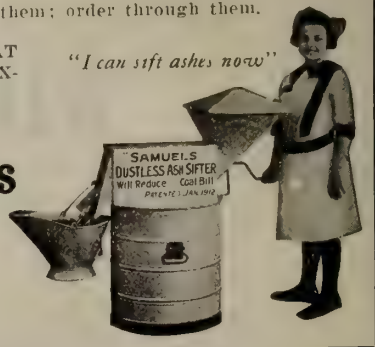
The Government is preaching it. Bankers are, Editors are. For war costs must be paid, and economy and thrift, personal and domestic, will pay our share of the appalling war debt that daily mounts higher.

Economy begins in the cellar—with a CANADA DUSTLESS ASH SIFTER. It will save pounds of coal a day, many pounds in a week, a ton or more in a winter. With coal at $8.00 or more per ton, we ought all to economize.

Put it up to your customer TO SAVE COAL and you'll have no trouble to sell the

CANADA Dustless Ash Sifter

(See illustration)



Ashes go in barrel—coal into scuttle. Positively dustless and lasts for many seasons.

Every family is a prospect, and every sale represents a nice profit—found money to you. Have a half-dozen or so always on hand.

Jobbers everywhere supply them; order through them.

SEE OUR EXHIBIT AT CANADIAN NATIONAL EXHIBITION, TORONTO.

Why you should sell this Range

It is extremely well known to the Canadian public. 50,000 of them have been sold. This is a huge number. It took us 20 years to sell this quantity. Any range on sale continuously for 20 years and bought by the public at the rate of 2,500 a year can be relied upon. The

"HOME COMFORT"
Steel Range

was sold by us until two years ago direct to the consumer. At first we had to meet "knocks" a-plenty. We had to meet the final authority—the housewife. She is hard to satisfy because she **knows.** We count it a great victory for the goodness of the "Home Comfort Range" that sold and kept on selling right in the same neighborhood year after year for 20 years.

Two years ago our policy was changed. We ceased to go to the customer direct, and began selling through the retail hardware trade. The advantage to any hardware dealer in acting as our agent is that he is selling a range **well known, well esteemed** and **well proven.**

Write us for full details to-day lest you forget to do so to-morrow.

Talking to the Point—

CLASSIFIED ADS. get right down to the point at issue. If you want something, say so in a few well-chosen words. Readers like that sort of straight-from-the-shoulder-talk, and that is the reason why condensed ads. are so productive of the best kind of results.

CLASSIFIED ADS. are always noticed. They are read by wide-awake, intelligent dealers, who are on the lookout for favorable opportunities to fill their requirements.

TRY A CONDENSED AD. IN THIS PAPER.

If interested, tear out this page and keep with letters to be answered.

"Well, gentlemen, I take off my hat to you,—

such a beautifully made rifle and such shooting I never expected to see. . . . Up to 800 yards I could hit anything I shot at . . . I killed a big bull, over 500 yards away, and did it so easy . . . The 'Ross' is good enough for me. . . . It has a nice balance, is light and has a nice feel to it. I will say to anyone who is looking for the best thing in rifles, get a Ross .280 and you will never be disappointed."

Jas. L. McLaughlin,
Hunter and Guide,
Valley, Wyoming.

Professional hunters and guides the world over agree with Mr. McLaughlin in his appreciation, and the ever-growing demand for the Ross .280 proves that they are right.

The Ross .280 using the Ross .280 Sporting Cartridge with its copper tube Expanding Bullet (patented) is one of the most accurate, powerful and reliable rifles on the market. Every dealer should have it on his shelves.

The Ross .303 Sporting Models also give excellent results and the trajectory is as low as that of almost any of the high power rifles sold. The popular prices of these models—$25.00 and up—make them general favourites.

The Government having selected the Ross .22 Cadet Rifle as the official arm for the Cadet organizations— there is an added incentive for dealers to stock this most popular small rifle.

On Active Service

We think we are right in asserting that there is not a factory or workshop in your town that is not using one or other of the Famous Five Files.

The reason is obvious.

This means that every day there is a certain demand for so many of these files. If you carry a good stock of them, business will naturally gravitate to your store.

More than 60,000,000 of the Famous Five Files are sold evry year. Our advertising, plus the quality of the files themselves, creates and maintains the demand.

It is up to you to get the retail sales benefit of this demand.

When ordering through your jobber, specify the Famous Five.

His Best Plymouth Ad

(an actual experience)

"I have been selling for 18 cents per pound, while some of my competitors claim they sell Manila rope for considerably less. A farmer from out nine miles south of here asked me what I charged for Hay Fork rope per pound. I told him 18 cents. He called me a highway robber.

"It just happened that there were at least twenty people in the store, so I told him to prove his case.

"We had it in writing that he bought 200 feet of Manila rope 13/16 in. at a lower price per pound, amounting in all to $8.65. I offered to sell him 200 feet at 18 cents a pound for a total of $7.20. Cutting the rope, weighing it and proving my case was the best advertisement on rope I ever had. They all had to admit my Plymouth Rope was the best grade, as it was not doped to make weight and would last longer."

The purity of Plymouth Rope, which helps to make it the most durable of all Manila ropes and the most economical, even at a higher price per pound, is one of **your** best ads if **you** sell Plymouth.

If you don't sell Plymouth, this same purity is one of the big reasons why you should.

Quality Service

Courtesy in Business

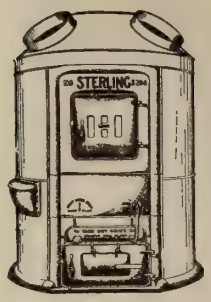
Fittingly framed and hanging in the Offices of one of the most important Public Service Corporations on this North American Continent is the following

'Did you say Please and Thank you?'

Broad minded men direct the destiny of that Corporation, men who know that public or private enterprises to be lastingly successful must operate for the public good.

Quality and Service are the two important factors in our business life today, but Courtesy is the door through which they must enter.

We are large producers of Hamilton Pig Iron and our output of Open Hearth Steel Blooms and Billets, Iron and Steel Bars of all shapes and size runs into enormous tonnage.



The products of our mills include practically everything that can be manufactured from Iron and Steel and these we distribute to thousands of satisfied customers.

Our business is an extensive one and a successful one. The World is our market: but our prosperity and success in the future, as in the past, depend upon the continued confidence, co-operation and good-will of the people we serve.

A complete assortment of Beveled Edge Shank and Socket Chisels, Pattern Makers' Chisels and Gouges, and Handled Turning Tools.
Write for catalog and full particulars.

Buck Brothers
Milbury, Mass., U.S.A.

VENTIPLEX
Sweat Pads

absorb the perspiration of the horse by bringing the moisture to the outside and allowing it to evaporate there—much as a blotter does ink. Ventiplex always holds its shape—can be washed when dirty, **and will cure gall sores of long standing,** the very composition of the pad tending to heal them.

VENTIPLEX SWEAT PADS, SADDLE BLANKETS, HOUSINGS AND TOP NECK PADS

are easily handled, easily sold, and afford you a good margin of profit. Satisfaction is our guarantee.

"COMFY" WEATHER STRIP

Put up in Cartons of one pound each or 38 feet per carton. It sells **now** and will sell on into December. Good profit for you. An ideal article. Put up conveniently. A good seller.

AFFIDAVIT.

State of Ohio } ss.
County of Butler }

James A. Aupperle, being first duly sworn, deposes and says that he is a resident of Middletown, State of Ohio, County of Butler, and that he is skilled in the analysis of iron and steel.

Affiant deposes and says that the nails, described in affidavit by Hawkins Clear under date of September 24, 1914, and photographed under No. 1597, were submitted for chemical analysis.

Affiant further deposes and says that the several nails were carefully cleaned and machined and the combined sample was analyzed with the following results:

Sulphur	.007
Phosphorus	.100
Carbon	.020
Manganese	.004
Silicon	trace
Copper	trace
Oxygen	.021
Nitrogen	.008
Hydrogen	trace
Iron (By difference)	99.830

Affiant further deposes and says that all of the above is within his personal knowledge and the facts as stated are true.

James A. Aupperle.

SWORN to and subscribed before me this 30th day of September, A.D. 1914.

Notary Public.

Hawkins Clear

Nails Taken from Grave

AFFIDAVIT.

State of Ohio } ss.
County of Preble }

Hawkins Clear, being first duly sworn, deposes and says that he is a resident of Eaton, Ohio, County of Preble, and that he is assistant to the Sexton of the Mound Hill Cemetery.

Affiant deposes and says that Robert Boling, the largest soldier buried in Fort St. Clair Cemetery, who is described as having been 6 feet and 4 inches in height, was buried November 6, 1792, and disinterred November 3, 1892. The said Robert Boling had therefore been buried for 100 years.

Affidavit is made that owing to the size of Robert Boling the records are authentic.

Affiant also deposes and says that on November 3, 1892, when Robert Boling was disinterred, several nails were taken from the box in which the casket had reposed, the said nails having been in deponent's possession from November 3, 1892, until handed to a representative of the American Rolling Mill Company

Affiant further deposes and says that the photograph, number 1597, showing four nails, truly represents the nails in his possession for the above stated period.

Affiant further states that all of the above facts are within his personal knowledge and that the above statements are true.

Hawkins Clear

SWORN to and subscribed before me this 24 day of September A.D. 1914.

Notary public.

AFTER A CENTURY IN THE GROUND PURE IRON NAILS UNHARMED BY RUST

A striking instance of the effectiveness of high purity in enabling iron to resist corrosion. These nails were used in the coffin of a United States soldier, buried at Fort St. Clair, Ohio, in 1792. The coffin was exhumed in 1892, and the nails were found in good condition,—but very slightly affected by rust. Analysis shows that they closely resemble Armco (American Ingot) Iron, being very low in Carbon, Manganese and Oxygen and having but a trace of Copper. Their total iron content is 99.83 per cent.

Armco Iron's guaranteed standard is **not less than** 99.84 per cent. pure iron.

The trade mark **ARMCO** carries the assurance that iron bearing that mark is manufactured by The American Rolling Mill Company with the skill, intelligence and fidelity associated with its products, and hence can be depended upon to possess in the highest degree the merit claimed for it.

The American Rolling Mill Company

Middletown, Ohio

Licensed Manufacturers Under Patents Granted to The International Metal Products Co.

BLACK PORTABLE BASKET

Classy Hearth Furniture

at an easy selling price

Almost daily you have customers in your store enquiring about some device or other related to home heating. Many of these can be made ready buyers of

Fire Irons, Andirons, Portable Baskets, Grate Guards and Spark Guards

Note the attractive portable Basket, as illustrated herewith. Our Catalogue shows other styles and other specialties. Use it to make sales. But it is wise to have some stock. The necessary investment is small. Send for Catalogue and price list and turn customers' present interest and enquiries to profitable account.

WINFIELD BREWSTER **HESPELER, ONT.**

The "Handy" ICE PICK

is without doubt, the most practical and convenient Household Pick on the market.

Spring is of Phosphor Bronze, the blade of finest quality crucible steel, and the barrel is of brass.

The hexagon head prevents the pick from rolling off smooth surfaces, and is extremely heavy for a pick of this size, and most convenient for breaking ice in the palm of the hand.

SAVES ICE

The "Handy" has an **exclusive feature** in the TRIANGULAR POINT which causes the ice to break clean, thus doing away with the annoyance of having the ice crumble into small pieces—which means **waste.**

We offer you this wonderful little pick with attractive display box.

It's a **dandy seller** and a **good profit maker.**

The Great Advantage of EASYON TIRE CHAINS

The great advantage of EASYON CHAINS lies in the fact that they can be applied and removed so easily even after one gets stuck in the mud.

EASYON CHAINS are just the thing for use with non-skid tires to give the extra grip on the road that is needed when running in deep mud and snow or on ice. They also make a very neat, light and convenient non-skid for front wheels to prevent side-slipping.

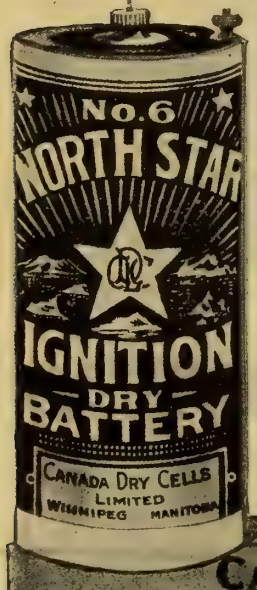
EASYON CHAINS wear longer than others, they cost less, and it is much easier and less expensive to renew the cross chains.

There's big money in selling them and sure satisfaction behind them.

It requires only a small investment to carry a stock of EASYON CHAINS and get the chain business of your automobile owning customers.

EASYON CHAINS are especially convenient for dealers, because with a stock of only three sizes the dealer can fit all sizes of tires.

EASYON CHAINS are packed a set of 8 in a bag, four for each rear wheel, enough to give a good grip on any road.



Size 3½	fits 3″	or 3½″	tires.	Retails at	$2.40	per set.

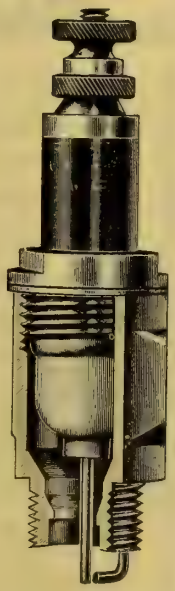
"FRANCO" Christmas Tree Outfit

It is a safe, sane, inexpensive way of lighting Christmas trees. Prettier than candles—no danger — no worry about fire.



The cost is small, your profits big.

If there is no electricity in the home **a battery can be used** with equal advantage.

Interstate Electric Novelty Co. of Canada, Ltd.

TORONTO 220 King St. West ONTARIO

SOOTLESS SPARK PLUGS

This plug increases the protection on the engine end of the plug by adding a porcelain cap, so arranged and enclosed that it is protected against breakage, and yet gives plenty of air space between the porcelain (within the firing chamber) and the outer steel shell. This renders the chance of short-circuiting through carbon formation exceedingly remote. The plug is so constructed that the high pressure, due to compression, tends to tighten rather than to loosen it. Being practically oil and soot-proof, it is especially adapted for use in air-cooled engines that use a large amount of lubricating oil.

Vol. 28 TORONTO, OCTOBER 21, 1916 No. 43

Ontario R.M.A. Plans Are Changed

Membership Fee to be Raised to $10 a Year—Some Doubt as to Question of Paying For Financial Paper to be Supplied Members—Full Meeting of Board to be Called.

FOLLOWING the announcement in HARDWARE AND METAL last week of the new plans of the Ontario Board of the Retail Merchants' Association, the matter has been reopened. The proposition as outlined then has been abandoned, and a new arrangement has been drawn up, which has had the endorsation of the executive members. It will be submitted for ratification at a meeting of the full Ontario Board, to be called shortly.

The first arrangement was to raise the membership fee from $6 to $15 and to supply the members with a Montreal financial paper and one trade paper to be selected by each individual member. Out of the $15 fee, payment would be made to the Montreal financial paper of a proportion of the subscription, and also to such trade papers as were supplied under the arrangement. Mr. Beaudry, treasurer of the Dominion Board was to be appointed manager, treasurer and trustee of the Ontario Board, with full power to handle the affairs of the provincial association and to make whatever arrangements he found necessary to liquidate the deficit of the Ontario Association.

In the course of the wide discussion in R. M. A. circles that followed the announcement of this plan, it developed that the proposition, although it was announced as coming from the Dominion Board, had not in reality received the sanction of the Dominion Board. Certain Dominion officers had favored it, but definite ratification had not been secured. It developed, in fact, that such an arrangement would not be legal under the constitution, Secretary Trowern pointing out that the Dominion Board could take only $1 per member from any provincial association, while the Ontario proposition called for a larger contribution to Dominion funds. In any case it was decided that the proposition as first outlined would not be acceptable, and a new plan was submitted at a meeting of the Ontario executive held in Toronto this week.

The New Plan

The new plan is to raise the membership fee from $6 to $10. This sum will be divided as follows:—$1 to the local association, $1 to Dominion Board, $4 for organization purposes, $4 for Provincial Board. The Provincial Board will supply members with the weekly Montreal financial paper.

The Dominion secretary, Mr. Trowern, is to start a weekly bulletin service of news of the association, which will be sent to all trade papers as well as to the Montreal publication. The arrangement putting Mr. Beaudry in as manager, treasurer and trustee of the Ontario Board was ratified. Mr. Beaudry will not receive any salary in this capacity.

This, in brief, is the outline of the new arrangement, but in certain details it still seems uncertain, and it is probable that more definite arrangements will have to be made. For instance, although the financial paper in question is to be supplied, the official resolution, ratified by the executive, does not specify on what terms this is to be handled other than that anything paid for it will come out of the $10 fee. Mr. Trowern informed HARDWARE AND METAL definitely that the paper would be supplied by the publishers direct to the members, and that it would be free. This arrangement, however, would be contrary to postal regulations, and it is certain that the arrangement cannot be left on that basis. Another member of the executive stated that his understanding of this part was that the Ontario Board would supply the paper, but that the arrangements made with the publishers could not be announced. A definite plan will be arranged for submission to the full meeting of the board.

The Provincial Board consists of one representative from each local association. A full meeting will be called within the next three weeks to discuss the proposition as it now stands.

Not in Other Provinces

Mr. Trowern states that the new proposition applies to Ontario only, and will not be submitted in other provinces. Fees paid in other provinces are already higher than in Ontario.

Organization in Quebec

It is understood that a strong organization campaign is to be launched in Quebec at once, and that Mr. Beaudry is accepting a position on salary in that province to handle association affairs generally and to direct the campaign.

AUTO ACCESSORY ARTICLES.

On succeeding pages will be found articles dealing with auto accessories as handled in hardware stores. Of particular importance is the account of the formal opening of an accessory department in the James Walker Hardware Co., Montreal. The entry of this firm into the trade that has grown up around the automobile is significant, as it points out the opportunity that lies before all hardware stores which have not "taken the plunge." The Walker store has gone into the line with a thoroughness that demonstrates the belief they have in the magnitude of the opportunity.

That "Immediate" Quality in Service

Is the Aim and the Achievement of the New Automobile Accessory Department Just Opened by James Walker Hardware Co., of Montreal—How the Idea Has Been Realized

WITH an evident and growing demand for automobile accessories experienced in a dozen, a score, and a hundred different points of contact between firm and customer, the James Walker Hardware Co. of Montreal also experienced since the war a slackening in the demand for their great special line—Builders' Hardware. The excellent organization developed in years by this firm for the speedy handling and delivery of builders' hardware the retail and wholesale customers was running at low pressure. F. M. Hill, manager of the firm, quietly put two and two together and arrived at the decision to introduce an automobile accessory on a scale so as to utilize the whole strength of the organization in the same efficient manner to produce service and delivery of the automobile accessories supplied as had prevailed in regard to the builders' hardware department.

Noting that retail business began to show better results in profits than the jobbing business had shown in past periods of comparison, Mr. Hill also decided to intensify on this line while not by any means discontinuing the wholesale business. On the contrary, he planned, and is planning, to strengthen it, especially as regards automobile accessories. These briefly are the reasons and causes behind the boldly spread announcement over two whole pages of a Montreal daily newspaper on Saturday, 16th September, that the James Walker Hardware Co. was opening that day its Automobile Accessory Department for wholesale and for retail business.

STANTON LATHAM

Manager of the Auto Accessory Dept., James Walker Hardware Co.

In charge of the new department is Stanton Latham, for five years formerly with John Millen & Son. In an interview with Mr. Latham, HARDWARE AND METAL this week heard some of the intentions and achievements of the new James Walker Automobile Accessory Department.

Quick, reliable service to the down town retail customer is one of the very first of these. The motorist who enters the store for any accessory is going to get swift service, prompt advice if he requires it, and, above all things, the very best in quality of accessories at the price that is most reasonable—not necessarily cheapest—for the accessories supplied. Right facing the customer on reaching the accessory department is a white board bearing in big letters at the top the words, "AUTO SUGGESTIONS," followed by a list of many most useful accessories, and their prices, and at the very end again in big type, the suggestion, "ASK FOR IT."

In front and side windows, and throughout the department, are arranged the principal lines of accessories, tires, oils, horns, repair outfits, and the many things required by the automobilist. Only goods of the most approved quality are stocked. The aim of the firm is not to meet cheap prices, but to show customers value, and above all the **immediate** sort of service they have been hunting for far and wide.

While ready to advise on matters affecting the automobile accessory business where it just touches the indistinct border line between the accessory department proper and the department of repairs, while ready to help and help handily when customers are in difficulty of any kind, the James Walker Automobile Accessory Department is designed primarily for the accessory busi-

A view of the store front of the James Walker Hardware Co. at time of formal opening.

ness pure and straight. All things legitimately in the field of accessories will be found there and all reliable. The firm's name is behind everything it sells. Such articles as oil, and storage batteries are stocked in certain special and most reliable lines and makes. Special displays of these will be arranged from time to time. The aim of the first window displays arranged was to show the variety and range of the accessory department, also its quality aims, while the service behind was emphasized in every possible way. The splendid spread of two whole pages in the newspaper was planned to do honor to the opening of a department come to stay, and come to fill a distinct need in the business as discovered by the management.

In addition to the retail business, which is rapidly growing as a result of accurately proportioned advertising, and the confidence of customers in the firm's power to deliver the goods, the James Walker Co. is arranging to take care of a considerable jobbing trade as well, and is bringing out, in January, 1917, a catalogue of accessories which will be something worthy of note by the trade at large. At present, while the catalogue is in the making, the firm can look after retail business, and supply the demand from retailers of hardware who are coming into line with the trend of the period and taking up the automobile accessory business. From its own experience the firm is able to advise firms making a start in this line, and the range of accessories that the James Walker Co. can supply is wide and of first rate quality.

Winter Accessory Trade Offers Big Field

Cold Months Require Many Articles to Make Motoring Comfortable—Also Good Field to Urge as Gifts for Christmastime—Make Welcome and Substantial Presents.

NOW that the winter season is approaching, many hardwaremen who handle automobile accessories, will have an opportunity to keep their trade going right throughout the year if they use the right methods and get the right kind of publicity. There are innumerable accessories that make motoring in winter not only possible but a pleasure. One of the essentials is, of course, to have something that will keep the engine from freezing. An anti-freeze material for the radiator is the first requirement. One large supply house in Toronto has issued a fall and winter bulletin detailing specialties for the Ford and Chevrolet cars. Some 50,000 of these bulletins were printed and are being sent to every owner in the Dominion. "They are getting the business. We are having fine results from them," said the representative of the accessory house in question. "The tendency to store a car for the entire winter is fast becoming obsolete, except in such localities where deep snow and extreme cold weather prevents. This condition of affairs is due in a great measure to the comforts and conveniences afforded by such articles that can easily be carried in the stock of every hardwareman who carries a line of accessories. The automobile owner is very ready to utilize his car all winter if he can be shown where he can use it with comfort and safety. With hands protected by wool-lined gauntlets and a wool-lined band of cap drawn over the ears and feet kept warm by a heater, with a suitable lap robe, the motorist is in a position to enjoy the exhilarating fall air and invigorating winter atmosphere," continued the accessory man.

"One of the very necessary things is to have a good anti-freeze solution. There are a number of solutions on the market, some of which are cheap chemically prepared mixtures that contain salt, calcium chloride, or other minerals. These often cause damage to the entire water system through rust and corrosion. With the use of a freezometer, the exact freezing-point of the radiator can be determined. This is one of the necessary things that the owner of a car should have, in order to safeguard against freezing. There are many lines that can be effectively urged on the owners of cars.

"There are engine hood covers, which are very necessary in the colder climates. These covers not only prevent water from freezing in the radiator and water-jackets of cylinders, but by keeping the heat in it induces easy starting. Then tire chains are in great demand during the winter months. They prevent skidding on wet, slippery roads and give positive traction to drive the car through mud or snow. Then there are many mechanical devices such as shock absorbers, auxiliary radius rods, rear axle trusses, and other things that are particularly required in the fall and winter months in order to increase the riding comfort and strengthen the car for use on rough, frozen roads.

Christmas Presents in Demand

"With the shortening of the daylight there is a call for early lighting of lamps on cars and lighting systems are a fruitful field for the dealer in accessories. Then, too, there is no more substantial line of gifts for the Christmas season than gifts for the motorist. It makes a selection easy when a friend is a motorist, for there is always such a variety of articles that can be presented and which will give real inward delight. The list is numerous and includes such things as clocks, mirrors, bumpers, horns, seat covers, shock absorbers, spare tires, gauntlets, goggles, foot warmers, lap robes, tools of various kinds to make the kit more complete, electric headlights, dry battery tail lamps and hydrometers for testing the gasoline to see that the proper grade is secured. To these many more can be added that will delight the heart of any motorist. With a selection of articles such as that contained in a well-stocked motor accessory line a real service is performed in helping friends make a selection of useful presents for those of their friends who are devotees of winter motoring."

With all the variety of accessories that are now available, the hardwaremen should find the winter season one that is prolific of much trade. It is then that accessories are more in demand, perhaps, than in the summer months. It is necessary that motoring be made comfortable and to this end suggestion to car owners will greatly assist in developing the accessory trade. It is a trade that requires careful publicity in order that it might be rightly developed. That there is a big field for it there can be no doubt.

Why Business Men Fail

An Analysis of the Reasons Which Account for Failure — How Some Successful Business Men Have Managed to Overcome Their Weakest Points.

AN article appears in *System*, the Magazine of Business, under the title "Can we explain why business men fail?" It deals very comprehensively with the elements that make for success or failure and, although the points adduced do not always bear on direct retailing problems, the whole article is of such vital interest for the merchant that it is reproduced herewith:—

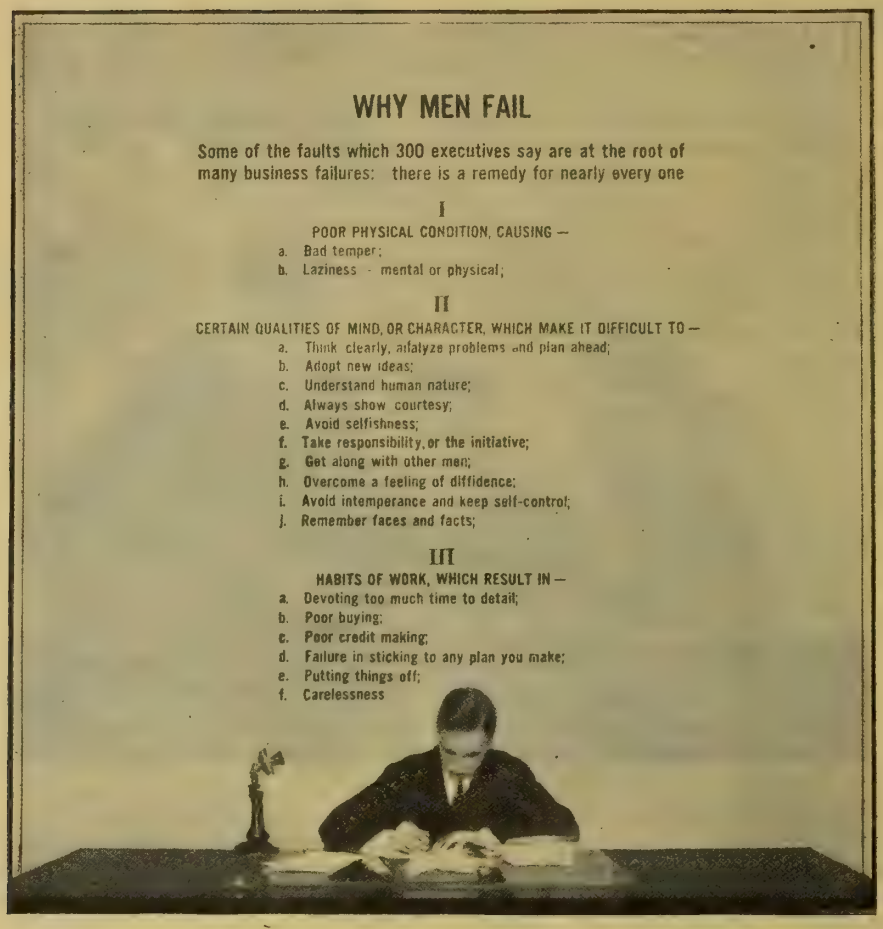
Business is full of contradictory legends of its men of genius; of amazing judges of human nature; men who followed one idea through life—had a thousand; managers who labored "like horses," attributing their success to good old-fashioned hard work — and others who won as by a flash of insight; men who rose by sheer hanging on—and others who showed their gift by making a complete change after forty. How much of it, when all's said, holds good? What personal qualities actually distinguish the man who goes marching up through achievement after achievement from his desk neighbor who cracks under the responsibility of guarding a ten or twenty thousand dollar investment?

Broach this question and you have the ear of every manager, everyone who is employing, using—attempting to develop—other men. For you are not merely dealing with a side of business which is still in the stage of tradition—you are tackling the inmost mysterious question of personal efficiency. And the reasons for success or failure, the chances of the game and the run of the cards, make poker seem mathematical by comparison.

Every man in business who expects to be a general officer—and every group of men in control of a great enterprise—is effective in proportion as he or they show a blend of personal qualities that meets all the needs of the business and checks whatever weaknesses exist. What, in the opinion of practical business men, should this blend include—and how can an employer develop it in his men?

Marshall, the English economist, says that promptness, judgment, resource, carefulness, and steadfastness of purpose are the chief materials of which business ability consists, rather than any specialized skill or craftsmanship. Having these qualities, he asserts, a man should not only rise rapidly in one line, but may change to a quite different business and continue successfully. I have recently been working with a man who illustrates this belief. At forty he is

king pin of three successful corporations making quite different products. He has never had any "specialized skill," but the five prime qualities Marshall names are certainly native in him.



These causes of failure split roughly into three classes. A few of them, such as "laziness" and "bad temper," may go back to poor physical condition. Others, such as "guesswork," "lack of study," "untrained employees," and "lack of system," are probably mere habits of work. But most of the troubles, after all, strike deeper; they are plainly mental kinks of flat sides on the wheel of character. Here is an abbreviated list:—

Suspicion.
Lack of decision.
Failure.
"Do it to-morrow."
Over-indulgence.
Conceit.
"Nobody can tell me anything."
"My grandfather did it this way."
"I never learn from others."
"My mind is made up."
Indifference.
Carelessness.
"My theory would have worked, but—"
Temptation.
Misuse of credit.
Stubbornness.
Poor memory.
Poor supervision.

Every manager will recognize in this list many a little blue devil that spoiled a good man for him. But will he apply the set to himself? Will he take seriously any of the similar lists which various efficiency "fans" have put into print?

Boyd Fisher has been reminding factory managers over at Detroit that "a stream can rise no higher than its source." "I am convinced," says he; "that one-third of the average manager's time is properly taken up with the effort to improve his thinking, his work habits and his health." So thoroughly does *System* believe in this new item of "manager maintenance" that it asked the three hundred men who contributed to this series some very frank questions about their own mistakes and successes, and about their most valuable men. The replies are at least interesting, as showing what the actual heads of concerns and departments think about business ability. Coupled with careful character studies which were made by members of *System*'s staff of many prominent business men during extended interviews, they may be more than merely interesting.

The first thing that is evident from a survey of these thousands of replies is that business men are not stopping with outward efficiency—mere time schedules, filing schemes and desk methods. They are going even deeper than questions of health, help and social life—though they have some things to say about this side of efficiency which might warrant an article. Beyond question, they are directly and earnestly engaged in the tedious, rather abstract work of further balancing up their own faults and developing their personal powers.

Best Ways to Remedy Common Faults

Four questions were asked by *System*, with the purpose of showing up business men's weak points, indicating their most valuable qualities, contributing suggestions on how to pick men of calibre and how to strengthen oneself or one's associates. The questions were:—

(1) What blunders do you observe men in business making most frequently and what qualities do they seem to lack?

(2) Think of the three best men in your business—what qualities brought them promotion?

(3) How would you train a son of yours to take your place and go ahead with the business?

(4) In yourself, how have you strengthened the business qualities that seemed weakest?

Practically half of those who answered the first query put at the head of the list the inability to think, to analyze, to exercise judgment — or narrowness and unwillingness to see more than one side to a question. Sometimes the charge is put in a general way, as: "feeble thinking," "snap decisions," "arguing," "doesn't cut to the core of a problem and settle that," "fails to eliminate non-essentials." "fails to understand basic conditions," "not making a thorough study of the problem," "not getting a broad view," "seeing only his own side," "not seeing all sides, including the customer's, and deciding for himself," "inability or unwillingness to adopt new ideas."

Other men suggest how this inability to think works out in particular cases they have observed. "Never know they are losing ground," says one. "Lack of observation," writes another. Lack of foresight, working too much in the present, ignoring suggestions of subordinates, not reading what other men have learned, not recognizing that a working force must be educated before it can do intelligent work, not recognizing when they (salesmen) have closed their argument, and lack of judgment due to over-enthusiasm, are a few of the pertinent answers.

That men in business still hang on to detail too closely is a common criticism among those brought together by *System's* investigation. One answer in twelve included this point. "The manager confines his attention to one or two departments and neglects the others," one executive said emphatically. "Too much routine—failure to take advantage of the brains of the staff," wrote another. "They don't 'let George do it,' while they keep a steady hand on the pulse of things," runs a third reply.

Human Nature With Success

Knowledge of men is always attributed to practically every one of the famous old-time heads of big enterprises, such as railroads and packing industries, and the lack of it was mentioned many times among the replies as one of the serious defects in ambitious men. That business men too often do not analyze themselves, that they fail to appreciate the all-important viewpoint of their customers, that they neglect the rights, feelings and suggestions of inferiors, falsely estimate the strength of those whom they make their opponents, and do not bring out all that is in their help, are some of the explanations of failures given by the men who answered *System's* questions.

"A florist failed," says a university professor by way of illustration, "because he attempted to run a small-town business on the city plan of separating green house from store, and invested too much in novelties which did not sell out clean. He was probably driven to these illogical expedients because he had failed to understand people. He had been economizing, for instance, on inefficient help, and had handled his credits in such a blundering way as to offend many good 'risks' without dodging the really bad accounts."

Blunders in buying and credit making are frequently mentioned among the answers, but the inability to read people seems to be the underlying fault in most of the cases. "Men are too free with credits," says one; "poor buyers," writes another. "Too sympathetic"; "too lenient"; "try to sell something scarcely anyone wants"; "pay more attention to selling than to buying and collecting"; "advertise themselves instead of their goods"; "cater to their own tastes rather than the public's"—several men suggest.

Some of the criticisms offered take an even more frank tack. That business men lack courtesy is acknowledged by several. One believes they can not say "No!" as they should, and another that they say it too easily, when a salesman has something worth their attention. That they are often not suited nor prepared for the positions they try to fill, yet have exalted opinions of themselves and readily take on things outside their specific training, is the observation of a number. This happy-go-lucky way of doing things expresses itself, according to one executive, in "poor and illogical organization," and particularly in departments rooted in tradition, where undefined zones of work keep men clashing and jealous.

Cultivate the Point of View of "the Other Fellow."

"Acquisitiveness," the character analyst will tell you, is essential to success in business. "Selfishness," according to four men who answered this question, is a common handicap to men who otherwise might go high. "Business men too often have ignoble aims," says one

executive. "We all overreach ourselves at times," a high official told me. "Poise and self-confidence are fine things," commented another, "but it is easy to be so self-centred that you fail to give customers the enthusiastic attention and deft service which will bring them back in a buying state of mind. In fact, many houses 'barely exist' simply because they have never got acquainted with their true selves."

How the positive of this quality can be developed is told by an automobile dealer out in Iowa. "Just think of the other fellow and you'll succeed," he writes. "I was weak in my ability to meet men. So I have practised this. When a customer comes in, I go and shake hands with him and tell him, 'Gee but I'm glad to see you'—and I've trained myself not only to feel that way, but to speak in a tone that absolutely convinces him I am in earnest. A customer told me just recently: "I always come to your store first when I am in town, because you make me feel so welcome that I have to, whether I need anything or not.' "

How much these qualities may add to the total of a man's business power may be debated, but there are three other criticisms among those brought together by System which are fundamental: that men fail to measure up to the calls of business because they lack (1) carefulness; (2) concentration; (3) responsibility. "Business men do not know their costs"—"are careless and ignorant of figures"—"often overdraw their accounts in sheer ignorance" — "are too lenient with those who owe them"—these are some of the charges.

A half dozen men among those who replied to System's questions emphasized the first of these points: that men cannot concentrate, or as Marshall has it, lack "steadfastness." "They cannot keep up a sustained effort"; "allow themselves to become distracted"; "cannot hold themselves to the rules of health and time and study they lay down"; "neglect the necessity of experience"; "become perfunctory"; "have not the imagination essential to the creation of great enterprises" — these are some of the observations on this subject. And judging from System's extended contact with many business men, no criticism apparently comes nearer home.

Did Not Like to Take Responsibility

I was sitting recently with the head of the foreign department of a bank when a young business man came in and attempted to persuade that seasoned financier that the bank rather than he should take the risk of a certain international credit. The debtor house had repeatedly been a customer of his, but the bank had never heard of it. The banker tried to laugh the young fellow out of the idea that the bank, a total stranger, could pass credit on a risk he was unwilling to assume. But when we were alone again, the banker threw up his hands impatiently. "Why is it," he exclaimed; "that business men will not accept the responsibilities which belong only to them?"

How Some Executives Train Their Assistants

It is a criticism that bobs up again and again among the answers to System's questions. The "boss," growing old, cannot find assistants who can and will see that things are done. Many men seem to take the position of working by the clock and waiting for orders. Among the excuses advanced by them, one may be sound; that the authority delegated them is often mere pretence. The general superintendent of one of the nation's largest steel mills told me with modest pride how he had developed twelve general superintendents out of his staff of young men. He seems to have no trouble finding men who will take the responsibility; but he gives them a load to carry and leaves them no doubt that it is theirs—to handle or to drop.

The man who makes excuses — who seems unable to decide or act without being prompted—usually is in a mental rut that calls for the application of a shrewd psychology by his superiors. It may be laziness or dullness that makes him hang fire; but plain fear, several executives charge, is often the bottom trouble. "Druggists are afraid," says a druggist, who by working along original lines has in a decade built a struggling store into a flourishing one. The ability to trust oneself to disregard the conventional method, to see straight and act without looking behind you for backing, is a scarce article—but one that grows with each success and each bit of encouragement.

"There is too much conferring and not enough trusting to the initiative of well-chosen department heads," conclude two successful executives. Observations suggest that business men do not yet value as they should the interchange of ideas—the efficacy of "talking things out in committee." But the idea of some men have that a conference must vote every time it assembles is pathetic. Only by carrying greater and greater weights can a man develop his ability to handle steel or concrete; only by assuming increasing responsibility can men grow in initiative. And the demand of a business for quick action on hundreds of matters usually finds the committee method too cumbrous as well as too vague. Everybody's business is still nobody's business.

The same two points that stand out as criticisms lead the list of reasons for promoting men assembled as a result of investigations: (1) ability to think and plan; (2) ability to take the initiative and assume responsibility. "Constructive initiative coupled with the application of good common sense, added to whatever native abilities a man may have, 'make good'—and deserve it," one manager writes. "Resourcefulness in emergencies" is a special statement of the same idea.

Some of the Qualities

Loyalty to the business ranks very high—but it is still the kind of loyalty that begins at the bottom, works through all departments and spends long hours in the business or in special studies bearing on it. Tact, diplomacy, affability and knack in handling men ("especially union men") are other much-sought qualities. Enthusiasm, honesty, steadiness and energy or "interest" or "alertness" evidently have a live market. "Desire for authority and responsibility, backed by sufficient will power," is the less perfunctory way one manager has of expressing the ambition he must see in the man he advances.

A reply that brings out several inter-

MASKED milk-raiders are operating in the Mohawk Valley, New York State. What with lynching parties and tobacco night-riders in Kentucky and now milk-raiders, Uncle Sam has a jolly time o'nights.

* * *

LUDGWIG W. SCHMIDT, writing in the *Paint and Varnish Record,* states that the idea of a war like the present seemed to be the dream of a disordered brain, and here we are in the midst of the great *debacle.*

115,000 *CARS IN CANADA*

ACCORDING to a conservative estimate there will be 115,000 automobiles in use in Canada by the end of 1916. In other words one out of every 70 people in Canada operates a motor car.

It requires over 60,000,000 gallons of gasoline, worth approximately 16½ million dollars to furnish power for cars driven by Canadian owners. A few of the other items are, 1,250,000 gallons of lubricating oil worth approximately one million dollars; 800,000 tires averaging about $20 each or a total of 16 million dollars; accessories such as polish, goggles, caps, horns, lamps, tools, tire holders, gloves, etc., approximately $50 per car, or a total of 5¾ million dollars; repairs (exclusive of tires) made necessary by wear and tear, etc., 5¾ million dollars. The foregoing all conservatively estimated make a total of 45 million dollars expended in a year by Canadian car owners.

Supposing this entire business was handled by the Canadian retail hardware trade. There would be over $11,000 worth of business yearly for every retail hardware merchant in the Dominion, even including the hardware merchants in the smaller towns and villages.

How much of the auto accessory trade are you securing in your store Mr. Merchant? Possibly you are securing a much greater share than has been mentioned. Many Canadian retail hardware merchants are. But there are many others who have not yet investigated the immense possibilities which exist for supplying the needs of the autoists. A great many auto owners are good spenders and they have the cash to purchase what they need.

The writer was in a retail store recently when an auto owner motored up to the store. He entered and asked for a certain kind of wrench. The clerk accommodated him. While wrapping up the wrench the clerk directed the attention of the auto owner to a display case of accessories nearby. Before the clerk had finished with the auto owner the list of goods purchased totaled $70. It included several items, from a can of polish to a spare tire. The customer went in to buy a wrench valued at $1.50 and the clerk sold $70 worth of goods in less than twenty minutes. Not bad business you say, but it couldn't be done every day. Possibly not. You don't sell $70 worth of cutlery or builders' hardware every day, but you cannot afford not to carry those lines in stock. With auto accessories it is not necessary for the merchant to stock up heavily. Good assortments can be secured for $50 or $100, and added to as necessity arises. Not a few hardware merchants who started to stock auto accessories in a small way, have developed the department until it is now one of the best paying departments in the store. There is an

immense field for the sale of auto accessories, but like every other line the goods have to be displayed, talked and pushed if a success is to be made. Some accessories will sell themselves, but to make a big success of the line the merchant and his sales staff must be on the job.

NEW PROPOSALS OF THE R. M. A.

THE plans of the Ontario Provincial Board of the R.M.A., as announced last week, which included an increase in fees from $6 yearly to $15, have been withdrawn. It is not necessary, therefore, to enter into any discussion on the proposed terms other than to point out that the arrangements, which had been adopted rather hastily and without the full consideration necessary, were certain not to prove acceptable to the members. This fact was clearly demonstrated by the letters and personal messages which reached this office after the publication of the details. It was made very clear that the proposals would not find favor with the members. However, the executive members had become convinced that the plan was not feasible, and in the interval they have drafted a modified plan which is explained in another part of this issue.

This second proposal is to be submitted for ratification at a full meeting of the Ontario Board; and HARDWARE AND METAL desires to urge that in the meantime the full details of the plan be announced. Members of the association should know definitely to what they are being committed. It is not intended to imply that the elected executive members of the executive are not capable of handling this or any other situation. They have proven capable, self-sacrificing officers; but it is always good business to let the shareholders of any concern know what is being done. In this connection the individual member of the R. M. A. stands in the position of a shareholder. A very important change is contemplated and each member has the right to know what is going to be done with the increased fee that he pays. It is perhaps true that the affairs of the association have reached a stage where centralized control and authority is necessary, but no arrangement should be ratified which leaves power to conclude agreements for the disposal of any share of the funds. Let the complete plan be laid before the Ontario board when it meets; and let the members in general know everything there is to be known beforehand. Nothing is to be lost by publicity if the plan is thoroughly practical and well designed to meet conditions. Secrecy in any detail, on the other hand, will have the effect of arousing doubt in the minds of members at a time when, with increased fees on the tapis, their utmost confidence is needed.

In this connection also, HARDWARE AND METAL feels called upon to urge most strongly that annual financial statements be presented to the members in future. It is not satisfactory to the merchant when he does not know how matters stand to the last detail.

BROOMS ARE SOARING

CONDITIONS in the broom market are in a panicky condition. An unusual condition has arisen this year in that manufacturers will have to pay exceptionally high prices for broom corn. Broom corn in the United States is now selling at $175 to $200 per ton, while in a normal year in the past the prices ranged from $60 to $125 per ton. When the broom corn is laid down in Toronto it costs the manufacturer in the neighborhood of $240 per ton, duty and freight paid. This year there were no stocks of broom corn carried over from last year, which has usually been the case in the past. The crop in the Western United States has been short and the demand for brooms has been good. Manufacturers in the United States, when they found that there was to be no surplus from last year, went into the market and bought all they could get their hands on. This sent the prices skyrocketing.

Some dealers assert their belief that prices for brooms will in all probability be 50 per cent. higher by spring time. During the past week or ten days prices on all grades of brooms have advanced from 75c to $1 per dozen. One of the Canadian manufacturers who recently returned from a trip to Chicago stated to HARDWARE AND METAL that the warehouses for broom corn are practically empty. In the United States the cheapest broom that will be put on the market this year will be $4.50 per dozen. In Canada the cheapest grade will probably run $5 per dozen. This will mean that there will be no 25c brooms and no 40-cent line. The cheapest broom will be 50c and will range up in price to $1.

For the past two years the yield of broom corn has steadily decreased and the consumption of brooms from all appearances has steadily increased. The equalizing point has been reached and passed, with the result that the surplus stock of broom corn in the United States has been used up, forcing manufacturers to depend on the short crop of this season.

There has been a good demand for brooms, due to the excellent industrial conditions in Canada. There are other factors besides that have contributed to send brooms to record levels. Wire has doubled in price, corn, as stated, has almost doubled, the wooden handles are much higher in price; tacks and locks are all higher in price and labor has also been more expensive. All these conditions have assisted in the upward trend of prices.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

MARKETS AT A GLANCE

One of the heaviest budgets of price changes in many weeks has gone into effect this week on hardware lines. Practically all changes represent higher prices and the end is not yet in sight. Some of the lines on which advances have taken place are cut nails, screw hooks and eyes, shelf hardware lines, pressed spikes, cotton clothes line, sash cord, pig-iron, boiler tubes, corn huskers, screen doors and windows, washing machines, corn brooms, turpentine, brass goods, railroad spikes, working mitts, stove pipes, shellac, files. Prices on many lines of iron and steel have been withdrawn. On other lines prices are merely nominal. The market is in a totally unprecedented condition. What was thought impossible a few months ago, has happened on many lines. Despite the high prices business continues good. Owing to the scarcity of help many manufacturers are unable to keep up to the demands made upon them for goods. The railroads are in much the same condition and delays in deliveries are causing an endless amount of trouble to wholesalers and retailers. Reports from the West state that business is now rather unsettled. Heavy orders are coming in from some districts, while from others the orders are light. Collections generally are good. A number of further advances are expected, as indicated in the reports which follow.

MONTREAL MARKETS

MONTREAL, Oct. 18.—Prices persist in climbing, but business keeps good notwithstanding, especially in the rural districts. Demand is reported excellent, and cash in sight every time for deliveries. Deliveries are the difficult factor, however. Hardware wholesalers hope for better things, but prepare for worse in this respect, and doing their utmost to meet demand, find themselves still handicapped on every side by labor shortage, and rising prices of materials retarding manufacture. A great scarcity of charcoal tin and terne plates became apparent in Montreal this week, and quotations are regarded as merely nominal under the circumstances.

Labor is very hard to get, especially skilled labor. One manufacturing firm hiring 20 men found at the end of the day that only one had made good. The rest did their best, but had not the training necessary. Many new increases in shelf hardware and iron and steel products will be noted this week.

Iron and Steel Keep Very Firm

IRON AND STEEL.—Always the firming tendency is apparent in all iron and steel products, due to the intensely firm condition of the market, the difficulty as regards deliveries, and the lack of labor at the manufactories. This week finds finished machinery iron at $3.55 per 100 lbs., tire steel at $3.60 per 100 lbs., and band steel at $3.70, all shaded upwards, and more than shaded. Common wrought iron is at $3.55 base at present. Anvils are up 2c a pound. Peter Wright anvils, 80 lbs. and up, are at 15½c a pound. Peter Wright vises, 45 lbs. and up, are at 18½c per lb. Plain cauldrons are at 5¼c per lb. now, and with flanged cover $5.50 per 100 lbs. Bessemer steel (Cokes Bright) is up in price, 10 x 14 x 20 base being now $7.50, instead of $6.50, and double box, 20 x 28, $15, instead of $13.

Halter and Cow Chain Increased

U. S. halter and cow chain shows an increase in price to the extent of 5 per cent. this week, in line with iron and steel wire products, and new prices are expected soon on lapwelded boiler tubes.

Great Lack of Tin and Terne Plate

Almost an absolute dearth of charcoal tinplate exists on the market at present. Dealers have been scouring the sources in vain for supplies. The market seems also almost entirely bare of charcoal terne plates, and prices as quoted to-day in current quotations are considered by leading men in the trade as practically nominal, there being so much difficulty in securing supplies at all.

Increase in Nails and in Ship Spikes

An increase of 25c per box over list prices on all Capewell horse nails, and also an increase of 20c on pressed or ship spikes are to be recorded this week. This is in line with the general trend of the market for the metal of manufacture.

Shelf Hardware Shows Increases

SHELF GOODS.—Effects of the firmness in the iron and steel markets has been felt further in shelf goods, as well as in the heavies this week. Bright wire goods show greater firmness. Stovepipe screw eyes are now quoted 20 per cent. off. Gate hooks and eyes also 20 per cent. off. Gate hooks and eyes were formerly quoted at 40 per cent. off list, and have been getting scarcer on the market. The 50 per cent. increase in price of the present week was not unexpected nor unpredicted by HARDWARE AND METAL.

Screw hooks, formerly 40 and 10, are now 25 off. Screw eyes, suit A. B. and C., are 20 per cent., now (formerly 40). Cornice hooks are 20 per cent. off, formerly 40 per cent. off. All wire hooks show increased prices now.

Screw and strap hinges, 14 inch and longer, are about 1c up, now $6.40 per 100 lbs. From 6 in. to 12 in., $6.60 per 100 lbs.

Globe files are now straight 65 per cent. off, and Hellers files 62½.

Copper and Other Metals Very Strong

COPPER.—Copper is found in exceedingly strong market in Montreal this week, due to the extra demand occasioned by the Allied order and to the general munition market demands, which keep on coming. Copper was quoted at from 32½c to 33c this week. The metal was in demand at those prices, and steady business in copper is being transacted, firm as the market is.

Antimony Firmer on the Market

ANTIMONY.—An increase of about 2c per lb. was noticed in antimony on the Montreal markets this week. The demand for the metal for its accustomed purposes is brisker now, and, though munition makers are not using as much

as previously, the market is strengthening up, and may be considered on the firmer trend.

Lead is Scarcer and Goes Up

LEAD.—Quoted last week at $9.50 to $9.75 per 100 lbs., lead is this week in firmer market at $9.75 to $10. There is a steady demand for the metal, and supplies are found insufficient to meet all demands on the market. Continued firmness is looked for in lead.

Solder Goes Up A Cent In Price

SOLDER.—Solder, both tinsmiths' and wiping, went up this week in Montreal. Tinsmiths' solder was quoted at 30c per lb., an increase of a cent since last week. Wiping solder at 28c shows a 2c increase. In 50-lb. boxes, commercial solder was on the market still at 29c, but strictly pure solder could not be had in small quantities much under 32½c per lb., or in 50-lb. boxes 1c cheaper—that is 31½c. The market was brisk, though firm.

Sheet Zinc is Rather Easier

ZINC.—Sheet zinc, which was in unchanging market last week, this week fell to easier price levels. The 26c to 27c per lb. of seven days ago, became 25c and 25½c. Spelter was unchanged at 16c to 16½c, and in a market not characterized by any special tendency.

Market for Tin Keeps Very Strong

TIN.—At $47.50 to $48 per 100 lbs., tin came into still stronger market in Montreal this week. Demand was brisk, and business was alive. The conditions found last week tending to firmer prices proved more lasting than had been expected, and firmness in tin may continue.

Barn Door Hangers Up In Price

In line with other manufactured fittings, barn door hangers this week show the upward trend. The Atlas hanger is quoted at increased prices: No. 0 costs $6.40; No. 1 cost $7, and No. 2, $8.20. Stearns No. 1 is quoted at $580, and 1½ at $8.05.

Farm Bells Go Up in Cost This Week

It will cost more to call the farm hands to dinner or to start work—that is, if the farmer has to buy a new bell this winter or next spring. Farm bells have gone up. Instead of $2.75, "C" x 40 lb. now costs $3; "E" x 50 lbs. is $3.60; and "A" x 75 lbs., is $4.75.

Cotton Rope and Sash Cord Go Up

Cotton rope shows a cent a pound increase in price this week, 3/16-inch being now 33c, and ¼-inch 32c. Sash cord is also up, prices per doz. bundles being: No. 3½, $1.30; No. 4, $2.10; No. 4½, $2.90; No. 5, $7.90. No. 6 is 40c per lb.; No. 7, 39c, and Nos. 8 to 12, 38½c per lb. Candle wick is also up to 34c per lb.

New List Soon for All Washing Machines

By next week it is expected that a new list will be prepared for all washing machines on the market to-day. There has been scarcity of many lines of these, and prices looked like going up for some time. The new list, according to the best opinion available, will be subject to 50 per cent. off as discount.

Wire Nails Remain Firm

All wire products remain firm and in fair demand. The increase in price expected in the United States a short time ago did not materialize. However, there are many in the trade who still expect to see $4 nails. The price at present remains at $3.85 base.

Cut Nails Advance 30c

An advance of 30c per 100 lbs. has taken place in the price of cut nails. The new price is $3.70 base.

Screen Doors and Windows Higher

New prices on screen doors for spring will be issued this week. Doors will run from 10 to 20 per cent. higher than last year, and screen windows from 15 to 20 per cent. higher.

TORONTO MARKETS

TORONTO, Oct. 20.—Business in all hardware lines has been good during the past week. Quite a number of prices have advanced, some of the more notable ones being cut nails, pressed spikes, pig iron, boiler tubes, corn huskers, files, cotton clothes line, screw eyes and screw hooks, with a general advance in the line of one large American manufacturer. Steel and iron companies have withdrawn all their price lists, which presages new and in all probability higher quotations when the new lists are issued. Brooms are soaring to new high levels owing to the doubling of the price of broom corn. In the face of high prices purchasers are optimistic and trade continues good.

THE JUDGMENT OF PARIS.
Paris: "We've decided to keep the apple for ourselves."
Germania: "Then what do I get?"
Paris: "The pip!"

Iron and Steel Due for Advance

IRON AND STEEL.—Jobbers have been notified by the manufacturers of the cancellation of all outstanding price lists on iron and steel. This is taken by the jobbers to mean that new and higher prices will shortly be issued. An advance of somewhere in the neighborhood of 15c on all lines such as common bar iron, horseshoe iron, angles, mild steel, band steel, sleigh shoe steel, reeled machinery steel, tire steel, toe calk steel, silver tool steel and spring steel, is looked for.

Pressed Spikes advance 30c

Pressed spikes have advanced 30c and are now quoted at $4.10 base, ⅝ dia. and over. There are the usual advances for the smaller sizes.

Canadian Pig Iron Up $1.50 Ton

Pig iron, ordinary foundry grade, has advanced $1.50 per ton and is quoted $25.50 ton.

Boiler Tubes Advance 3c Per ft.

An advance of 3c per ft. has taken place on lapwelded boiler tubes and quotations are now: 2 in., $20.50; 2½ in., $26.00; 3 in., $30.00; 3½ in., $35.00; 4 in., $43.00.

Ingot Metals Quieter, But Firm

A quieter tone characterizes the metal markets this week, but prices have been well maintained. The copper market is still very strong, and is in an excellent position, with quotations unchanged. Lead and spelter are quieter, but antimony is firmer on better demand. Business locally continues good, and the outlook generally is favorable.

Copper Continues Strong

The strength in copper continues undiminished, producers reporting that while the volume of business is gradually tapering off, fair orders are still being taken from domestic consumers. The Italian Government has come into the market for about one million pounds of copper. Owing to the enormous demand for copper, there is some fear of a short-

age, and higher prices may yet be recorded. Local quotations are firm and unchanged at 30c-31c lb.

Tin Firmer

The submarine scare having quickly subsided, the tin market recovered, although it is still irregular on prompt metal. The market, however, is firm and higher on futures. Tin is quoted at 47c per pound.

Spelter is Quiet

The market is dull, with little business passing. There is considerable uncertainty in the market, and the large interests are waiting until the situation clears before coming into the market. Local price is 12c per pound.

Lead Quiet and Firm

Business is quiet in the lead market, as neither buyers nor sellers are showing much inclination to do business. The Trust is maintaining the price of lead at 7c, New York. Local price, 9¼c per pound.

Antimony Unchanged

Quotations are nominal and unchanged, although the market is firmer and demand heavier. Local quotation is 18c per pound.

Aluminum Remains Steady

The market is more active, but quotations are unchanged at 68c per pound.

Screw Eyes and Screw Hooks Advance

SCREW EYES.—Advances have been recorded in a number of lines of screw eyes and screw hooks during the past week. Bright eyes are now quoted at 20 per cent. off list and stovepipe screw eyes carry the same discount. The square screw hooks are now quoted at a discount of 20 per cent. off list, while other ordinary screw hooks carry a discount of 25 per cent. under the new prices. Gate hooks and eyes are also among this class of article that share in the advance, the discount now quoted on them being 25 per cent. An advance in boot calks has also been recorded during the week.

Cut Nails Make An Advance of 20c Keg

NAILS.—As intimated for some weeks past an advance was probable in the price of nails. This week an advance of 20c per keg has been recorded in the price of cut nails, which now makes the base price $3.60 per 100-pound keg. An advance in horseshoe nails was recorded last week of 1c per pound. All other lines of nails show a firmness in the market and advances are not unexpecteed in the standard steel wire nails. Wire nails remain at $3.80 base.

New Discounts Are Quoted on Files

FILES.—A further increase has been recorded in the price of files from that recorded last week. Last week the discount was changed from 65 anl 10 per cent. to 65 and 5 per cent. on Great Western, Kearney & Foot, J. Barton Smith, McClellan, Disston, Delta, Globe and Vulcan brands. This week the discount is now placed at a straight 65 per cent. The advance in price on these brands is therefore approximately 5 per cent. The discount on the Delta brand of files has been changed to 47½ per cent. off list. Nicholson files have been increased in price from 55 per cent. off list to 50 per cent. off list. Black Diamond brand also carry a discount of 50 per cent.

Sargent Lines Have Advanced 10 Per Cent.

CORN HUSKERS.—An advance has been recorded during the past week in the Sargent line of goods that affects many articles carried by Canadian jobbers. Some of the lines affected are corn huskers, sash rollers, trap door rings, bull rings, tools and builders' hardware. The advance by the manufacturers is approximately 10 per cent. This advance is in keeping with the advancing prices in raw materials.

Cotton Rope is Very Firm in Price

COTTON ROPE.—There is a firmness in the market for cotton rope as a result of the recent big advances in the price of raw cotton. On Wednesday of this week raw cotton at New Orleans closed at 18.6c for December delivery. This is getting dangerously near the 20-cent level that has been predicted for some time past. Reports of damage to the cotton crop by reason of a hurricane that struck the South caused cotton to go up almost 1c per pond. Locally the price of cotton rope is very firm. Some of the jobbing houses advanced their prices over those of last week by about 1c per pound. There is quite a range at the present time. One-quarter inch and up is now quoted from 31c to 33½c, three-sixteenths inch from 32c to 34½c, five-thirty-seconds from 34½c to 37c and one-eighth from 35½c to 39c. There is small prospect of cheaper cotton rope in the near future.

Sash Coard and Clothes Line Up

There is also a firmness in the market for such cord and cotton clothes line as the result of the condition outlined above. There has been an advance of 2 per cent. to 5 per cent. on all lengths of cotton clothes lines during the week. Sash cord shows a range of ½c per pound in the quotations of various dealers. No. 6 is quoted at 40c and 40½c, No. 7 at 39c to 39½c and No. 8 and up at 38½ to 39c. In cotton clothes lines the following prices now prevail:

	Per Doz.
40-foot length	$1.40
48-foot length	1.70
50-foot length	1.75
60-foot length	2.10
72-foot length	2.50

The net advance is 5c per dozen, except in the case of the 48-foot length where there is a 7c advance.

Woodenware Makers Behind With Orders

WOODENWARE. — Although prices in woodenware have not advanced recently the market is steady at present quotations. Manufacturers report their factories exceptionally busy. Some state they have twice the business offered that they can take care of and that they are from two to three weeks behind with orders. Many concerns are not bothered about looking after new business but are confining their attention to taking care of the needs of their customers.

Carpet Sweepers For Christmas

The Christmas offer of 1 free sweeper with each dozen of sweepers ordered is now out. There is a good steady demand for sweepers. Prices are shown in the current quotations.

Screen Doors Will Be Higher in Price

SCREEN DOORS.—The spring booking prices on screen doors and windows have been placed in the hands of the dealers, which provides for an increase over recent quotations from 10 to 20 per cent. The advance represented is best illustrated when it is known that the cheapest grade of screen door will be sold at $11.35 per dozen as compared with the old price of $9.60 per dozen. The better class of door will average an advance of 10 per cent. over the recent selling prices, while windows will be increased from 15 to 20 per cent.

New and Higher Lists for Washing Machines

WASHING MACHINES.—It is expected the new lists on washing machines will be in shape for issuance by the latter part of this week. The former lists were withdrawn about two weeks ago. Generally higher prices are anticipated. All makes are expected to share in the advance.

Pressed spikes are among the articles in the nail line that have advanced during the week, the increase being 20c per 100 pounds. This makes the price for ⅝-inch diameter $4.10. Small railway

spikes have also shared in the advance and are quoted 25c higher per keg.

Brush Prices Are Firm and Advancing

BRUSHES.—There has been a good demand for paint brushes of all kinds in the face of a firm market, with possible advances not at all improbable. One large dealer advanced their line about the middle of last month on an average about 10 per cent. on the ordinary run of brushes, while on some of the fine grades the advance amounted to 20 and 25 per cent. There is a shortage in the supply of hogs' bristles obtainable, and this has sent a firmness into the market. Dealers are not stopping to ask prices, but are content to take them at whatever price is named. Some of the larger concerns are now ordering their spring stock. This is a little chore which in normal years is left for the latter part of January and the early part of February. But, then, things have changed. Manufacturers state higher prices will undoubtedly prevail by spring time.

LONDON MARKETS

LONDON, Oct. 19.—Another heavy budget of price changes, all in an upward direction, has been announced this week. The markets generally are very firm and still higher prices are expected on some lines.

Business is exceptionally good, and all fall lines are moving freely. There is a good demand for stoves, oil heaters, glass, roofing, nails, etc. Deliveries from the factories are still very slow. Railroads are also slow in handling freight. Collections generally are good.

Cut Nails Move Up 30c Keg

An advance of 30c keg has taken place in the price of cut nails, and the new price is $3.70 base. Wire nails remain unchanged, but are firm at $3.80 base.

A discount of 65 per cent. is quoted off the miscellaneous list. All wire products are very firm. Pressed spikes and railway spikes have advanced 20c per keg. Capewell horse nails have advanced 1c per lb. list.

Brass Goods Advance

Advances of approximately 25 per cent. have been made on brass curtain rods, curtain rings, chair nails, moulding hooks.

Leather Mitts Higher

Sheepskin mitts (one finger) have advanced to $3.25 per dozen. Imitation mule mitts are also higher, and are quoted from $3.25 to $3.75 dozen. The advance on the latter amounts to about $1 per dozen.

Hooks and Eyes Go Up 33 1-3%

Bright wire screw hooks and eyes have advanced about 33 1/3 per cent.

New discounts are as follows:—Bright screw eyes, 20 per cent.; bright stovepipe screw eyes, 20 per cent.; bright square cornice hooks, 20 per cent.; bright screw hooks, 25 per cent.; bright gate hooks and eyes, 25 per cent.

Stocks and Dies Advance

Pipe and blacksmith stocks and dies have advanced about 20 per cent.

Sheet Glue Advances Considerably

Another advance has been made in sheet glue. The advances for the last six months will average 10c per lb.

All Cotton Goods Go Higher

Sash cord, cotton rope, cotton twine and Seine twine have all gone upwards. The prices now in effect are as follows:

Sash cord—No. 6, 40c lb.; No. 7, 39c lb.; Nos. 8, 9, 10, 12, 38½c lb.

Cotton rope—3/16 in., 33c lb.; ¼ in. and larger, 32c lb.

Cotton twine—3-ply, 35c lb.; 4-ply, 38c lb.

Seine twine—No. 18 and larger, 1 lb. lines, 42c per lb.; No. 18, ¼ lb., 43c per lb.; No. 15 and smaller, 1 lb., 43c per lb.; No. 15, ¼ lb., 44c per lb.

Stanley & Sargent Goods Higher

Stanley vises, squares, hammers, levels, etc., advance again about 10 per cent. A number of Sargent's lines have also advanced 10 per cent.

Stove Pipes Higher

An advance of about 75c per 100 lengths has gone into effect on stove pipes. The new price follows:—6 in. bright, $12.75 per 100 lengths; 7 in. bright, $13.46 per 100 lengths.

Brass Spring Wire Up

Brass spring wire has advanced, and is now quoted at 17½ per cent. added to standard list. Elbows are quoted: 6 in., $1.33 doz.; 7 in., $1.50 doz.

Files Are Higher

An advance has been made in the price of files and the new discounts are:—Globe, 65 per cent.; Black Diamond, 50 per cent.; second quality, 75 per cent.

Orange Shellac Moves Upwards

An advance of 25c per gallon has gone into effect on orange shellac, and an advance of 35c per gallon on white. Quotations are now as follows:—

Pure Orange Shellac—1 gal., $2.30 per gal.; jars ½ gal., $2.40; ¼ gal., $2.50.

Pure White Shellac—1 gal., $2.55 per gal.; jars ½ gal., $2.65; ¼ gal., $2.75.

Linseed Oil Firm at High Figures

Linseed oil is still quoted at the high figures of last week. There is only a fair demand at present. Quotations are as follows:—1 to 2 bbls., raw, $1.05 per gal.; boiled, $1.08 per gal.; 3 to 5 bbls., raw, $1.04 per gal.; boiled, $1.07 per gal.; 6 to 9 bbls., raw, $1.03 per gal.; boiled, $1.06 per gal.

Turpentine has advanced 1c per gallon, and is now quoted at 72c per Imperial gallon in single barrel lots; 71c in 2 to 4-barrel lots; 79c in 5-gal. lots. There is a good demand for turps at present.

White lead in oil is very firm at $13.95 per 100 lbs. in ton lots, and $14.25 per 100 lbs. in less than ton lots.

Good Demand for Glass

There is a good movement in glass. The discounts are as follows:—Single diamond, 20 per cent.; double diamond, 20 per cent.; cut lights, 50-5 per cent. Prices open for 50 cases and over.

Putty remains unchanged at the following prices:—

Standard 100-lb. drums, $3 per 100 lbs.; standard, 25-lb. drums, $3.10 per 100 lbs.; pure, 100-lb. drums, $3.70 per 100 lbs.; pure, 25-lb. drums, $3.80 per 100 lbs.

Doors and Windows to be Higher

Booking prices for spring on screen doors and windows are now out, and show advances of from 10 to 20 per cent. over this year's quotations. The common door, which has been selling for $9.60 doz., will be sold for spring at $11.35.

Washing Machines Higher

New lists, subject to a discount of 45 per cent., have been issued by manufacturers of washing machines. Prices are all higher than those quoted prior to the withdrawal of prices, as announced by HARDWARE AND METAL two weeks ago.

WINNIPEG MARKETS

WINNIPEG, Oct. 19.—Business for the first half of the month has been very satisfactory, tho jobbers say it is rather streaked—by that meaning some districts are sending in good business while others are curtailing their purchases materially. Some difficulty is being experienced in getting threshing done owing to the shortage of labor and the highest wages

ever offered are the rule—$4.00 a day being a usual wage now. This condition of affairs will militate against big business and will also make the net profit of the farmer considerably smaller. However, high prices still rule for all grains and as prices will likely remain at a high figure—these should be quite a good deal of money throughout the country.

Higher Prices On Many Lines

Prices changes for the past week show the results of the continued advances which have been recorded in all iron and steel products, notably in the new quotations issued in the advance on Saddlery Hardware, including such lines as snaps, buckles, bridle bits and chains. Clay picks and mattocks, perfection faucets, wire rope and two or three lines of bolts have also advanced in price, the new figures being given below.

It is expected new prices for spring on woven fencing will be available shortly and it is estimated that first prices will show an advance of about 10 per cent. over previous quotations. Jobbers advise, however, that further advances are almost sure to follow and may be in evidence before the first of the year. It would seem then, that prices now to be offered will be good value when compared against likely values next April or May.

The price of hemp leathers has advanced considerably and considering the scarcity of all kinds of leather, this might almost be expected. The new prices now being made are as follows:—Crimped, 2, 90c doz.; 2½, $1.15 doz.; 3, $1.50 doz.; 3½, $1.80 doz.; 4, $2.35 doz. Valve, 2, 65c doz.; 2½, 90c doz.; 3, $1.10 doz.; 3½, $1.35 doz.; 4, $1.65 doz.

Advances on Bolts and Pump Leather

The advances in tank hemp leathers is the most noticeable, perhaps, the new price being $4.55 per doz. for the 5 in. crimped.

The change in bolts affects the following lines: stove with a new discount of 50 per cent. and tire with a new discount of 30 per cent.

New prices on elevator bolts are noted also: ¼ x ¾ being 80c; ¼ x 1 being 80c and ¼ x 1¼ being 90c per hundred.

The following memos pertaining to saddlery hardware will serve to illustrate how this line has been increased in price: Harness buckles $50 Jap'd, ⅞ in. $1.35; 1 in., $1.60 and 1¼ in. $2.20 per gross.

Trace Buckles, $1.75; 1½ in. ,$1.00 and 1¾ in $1.15 per doz.

Bridle bits 47 S. & J. $1.60 and $1.70 per doz. respectively.

Harness rings jap'd ⅞ in., 80c; 1 in. $1.00; 1¼, $1.40 and 1½ in. $1.75 per gross.

Harness snaps $2.90; ¾, ⅞ and 1, $4.40; 1¼ in., $7.50 per gross.

Roller breast snaps, 439 x 1½, $2.00 and 1¾ in. $2.20 per doz.

Spring Prices Are Much Higher

The new prices for spring now being quoted on cow ties and tie out chains are as follows: These prices also show considerable advance over last year's list.

Cow ties—discount 30 per cent. 0, $2.50 doz.; 2-0, $2.25 doz.; 3-0, $2.45; 4-0, $3.10 doz.

Tie out chains—discount 70 per cent. 0 x 30, $6.90 doz.; 40, $9.00 doz.; 50, $11.10 doz.; 2-0 x 40, $9.90 doz.; 50, $12.45 doz.

Clay picks are now being quoted as follows, 5 to 6 lbs., $6.00 doz.; 6 to 7 lbs., $6.25 doz.; 7 to 8 lbs., $6.50 doz.

Long cutter mattocks, 5 and 6 lbs. $6.75 doz.

Grub hoes, No. 1, $5.50.

Many Other Prices Are Higher

Perfection tank with iron pipe thread now show advanced prices as noted herewith: ¾, $6.60 doz.; 1, $7.70 doz.; 1¼, $9.10 doz.

Petroleum faucets, ¾, $9.35 doz;. 1, $13.20 doz.

Thumb latches, No. 2, $1.50 doz.; No. 3, $2.00 doz.

Quotations are now being made on oil and gasoline stoves for spring and in sympathy with other lines, advances are to be noted here too. Prices available now are here given:

Blue flame oil stove, 1 burner, $4.10 each; 2 burner, $4.80 each; 3 burner, $6.25 each.

Gasoline stoves, 1 burner, $3.00 each; 2 burner, $3.50 each; 3 burner, $3.50 each.

The following are the new prices on wire rope per 100 feet:—¼ in., $9.50; 5-16 in., $10.00; ⅜ in., $11.50; 7-16 in., $11.50; ½ in., $12.25; 9-16 in., $14.00; ⅝ in., $16.00; ¾ in., $20.00; ⅞ in., $28.00; 1 in., $36.00.

Cut lengths 10 per cent. advance on above.

The Fighting McAvitys

T. McAvity & Sons, Ltd., St. John, N.B., have issued in an attractive pamphlet form a roll of honor, giving the names of members of the firm and employes who have enlisted for active service. Five members of the firm have enlisted, together with 75 employees, making a total of 80 in all..

Trade Inquiries

The Department of Trade and Commerce has received the following inquiries relating to Canadian trade. Addresses may be secured from the Department, or from the Editor, Hardware and Metal, Toronto, Canada. Please quote reference number when requesting addresses.

1244. **Steel baling hoops.**—Quotations desired by Dundee firm for mild steel baling hoops ⅝ inch by 24 W.G. in coils of about 56 pounds f.o.b. Birkenhead or c.i.f. Calcutta. The quality must be first-class. Also mild steel baling hoops 1 inch by 16 W.G. and 1 inch by 17 W.G. in long lengths, coiled and black varnished, c.i.f. Glasgow.

1245. **Steel bars, plates, sections, billets, etc.**—A Dundee firm will be pleased to enter into correspondence with reliable iron and steel manufacturers in Canada with a view of obtaining quotations for the above.

1246. **Methylated spirit irons.** — A Dundee firm would be pleased to receive quotations from Canadian manufacturers of methylated spirit irons.

1247. **Wire nails and pins.**—A Dundee firm wishes to receive quotations f.o.b. quay, Dundee or Leith, for three tons of pins 2⅛ inches long, No. 4 W.G., packed in 1-cwt. bags. Sample is in the possession of the Department of Trade and Commerce, Ottawa. Also for wire nails.

1249. **London agent.**—An English commercial traveller is open to communicate with a Canadian house requiring a personal representative or agent in London.

1253. **Files and rasps.**—A Sheffield firm are in the market for Canadian-made files and rasps.

1254. **Linseed cake.**—A London firm wishes to get into touch with firms in Canada manufacturing linseed cake.

1266. **Commission agent.**—An active Belgian commission agent established in Cairo, Egypt, who has been interested for the past two years in the sale among others of the following articles: Rails and fish-joints for normal gauge roads; rails and fish-joints for portable railways (Decauville system or any similar); bolts for both normal and narrow gauge (portable); railways; iron railway ties; railway awnings; has just returned from the front to take up again the management of his firm, and finding it impossible to import the above articles from Belgium and France under the present circumstances, wishes to find out whether he could procure them in Canada.

1268. **Agency.**—A Cape Town manufacturers' agent with permanent sample rooms in Cape Town and Johannesburg, is prepared to take up Canadian agencies for furniture in the K.D.S., picture mouldings, hardware and kindred lines. Full particulars requested in first communication.

1280. **Bee appliances.**—A South African firm with an organization calling on the farmers in all parts of South Africa, are prepared to correspond with Canadian manufacturers of bee appliances.

1281. **Fertilizers.**—A South African firm organized in every agricultural district of South Africa, requests correspondence from Canadian manufacturers of fertilizers . The line to be handled as an agency.

1282. **Architectural agency.**—A Johannesburg firm making a specialty of public building supplies are prepared to take up representation and request correspondence, enclosing samples, catalogues and other details on such lines as iron and steel casements, elevator doors, roofings, doors and frames, closet seats, blackboards, church and school furniture.

1283. **Commission house agency.**—A Johannesburg firm with good experience are prepared to take up South African representation for Canadian commission house which is prepared and organized to compete in the South African markets.

How Canadians Are Handicapped

Canada's Huge Fire Loss and Its Effect Upon Production and Competition for Foreign Trade—A Serious Problem

The fire loss of Canada has reached enormous proportions. The drain upon her financial resources constitutes an economic loss which no country can afford and still meet competing nations on an equal footing.

The war has had far-reaching effects upon commerce. European countries, in greater or less degree, are realizing their latent powers, production is being speeded up, resources are being developed, trade openings are being sought and established. Prior to the war Canada found herself handicapped in any scheme of trade expansion by the lower cost of production in Europe. It therefore follows that , with the realization by European countries of their commercial possibilities, this trade handicap will be greatly accentuated.

On the basis of averages, and from the data available as to the cost of insurance and upkeep of fire departments, the following comparisons may be deduced:—

For the past three years the average rate for fire insurance in Canada has been $1.19 per $100 of insurance. The average rate in Sweden is .40, in Austria .30, in England .23, in Germany .22, in France .21, in Spain .19, and in Italy .19.

A Canadian employer of labor with 100 employees, carrying an insurance of $50,000 on plant and buildings, and, assuming that $2,000 insurance is carried or paid for by each employee on furniture and dwelling—or a total of $250,000—would, on the foregoing basis, have to provide in wages and overhead charges $2,950. His competitor in Sweden would only require $1,000, in Austria $750, in England $575, in Germany $550, in France $525, in Spain and Italy $475.

For upkeep of fire departments Canada is heavily taxed in comparison with competing countries. In 1914, Paris, France, with a population of 2,846,986, had a total fire department expenditure of approximately $656,479, or 23 cents per head. Toronto, for the same year, with a population og 470,144, spent $675.146 on her fire department, equal to $1.43 per head.

The Toronto manufacturer—and this is only an example for all Canada—has to provide for himself and family and for each employee and his family $1.43 to cover fire department costs, as against the 23 cents his Paris competitor must provide; or, with an average of five to a family, for his 100 employees, he would have to pay in salaries and wages $722.15 as against $116.15 by his European competitor.

For insurance and upkeep of fire department the Toronto employer of 100 hands, as representative of Canadian industry, must pay $3,672 against $641 in Paris, a handicap equal to $30 per employee.

The census report of 1911 gives 515,203 as the number of employees engaged in manufacturing in Canada; consequently at $30 per head, there is a handicap of $15,456,090 against Canadian manufacturers in the cost of fire insurance and municipal fire departments.

The salaries and wages paid to these 515,203 employees amounted to $241,008,416, an average of $467.80, or approximately $9 per week. The foregoing handicap of $30 per employee represents the wages of 3.3 weeks of each employee.

In 1910 the products of Canadian manufacturers were valued at $1,165,975,639. This charge for insurance and municipal fire protection therefore represents an added tax of 1.3 per cent. upon Canada's entire output of manufactures.

The fact that much the larger portion of this amount is buried in the pay-roll can be accepted as the reason why our employers have given so little attention to the question. The charge must be met, however, whether by direct or indirect means.

Employers complain of the rising cost of manufacturing; employees complain of the rising cost of living and demand increased wages. In view of the foregoing, employers should seriously consider reduction of the burden imposed by the enormous destruction of our created resources by fire — that their earnings may not be reduced by these charges, and thus remove one of our heavy handicaps before Canadian employers and employees meet world competition under the new trade conditions which will develop after the war.

APPRAISERS' BULLETIN NO. 1346

Change in Discounts on Sewer Pipe

A bulletin has been issued by the Department of Customs, Ottawa, announcing the cancellation of the Order-in-Council of March, 1916, which fixed the discounts on sewer pipe and flue lining imported from the United States. Dating from Aug. 31, 1916, a new rate of discount becomes effective. Appraisers' bulletin No. 1280 is cancelled and No. 1346 is substituted therefor. Those interested can secure the new bulletin from the department by making application for same.

EVER-READY DRIVE—CLASS NO. 7

The big Ever-Ready drive which is now on, includes a feature that should appeal to dealers and the public alike. Three thousand dollars are offered for a new word. This prose word hinges on Ever Ready's desire to secure a term to take the place of "Flashlight." The manufacturers affirm that EVER-READY has outgrown its sub-title, that "flashlight" does not express its utility or its stability. So all they ask of the public in return for the three thousand dollars, is a name, or word, or term, that will be equal to the occasion and so effective that they will permanently adopt it. Added to this are $4,000 in prizes for window displays, and stories on "How I sold an Ever-Ready."

CANADIAN TRADE INDEX

A new edition of the Canadian Trade Index has recently been issued by the Canadian Manufacturers' Association. The editors of the new edition have striven to make it one fully representative of Canadian industrial life and in this direction have achieved a very considerable measure of success. The new "Trade Index" is made particularly interesting by a number of new features and hundreds of new names. The number represents a large amount of hard work and should be found valuable by many Canadian firms.

BINDER TWINE SITUATION

(From Cordage Trade Journal, New York.)

Reports from the West are to the effect that the International Harvester Company has withdrawn its prices on binder twine, with the exception that it is permitting its agents to accept twine orders for the corn harvest at the prices which have previously prevailed. It is now apparent that, unless something entirely unexpected happens to prevent it, prices for binder twine will be higher for the 1917 harvests than they have been for the 1916 crops, and the prisons in the West, which make binder twine, are putting out statements designed to prepare the farmers for a higher level of prices. Just how high these prices are to be remains for the future to determine. Manufacturers have bought considerable quantities of Manila, Maguey, New Zealand and Java Sisal, and other fibres with the intention of using them to eke out the scanty supply of Mexican Sisal that is now visible. All of these purchases have been made at comparatively high prices. Recently the twine manufacturers have shown no disposition to buy Mexican Sisal at the prevailing quotations. One of the largest producers has not now a single bale of Mexican Steel bought for future delivery. Whether present fibre price levels will be maintained, whether lower prices will prevail at any time in the next six months, or whether higher prices will be established are questions that now confront twine manufacturers, and upon the solution of the problem as to the level of binder twine prices for 1917. Fall plowing has proceeded under rather more favorable conditions during the last two weeks, and the planting of wheat has made good progress.

EVENTS IN THE TRADE

Business Changes

Manitou, Man.—R. L. Gillerlain, hardware, has sold out to C. G. Armstrong.

Hanover, Ont.—Young & Cross, hardware, have sold out to H. Cross & Sons.

Avonlea, Sask.—Monson Hardware Co. has been succeeded by Avonlea Hardware Co.

Markench, Sask.—F. Moscovitch, hardware and grocery stock has been sold to N. Hechter.

New Brunswick, N.B.—Clark & Johnson, hardware, have dissolved and the business has been closed.

Personals

Henry Gibson, formerly in the employ of T. McAvity & Sons, Ltd., St. John, is in an English hospital suffering from shrapnel wounds received at the front.

Will H. Baltzell has been appointed chief engineer of the Canadian Steel Corporation, Ltd., with offices at Ojibway, Ont. This is the Canadian branch of the United States Steel Corporation.

M. E. Agar, wholesale dealer in carriage hardware, St. John, is mentioned as the probable successor of the late Hon. John Costigan, in the New Brunswick representation in the Dominion Senate.

W. P. Kellett, of the Dominion Steel Products Co., of Brantford, Ont., formerly engineer for the Grand Valley and L. E. & N. Railway, has been appointed to the board who are to make a valuation of Canadian Railways.

Captain Gordon McR. Johnston, secretary of the Maritime Nail Co., Ltd., St. John, who has been overseas for the last fifteen months with the 26th N. B. Battalion, has returned to Canada. Before leaving the front he had been acting as bombing officer for the 5th Brigade, and it is understood that he has been recalled to fill an important new position, that of bombing officer for the Dominion.

Fire Losses

Elk Lake, Ont.—Fire destroyed the Elk Lake Hardware and Assan's Hardware store.

Incorporation and Licenses

The Tillsonburg Foundry & Machine Co., Ltd., capitalized at $25,000, head office, Tillsonburg, Ont., to carry on the business of foundrymen, ironmongers, manufacturers, etc.

The Exolon Co., of Thorold, Ont., makers of abrasive materials, have been granted a supplementary license to carry on business in the Province of Ontario with a capital not to exceed $275,000.

The White Co. has been incorporated at Ottawa with a capital of $40,000 to manufacture motor cars and trucks, with head office at Toronto.

The James McKay Co., of Pittsburg, Pa., manufacturers of chains and forgings have been granted a license to do business in the Province of Ontario with a capital not to exceed $40,000.

The Tillsonburg Foundry & Machine Co. have been incorporated at Toronto, with a capital of $25,000 to carry on business as foundrymen, machinists, etc., at Tillsonburg, Ont.

Pressed Metals, Ltd., has been incorporated at Ottawa with a capital of $60,000 to carry on business engineers, foundrymen and machinists, etc., with head office at Toronto.

The Boss Lock Nut Co. have recently been incorporated in Canada to manufacture lock nuts for railway, constructional and industrial use. T. W. Coleman, formerly manager of the Grip Nut Co., is now manager of the new concern with offices at 901 Eastern Townships Bank Bldg., Montreal.

Industrial Notes

Montreal, Que.—The Thomas Davidson Mfg. Co. will build an extension to their factory here.

Kitchener, Ont.—The Berlin Rubber Mfg. Co. have changed the name of the concern to that of the Kitchener Rubber Mfg. Co.

Toronto, Ont.—A building permit has been issued to the Canada Metal Co. for the construction of a factory extension on Fraser avenue, to cost $20,000. Work on the foundation has already started.

Windsor, Ont.—The Canadian Fairbanks-Morse Co. have opened a branch sales office here in order to take care of their business in Western Ontario. J. N. Charles will be in charge of the office.

Hamilton, Ont.—The Hamilton Steel Wheel Co. has purchased a site, and will erect a plant, costing $200,000, for making steel wheels. This industry, it is said, will give employment to about two hundred men.

Guelph, Ont. — Arrangements have been made whereby the Dominion Fibre Co., of Doon, Ont., whose premises there were burned out about two months ago, will locate in Guelph, taking over the old Grundy stove foundry.

Port Hope, Ont.—The town carried the Port Hope Sanitary Mfg. Co. by-law on October 10 by a vote of 343 for and 8 against. The by-law provides exemption of taxes. The company will pay the town $650 rent per year for the land.

Toronto, Ont.—The aeroplane factory to be established in Toronto, will cost, it is reported, approximately a million dollars, and will be equipped to turn out six machines per week. The machines will be purchased by the Imperial Government.

Steveston, B.C.—The rolling mills in the old Dominion Safe Works at Bridgeport, which were burned to the ground about a month ago, have been opened again in a temporary way, but arrangements are under way for the re-building of the structure.

Amherstburg, Ont. — A Canadian branch of the Solvay Process Co. of Syracuse, N.Y., is about to be established at Amherstburg. The plant, it is said, will be erected near the Limestone quarries, Anderson township, to supply all Canadian territory in soda ash.

MORE CANADIAN MUNITION ORDERS

Munition orders placed in Canada since the outbreak of the war amount to $550,000,000. An order for munitions to the value of $60,000,000 has just been received and contracts to that amount are to be placed. Since the first of the year orders have been placed amounting in value to $185,000,000.

These figures have been made public by the Imperial Munitions Board. During the months of July and August the output from Canadian industries was interrupted by reason of the difficulty experienced in procuring the necessary steel and forgings. The board is now pleased to state that, due to the efforts put forth by manufacturers, the output on most contracts is more satisfactory and increasing in volume each week.

The quantity of shrapnel shells now produced each week, complete with cartridge cases, fuses, primers and propellant charge, has reached almost 250,000, and the board has been authorized within the past week to place continua-

tion orders for this size of shell into 1917. Large orders were placed during last Spring and Summer on the larger sizes of shells, especially 8 in. and 9.2 in. This involved complete new installation of machinery and equipment. Many of these plants have now commenced operating, and the output of larger-sized shells is increasing each week, and will continue to increase until about January 1, when the maximum output of the plants should be reached. The position in Canada in regard to steel, the basis of all munition work, is now such that no interruptions in output will likely take place, as the immense tonnage required for all classes of shells has been arranged well ahead.

WHY BUSINESS MEN FAIL

(Continued from page 35.)

esting points is this: "Ability to handle men. Initiative. Familiarity with my system of records and my desires as regards correspondence. Congenial — and as much interested in the work as I; well balanced disposition; being able to handle everything with a view to the best results, regardless of personalities or obstructions."

Such laudable qualities as reliability, persistency, thoroughness, accuracy and resourcefulness naturally appeared in the course of the investigation time and again as reasons for promotion. The special abilities of business letter writing, mechanical knowledge, and selling also had weight. Laboratory ratings of a man's abilities were suggested by several as a basis for promotion.

How hundreds of business men believe these qualities can be developed is reflected in the answers to the third and fourth questions asked by System. In the suggestions these men would give their own sons are included many valuable points for the chief who has young men to hire and develop into positions as managers.

The first big fact that stands out boldly as a result of the investigation is that business men do believe in college education. Probably half of the replies emphasize this. Several men have plans for giving the boys some business experience between high school and college or technical school, or between years in college. "Then he will know what he is looking for when he goes back," said one. Several specified that he must pay part of his school expenses —an employment manager puts great emphasis on this suggestion.

Qualities You Would Want Your Son to Acquire

Insistence on a man beginning at the bottom is almost universal with these men, but many bring out the idea that instead of staying long in one job, the fellow who intends to be an executive should get the big outlines of the work and move on as rapidly as he goes through this training is brought out by such answers as these:—

(1) Teach him to take orders.

(2) Make him do his own thinking—then coach him in handling men and business problems.

(3) Give him suggestions for study as he works up.

(4) Have him mix with business men for poise and self-control.

(5) Teach him to save.

(6) Give him access to all correspondence and place his desk where he can overhear business conversations.

(7) Try to place him with a real merchant.

(8) After college—all the responsibility he can stand and back him up to the limit.

(9) Give him enough business experience to find out for what he is fitted and then let him specialize.

(10) Give him courses in personal efficiency, system and physical culture.

(11) Limit his reading and make that thorough.

(12) Have him go on the road to get other men's viewpoints.

Attention to business reading is prescribed often by those who answered System's questionnaire. Trade papers, magazines, biographies of characters worth emulation, the principles of scientific management, business law and experiences of successful men are mentioned.

Unconsciously, in these programmes, seasoned men are trying to remedy the handicaps they have felt most severely. Especially is this true of these four expressions:—

"I should try to get him to like the business, to take pleasure in his work, not to make a mechanical thing of himself, but to look on business as a game."

"I should put him in business at the lowest point of a business depression and have him eliminate all superfluous 'overhead.'"

"I should teach him to know both how and why—to learn what employees think and why every employee does or does not do his best."

"Seldom," concludes a Texas business man, "is a man educated except by a great variety of experience with a multitude—and these people should be almost any other than the folks of his own community."

Straightening a mental kink is different from "bringing out" a young worker, just as straightening a bent bone is different from making it grow true in the beginning.

Business men are rather modest about this fourth question asked by *System*—the one about their own faults and ways to correct them. But most of the fifty-odd answers that came in are shrewd and sincere.

Quick temper, tendency to work without planning, "detail," and diffidence led the list—a fact which suggests that not many got down to fundamentals.

Four men tell how they have coached themselves in self-control by stopping and trying to get the other man's viewpoint in a judicial way. One man puts irritating cases over "till to-morrow" whenever possible.

A manager who was losing time with his salesmen has cultivated a manner to hint that the matter has been thrashed out and should be dropped. A dozen men who have been working haphazard have gone to the other extreme and planned even trivial details for a time, so as to fix the habit of order.

To train himself in system, a teacher analyzed his day, sketched a graphic schedule for the week, concentrated his miscellaneous duties in the odd bits of time and then arranged outside duties to prevent him from concentrating too closely, missing his exercise and becoming a recluse. Similarly three men got relief from business worries by schedules that assured them of free time. "I have also learned not to take my business too seriously," adds one.

Too much detail—spending time recklessly because over-conscientious and distrustful of their judgment—rendered a number of these men inefficient. "By practice," one of them says, "I have learned to work smoothly, quietly and with minimum strain." Another quotes the proverb: "Drive one nail out by driving another in." An executive who was "spreading out too thin" split his work into high and low priced tasks. It looked foolish then not to hire subordinates for the cheap work.

Memory is a faculty which several who sent information to System have developed by well-known psychological rules. Getting "rattled" in emergencies has brought its cure through being "painfully deliberate." Both overwork and the tendency to be easy-going have yielded to schedules. A willingness to commit oneself too easily gave way when the man learned to let the other fellow do the talking.

One manager was truthful enough to admit the difficult habit of self-conceit He overcame it by cultivating "esteem for other men's opinions and displaying an interest in the welfare of others, without asking personal questions."

The large number of men who have felt themselves handicapped by diffidence or inability to meet and handle men is of interest. Several trained themselves to greet every customer at the shop door in a jovial, enthusiastic way, until self-consciousness and the blues were crowded out. Going to social affairs and studying ways to "sell oneself" helped two others.

PRACTICAL SHEET-METAL WORK

THREE PIECE ELBOW WITH GUSSET OR GORE PIECE.

BY THOMAS STANFIELD

WHILE it must be admitted that many articles that are shown and patterns for which are described in almost all sheet metal courses, can be bought cheaper from the factory, it is nevertheless very essential that almost every conceivable article and its manner of making should receive some attention. The writer well remembers a certain sheet metal worker who was first class at pattern developing, though only very ordinary at real manual work, and eventually became die designer for a large factory turning out all manner of stamped articles, thus showing how essential it is to know how a thing can be made up by hand, even though the article can be "bought at the factory cheaper."

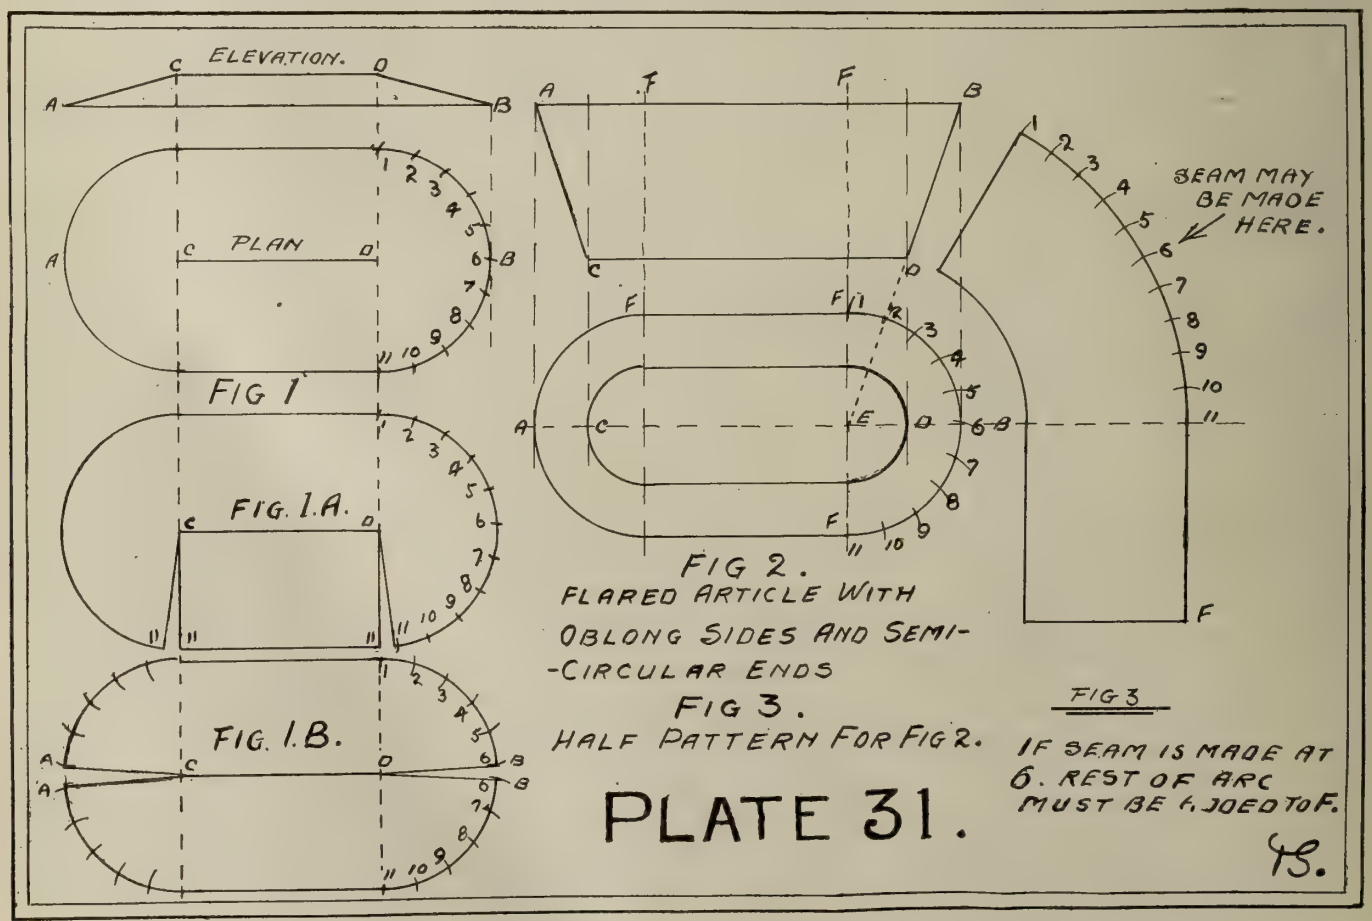

Plate 31 shows two articles, Fig. 1 and Fig. 2. Fig. 1 is a flared cover for a washing boiler; it is simply made and two methods are here given for making the seams.

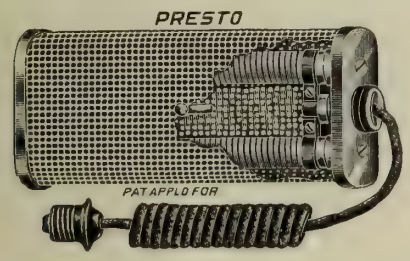
Let A, B, C, D, in elevation, be the desired cover. Draw plan as shown from the elevation and divide the ends A and B into equal parts, 1, 2, 3, 4, etc. Next, with AC in elevation as radius and CD in Fig. 1A as centres, draw two semi-circles. Divide these off, using the measurements from plan, 1, 2, 3, 4, 5, 6, B, etc., until 11 is reached, which will show a slight shortage at 11. 11. This will give one method of making the pattern. Fig. 1 B shows how this cover can either be made in two pieces, or seamed at BB, AA. No allowance has been made for seams.

Fig. 2 shows elevation and plan of a flared boiler, with semi-circular ends. A B C D is elevation, from which the plan should be drawn. Having determined how much slope and depth is required, extend the sides AB and BD, as shown.

Now, with E as centre and E and D. respectively, as radii, draw two arcs. and divide them off, using the same measurements as used in plan 1, 2, 3, 4, etc., to 11. From 11 to F in Fig. 3, is shown the straight or flat side piece. If, however, the seam is made at point 6 in Fig. 3, the rest of the measurements from 1 to 6 must be added to that portion of pattern at F. This would make the seam come on ends directly opposite to each other. Very often these kind of articles are made with four seams, for two reasons. First, that smaller sheets of material can be used; second, if the locked seams are well made, they strengthen the sides considerably.

(Continued in next issue).



NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

PRESTO ELECTRIC HEATER

On page 43 of the Sept. 30 issue of HARDWARE AND METAL, a cut of the Presto Electric Heater was shown, accompanied by reading matter which referred to another make of heater. The cut had been inserted in error. The same cut is shown herewith, accompanied by the correct description.

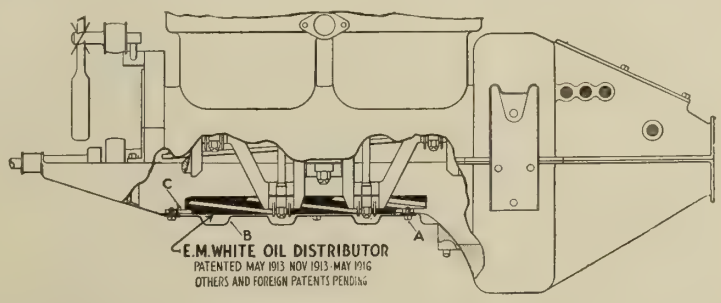
The Presto, it is claimed, is built up in oval shape, with twin heating elements extending the full length of the heater, about 6½ inches. The construction throughout is absolutely fireproof and practically indestructible. It is 3½

in. wide by 1½ in. thick, covered with heavy perforated metal, black-japanned to prevent it from rusting, with nickel-plated ends. Ten feet of asbestos covered lamp cord is furnished with each heater, with regular screw plug attached to fit all ordinary house or garage lighting sockets.

The makers further state that all the user has to do is to screw the plug into the nearest light socket, put the heater under the hood, close to the engine or radiator, and go to bed assured of the fact that when he goes to the garage in the morning he will find the engine warm and starting a pleasure. It gives a strong uniform heat, and as the resistance cannot vary on account of the length of wire in the heater remaining uniform, the heating element never becomes hot enough to ignite any gases, oil or grease.

A VERSATILE BURNER

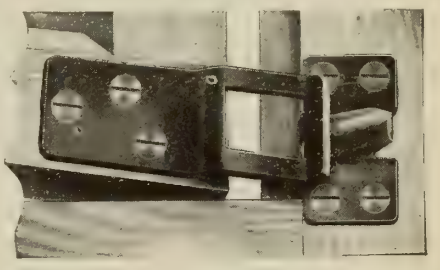
Signalizing its establishment in a new plant where Vapor stoves will be assembled on a conveyor belt, the Detroit Vapor Stove Company, Detroit, Mich., is offering to the trade a burner which uses oil or gasoline—either one, alternately, or, for that matter, in rotation with distillate in territories where the cost of gasoline mounts to fanciful figures.



This achievement is the adaptation of the heavy annealed iron burner with its fuel economy and intense heat to either oil, gasoline, or distillate, indiscriminately.

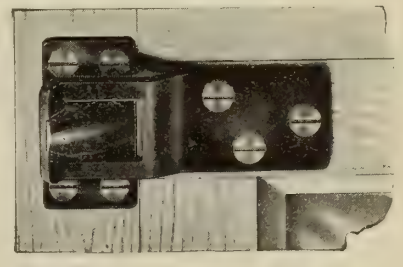
The makers state that one effect of this is to reduce the number of stoves necessary for a complete stock, as any Detroit Vapor hot plate, room heater, water heater, or big cooking range can be delivered at once to a home that intends to use any of the three fluid fuels.

The convenience of delivering an oil, a gasoline, or a distillate stove from a single unit of stock is, according to Alvin Sherman, assistant general manager of the company, so practical that it is opening new channels of trade daily.



WHITE'S OIL DISTRIBUTOR

The Evapco Manufacturing Company, 427 Grand River Avenue, Detroit, Mich., has brought out a new Ford accessory, called White's Distributor. The White's Oil Distributor consists of a series of troughs made of stell combined to form a single unit and placed inside the crank case, on the right hand side. The oil splashed from the small pockets by the cranks is caught and carried by the trough rearwardly step by step to the main reservoir or fly-wheel housing. This movement of oil rearwardly prevents the accumulation of lubricating oil under the cranks especially number one crank, and insures proper lubrication of the motor whether the car be ascending or descending a grade, thus overcoming, it is said, ninety per cent. of the lubrication difficulties of the Ford motor.



PEERLESS STORM SASH HANGER

This Peerless Storm Sash Hanger has recently been added to the line of storm sash hardware manufactured by the Stanely Works, New Britain, Conn. The No. 1715 hanger is heavy and strong.

The angle on the hook and on the head of the eye guides the eye up and over the hook, so that a sash or screen can be hung easily and quickly from the inside of the building. It is necessary only to set the storm sash in its proper groove in the casing and, using this groove as a guide, to push the sash up. The eyes slide right over and on to the hook; the weight of the sash clamps down the eyes into place.

Sashes being hung or removed need not be held far from the building, consequently there is no danger in hanging or removing them from the inside of a window equipped with No. 1715.

Packed with ¾ x 7 screws. One pair of hooks and eyes to a set; one dozen sets in a box. Gross weight, per dozen sets, 3.35 lbs. Five gross sets in a case. Furnished in Japanned, 1715-J; and Stanley Sherardized, 1715-Z.

WEEKLY PAINT DEPARTMENT

Fall Is the Best Time to Paint

Not Only the Best Time to Paint, But to Sell Paint—Various Forms of Publicity Can be Used—Make the Mails Work for You.

By Thos. E. Hunt.

MANY authorities express the view that the Fall is the best time to paint. During the summer months surfaces which should be painted have an opportunity of becoming dry and in splendid condition for receiving an application of paint.

There is no other period of the year when the property owner should think of painting, particularly all outside surfaces, than during the Fall. The coming siege of winter weather will play havoc with all unprotected surfaces. The cost of paint protection is very small when the benefits to be derived are taken into consideration.

The weather during the Spring of the present year, in most parts of Canada, was very unfavorable toward painting. Damp, wet weather prevailed for many weeks, and property owners who had contemplated painting, no doubt postponed it. They should be mighty good prospects at the present time.

Price Should Not Stop Work

It has been said by a few merchants that the high cost of paints will prevent many people from painting this Fall. It is doubtful if this objection will be raised in many cases. If it should be, there are many arguments a merchant could use to offset an objection of this kind. A difference of from $5 to $10 on a job of painting should not deter the property owners from painting. The unprotected property would depreciate in value to a much greater extent than the extra cost of the paint.

Then there is the matter of appearance. A well painted building or home will always attract more attention, command a better price, and improve the appearance of other surroundings. Well painted buildings help to create better neighborhoods and enhance property values.

There is also the question of health to be considered. Better health conditions are always found in a district or community where paint is freely used. This is true regarding both the outside and inside of the home. Better to have all pores, cracks and crevices filled up with a good paint than to harbor germs which at any time are liable to cause sickness and death.

The retailer who energetically pushes the sale of paint, not only helps to improve the homes and buildings of the surrounding country, but he incidentally increases his profits a very necessary objective in these days of keen competition.

Demand for Indoor Finishes

With the approach of Winter there is always a good brisk demand for indoor finishes to be used in preparing the home interior for the coming Winter months. During the cold weather a great deal of time is spent indoors. It is important, therefore to have the home interior as attractive, healthful, and homelike as possible. The sale of indoor paint materials could be considerably increased if better salesmanship were employed by the average retailer or salesman.

Just because a customer comes in and asks for a can of stove pipe enamel or screen enamel, doesn't mean that he is interested in those products only. Why not make inquiries to see if he does not require floor varnish or paint, wall paint, bath enamel, varnish stain, or any one of the many interior finishes which are carried in every hardware store. Tell the customer about other lines he could use in his home—the chances are he doesn't know of the many lines of specialties which are now available for the amateur painter. To many people "paint is just paint." They have not heard of many of the inexpensive and practical finishes which are now available and can be applied in spare time at home.

How to Aid Sales

There are many ways by which sales can be stimulated during the Fall. Window displays, of course, are of the old stand-bys. They are used extensively and profitably by many merchants, and neglected by others. They are the most valuable part of your store and this should be borne in mind when you are arranging Fall paint window displays.

Make the Mail Work for You

When you are sending out letters, bills, or invoices, include literature featuring some paint material or service you have to sell. Postage will not cost any more. Returns will pay you. Customers will not resent receiving advertising matter this way. Many successful firms always enclose advertising matter along with accounts. They believe it creates a much better feeling toward the firm than when a mere statement of account is sent out.

Newspaper advertising is also effective. The merchants are few indeed, who do not believe that advertising is a great business pulling force. The trouble with most of them is that they do not use enough printers' ink, and when they do use it they do not devote sufficient time or thought to the preparation of advertising copy. An excellent article on this subject appeared on pages 24 and 25 of the Sept. 30 issue of HARDWARE AND METAL. Every advertiser, whether he be a manufacturer, wholesaler, or retailer, should look up his copy of the Sept. 30 issue and if he has not already done so, he should study carefully the many excellent suggestions given in the article.

Then there are the movies. They are now being used for publicity purposes by many retail firms.

The distribution of circulars and other printed matter from house to house is a method that has been tried out with success by some retailers. The success or failure of this method depends largely on the pulling power of the literature distributed and on the thoroughness with which it is distributed.

Interior displays can also be used effectively in pushing the sale of paints during the Fall. Counters, silent salesmen, wall spaces, display stands will be found useful for holding displays which will appeal to customers who enter the store. Partly painted articles placed at strategic points in the store will attract favorable attention. A partly painted stove pipe, piece of linoleum, chair, or flooring, will impress upon customers the importance and necessity of using paints, not to speak of its beautifying effects.

Good Sale for Brushes

Along with the demand for paint there is a good demand for brushes. It always pays to push the sale of good brushes. The customer will secure better satisfaction, both from the brush and the paint with which it is used.

We Put Ourselves in Your Customer's Place

We have made a close study of the painter's and consumer's desires in the way of paint, and we have prepared a product to satisfy those desires.

Jamieson's Pure Prepared Paints and Varnishes

are a mighty good line to sell. The profit is ideal and satisfaction positive.

Secure the agency and you'll start on the road to a larger turnover.

Write for full details.

New Glass To Be High

New Glass Manufacturing Year Starts This Month — New Prices to be Higher, But Low Considering Present Conditions.

ANOTHER year of window-glass making will commence in the United States about the end of the present month, when all hand-operated plants and a number of machine factories will resume operations after a period of five months' idleness. The trade naturally wonder what will happen to glass prices. The window glass situation in the United States summer up by the Johnson Brokerage Co. at the beginning of the month, is as follows:—

"The production of window glass during the past manufacturing year was the greatest in the history of the business and to-day stocks in manufacturer's hands are smaller than ever before, while jobber's stocks are barely normal, if that. With all stocks completely exhausted the outlook for a prosperous year is excellent and all those who are affiliated with the industry have reasons to feel secure in the belief that another satisfactory and profitable year is ahead of them.

Those engaged in glass making may not have acquired any new methods in conducting their business in recent years, but it must be admitted that they have made far better use of such commercial knowledge as they possessed than ever before. By the application of common sense methods to their practical experience in making glass they have obtained excellent results for their labor and investment and it is only fair to believe these same methods will continue along improved lines. The cost of manufacturing in nearly every line has increased and glass making shows no exception. Everything entering into the product is higher. This embraces labor, both skilled and unskilled, fuel and all materials entering in to the product. These advances range from 15 to 50 per cent. Selling prices are higher, this being necessary to care for the increased outlay.

Those who have purchased glass during recent years have noticed a gradual improvement in business and the small annual increase in costs and selling prices without alarm, but with growing confidence in the general business situation and while little speculation has entered in the transactions, these purchases have shown continued profitable results and have enabled distributors to show a reasonable profit they are entitled to. To review the business of the past four or five years it must be admitted that it has been most satisfactory to manufacturers, distributors, and workers and to-day it is the cheapest commodity of its kind entering into building construction. We think it is proper to recall some of these facts at a time when preparations are under way for the commencement of a new year as it should be reassuring to those who devote their time, energy and capital in making and selling this important article. New glass will be higher, but all conditions considered, it will be cheaper than have been your purchases during the past year or more. When they understand that this letter refers to a product that has undergone but little change in the past years, it is interesting. No new styles or models are offered, but a dependable article better assorted perhaps and packed in many cases more carefully, but generally speaking unchanged."

WEEKLY PAINT MARKET

(Continued from page 52.)

local demand for this commodity. Prices quoted are as follows:

	Raw.	Boiled.
1-3 bbls.	$1.01½-1.08	$1.04-1.10½
3-5 bbls.	1.00½-1.07	1.03-1.09½
6-9 bbls.	99½-1.06	1.02-1.08½

Turpentine Still Shows Big Spread

TURPENTINE.—There continues to be a wide spread in prices quoted on turpentine in the local market. In some quarters the price was firmer by 1c per gallon, and was quoted at 72c, whereas in one case the lowest quotation of last week still maintained at 65½c per gallon in single barrel lots. The situation in the primary market in the Southern United States has been in a slightly fluctuating condition. The market has moved upward and downward within narrow margins within the past week or ten days. On Monday of last week turpentine was quoted in Savannah at 43¾c per wine gallon. On Tuesday of the same week it advanced a ¼c to 44c; while the following day it went to 44¼c, and on Thursday it reached 44½c, where it remained throughout Friday. On Saturday the market was quiet and dropped back to 44c. On Monday of this week it declined to 43¾c, and held at that level throughout Tuesday. On Wednesday it advanced again to 44c, where the market was reported firm. One concern quotes at 65½c in single-barrel lots; two others are quoting at 67c. The majority are quoting 72c per Imperial gallon.

White Lead in Oil Holds Steady and Firm

WHITE LEAD.—There has been no change recorded in the price of white lead in oil during the week, but prices have held steady to firm, with advances not improbable in the near future. A restraining factor operating to keep prices at the present level are the present high quotations. Dealers assert conditions in the pig lead market warrant an advance over present prices. Consumption at present is not heavy, and this is also a restraining factor against an advance. In ton lots it is quoted at $13.95, and in small lots at $14.25 per 100 pounds.

Shellac Prices Are Holding Very Firm

SHELLAC.—There is a firmness in the shellac market, with recent advances recorded in certain quarters. In single gallon cans pure white shellac is quoted at $2.55 and the orange at $2.30. This represents an advance of 35c over the price of ten days ago. In barrel lots, white is quoted at $2.40. Some dealers have considerable stocks on hand, and this is stated to be a steadying factor operating to restrain a more general advance.

Gasoline Holds Firm at 26½c Per Gallon

GASOLINE.—Gasoline holds firm at recent quotations of 26½c per gallon. There is a firmness in the market, due to the slightly higher prices for Oklahoma crude oil. The demand for gasoline keeps up exceptionally well with the continuation of good motoring weather. But even with the drawing to a close of motoring weather, the demand will no doubt keep, as the European demand will be none the less heavy. Farmers will also be using larger quantities during the winter in their gasoline engines in the cutting of feed.

Window Glass Has Firm Tone in Market

GLASS.—Reports from the United States are to the effect that with the naming of new prices on window glass about November 1 an increase over present prices is looked for. Glass makers this year are late in starting their factories; operation will not start until October 25. Dealers in Canada get almost their entire supply of glass from American factories. An advance of about 10 per cent. is anticipated by some of the large concerns when the new prices are named.

BOOK DEPARTMENT

143-153 University Ave., Toronto

THIS is one of the great storage tank rooms where our varnishes are aged before shipping.

Every dealer knows that next to quality, uniformity is one of the leading essentials demanded by the varnish buyer.

All products offered under the same name and bearing Berry Brothers' label are always identical in every particular, no matter how long between purchases.

Body, drying, working qualities, durability and every other feature are fixed facts and not uncertain quantities.

Our accurate methods of manufacture and exceptionally large storage capacity enable us to insure these qualifications.

All our finishes are easy to sell because of their earned record for complete dependability.

LUXEBERRY WHITE ENAMEL—whitest white, stays white Makes a permanent snow white finish in either dul or gloss effects.

LIQUID GRANITE—floor varnish. Makes a smooth, satiny finish. Lasting, waterproof, marproof, also adapted for bathrooms, window sills and casings, and all interior work where great durability is desired.

LUXEBERRY WOOD FINISH—for general interior work. Develops and preserves the grain of all woods, and makes a handsome and lasting finish. Rubs perfectly.

LUXEBERRY SPAR—for exterior work. Especially adapted for durability under extreme exposure—front doors, store fronts, marine work, etc. Makes a handsome finish and will not turn white under the severest conditions of wear.

We make a specially adapted varnish or enamel for every known use.

Write for our price list and interesting dealer's proposition.

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, Oct. 18.—Continued adverse reports regarding the condition of the crops in the Argentine keep coming in. Crushers have small hopes now that the first reports were exaggerated. Drought appears to have reduced the crop of flax by about 50 per cent. Flax seed in Montreal made a sensational jump of eleven cents in one day going from $2.24 a bushel to $2.35. This took place on Tuesday, and on Wednesday the market was exceedingly firm with expectations of possibly a further increase in the price of seed.

United States Demand Lessens

Increasing firmness in prices of Canadian stocks produced a diminution of American demand for the seed and oil. This demand from across the border had contributed a little to the firming of prices when crop reports proved disappointing, but now the principal cause of the high prices for linseed oil is the condition in the Argentine alone. In the opinion of leading men in the business there is not much likelihood of this condition showing any substantial improvement, and linseed prices look like remaining firm.

Business Not Sought

There is a distinct reluctance on the part of large jobbers in Montreal to encourage business in linseed oil at present. The market is far too uncertain. Those who have substantial stocks are inclined to retain them. Prices are firm at last week's figures which are as follows:

Linseed Oil	Raw.	Boiled
1 to 4 barrels	98c	$1.01
5 to 9 barrels	96c	0.99

It is possible in some cases to get linseed oil in Montreal at figures a shade lower than these for instance 95 cents for raw, and 97½ cents for boiled, in small lots, and some firms make their quotations straight for all orders large or small during the present condition of the market, there being, as already stated, no inclination to go in for the sale of linseed oil on any large scale.

Paint in a 'Between Time'

There is no particular activity in paint business at present. The trade is in one of the between times, expecting increasing orders for spring business, and at the end of fall business. Conditions however, are generally reported good, and the outlook for spring trade encouraging. One leading firm of paint manufacturers expressed the opinion that even if linseed oil does go still higher the firm will go very slow in increasing their prices for mixed paints. "We would rather accept a smaller profit" said a member of the firm "The recent increase in prices of paints has satisfied us so far, and business is none the worse for it." That the recent advance was justified long before it came is current opinion in the circles of the trade, but while further increases are being hinted at in view of the excitement in linseed oil, no one seems anxious for them.

Turpentine keeps steady.

While linseed oil has been indulging in pyrotechnics, the conduct of turpentine has been exemplary. No startling changes are recorded as regards turpentine. Quotations maintain as during the past couple of weeks at from 67 to 70 cents per gallon in barrels. The two to four barrel order gains an advantage in price of a cent lower. Smaller orders than a barrel range from 72 cents to 75.

White Lead in Oil

Prices for white lead in oil are all firm as last week, most large jobbers in Montreal quoting $13.80 per 100 lbs. for white lead in oil in 1 ton lots and $14.10 for less than ton lots. The increase in price of linseed oil has not affected the price of lead in oil as yet to any considerable extent. Lead shows a firmness on the metal markets this week, and the trade interested in the product in oil is watching the trend of both metal and oil anticipating further effects from the present firmness of tendency.

Gasoline Keeps Steady

Unchanged for the past two or three weeks, gasoline keeps at 27½ cents per gallon from the tank car, in drums, or in wood (wood packages charged extra but returnable at cash refund.)

Glass Very Firm

The market for glass is very firm, and the hardware trade notes that the discount of 20 per cent. formerly allowed is now reduced to 15 and 5. There is great scarcity of labor and of glass also in this connection, and demand is brisk.

TORONTO

TORONTO, Oct. 20.—There is a generally firmer tendency in nearly all paint commodities. Putty shows a firmness, with an advance not improbable, in view of the high price of linseed oil and the scarcity of whiting. Shellac has advanced, and is firm. Turpentine holds steady, with an increase of 1c recorded by some dealers. Linseed oil is expected to go higher in the face of the advancing flaxseed market. Glass is firm, and dealers are looking for higher prices when the American manufacturers name their prices about November 1. Business on the whole has been good.

Flaxseed Advances And Oil Much Firmer

LINSEED OIL.—The market for linseed oil might be characterized as firm. If larger quantities of oil were in demand at the present time much higher prices would undoubtedly prevail at the present moment. There has been an advance of ½c per gallon in one instance, oil in 1 to 3-barrel lots being now quoted as high as $1.08 per gallon. Prices range down to $1.01½ for raw. In one instance there was a lower price of 97½ quoted until Wednesday of this week, but with the big advance of 8c per bushel in the price of flaxseed on Tuesday over Monday's close, this concern in question decided to withdraw quotations pending advices. Flaxseed at Wednesday's close in Winnipeg was 11c higher than the close of the previous Wednesday, when it was $2.28. On Wednesday of this week it closed at $2.39. Thursday opened strong, with an upward tendency in seed quotations. In some well-informed circles a steady advance in the price of linseed oil is looked for. One man who keeps closely in touch with the situation gave it as his opinion that oil would reach $1.25 a gallon before the winter is over. Reports from the Argentine have not been any more reassuring about the crop there. Snowstorms in the Canadian North-West have also shut off threshing in that section. These are the factors operating to cause a bullish tone in the market. Oil cake continues in good demand, both locally and for export. Prices range from $43 to $45 per ton. There is a noticeable improvement in the

Cash in on Human Nature

It's Human Nature for the Women Folks to Clean House in the Fall.

FOR CHAIRS

FOR FURNITURE

FOR FLOORS

FOR DOORS

FOR WOOD-WORK

A FEW suggestions as to how a little paint will make each home brighter and more cozy will help you to "cash in," but be sure it is "Canada Paint-ed" and insure satisfaction to your customers.

For Walls—Suggest Sanitone, the new washable wall paint that makes the whole house look brighter and cleaner.

For Furniture—Suggest Sun Varnish Stain, Alba Gloss or Art Enamel, according to the finish desired.

For Floors—Suggest Sun Floor Finish, the kind that wears well.

For Iron-Work—Suggest C.P. Stove Pipe Enamel, Fairy Gold Paint or Aluminum Paint, according to the fixture painted and finish desired.

For Woodwork—Suggest Sun Varnish, Sun Varnish Stain, C.P. Wood Tints or the color of Canada Paint to obtain the required effect.

These suggestions will appeal particularly to live C.P. full-line agents.

Ask us about our Exclusive Agency proposition for your district and "cash in" on our 1917 plans.

26 gauge	4 50	4 00
28 gauge	4 60	4 00

Re Gauges of Sheets.

On account of it being practically impossible to secure galvanized sheets from England, owing to the war, American mills have decided that they will no longer roll the English gauges to meet this competition. However, they will continue to roll at 10¾ oz., which will be known as such or a 30 gauge, and will take the place of the former English 28 gauge.

SHEETS, CORRUGATED

	Per 100 sq. feet. Galvanized	Painted

MACLEAN'S *for* NOVEMBER

WANTED—A NATIONAL ANTHEM. Perhaps you yourself have felt in these times of intense patriotism Canada's lack of a real National Anthem; and, if so, Arthur Stringer's magnificent presentation of Canada's need in the November MacLean's will make you say "Amen and Amen." : : : The problem of the returned Soldier—a phase of it—is the subject of a special article which has the sanction and approval of Sir James Lougheed, President of the Military Hospitals Commission; a contribution of genuine interest to all business men : : : Business men will be glad to learn that the fine monthly Business Outlook article is to be added to by a department headed "Information on Investments" : : : Another excellent and timely contribution is "Putting the Crop Across" — how Canada markets her wheat.

H. F. GADSBY writes on "Conserving the Conservatives"—a political article that both Liberals and Conservatives will find good reading : : : Peter McArthur, farmer-author, begins a series of stories in the November Number with "The Witch of Atlas"—extremely good : : : Robert W. Service has another "At the Front" poem—"Fleurette," strong yet tender : : : H. M. Tandy, a Canadian writer of fine ability, has a story, "Straw-Stack Strategy"—fine! : : : Serial stories by Arthur Stringer and Arthur E. McFarlane.

RAMSAYS BULLDOG BRUSHES

Trade  **Mark**

For over a half a century the name of "Ramsay" has stood pre-eminent among the trade, Dominion-wide, in producing the highest quality of Paints, Oils, Stains, Varnishes, etc., etc.—and to-day we have made another distinct step forward in serving the interests of both the dealer in Brushes and the users of them.

BULLDOG BRAND BRUSHES

—are made in Canada by skilled Canadian labor; using the most modern methods, attractively finished, and in variety sufficiently broad to cover all requirements, from the cheaper lines for household trade to the highest possible grades, as used by the skilled mechanic.

Our Trade-Marked line of BULLDOG Brand Brushes is well known to Canadians and an exceptionally profitable line for the retailer to sell

Write for our Catalog and Price List on BULLDOG Brand Brushes.

No Matter How Hard or How Tough—

LINGERWETT

will lift it without hard labor, in short time.

LINGERWETT is the lightning paint and varnish remover. Even the hardest enamel yields to its influence and can be readily removed without effort.

Note the name—LINGERWETT—it stays wet.

Here is a big talking point—most removers dry quickly, making the labor twice as hard for the operator.

LINGERWETT STAYS WET.

MARTIN-SENOUR
PAINTS AND VARNISHES
MADE IN CANADA—SOLD ON MERIT

PIONEERS
of
PURE
PAINT
and
STILL FIRST
in the estimation of
PAINT USERS.

The Paints and Varnishes that fortify you against complaints and make a Big Advance in your turnover.

The exclusive Agency for this line is a most valuable asset to any merchant's business. Martin-Senour Paints and Varnishes are now so well known for their unsurpassed quality and from the fact that they are so extensively advertised, that more and more people are attracted to the store where they are handled, and consequently they are the easiest and most profitable to sell.

The high quality of each and every Martin-Senour Product is such as to retain and increase the demand of those who have once tried them.

Martin-Senour sales help and co-operation is the strongest, consisting of the most effective features of Interior and Exterior Displays, Mailing Campaigns, Follow-Up Systems, and direct help of Salesman.

This policy will not be curtailed.

It will be **continued** and **strengthened.**

Would you not like to be counted as one of our **satisfied** and **successful** Dealer Agents who is profiting by this policy?

Drop a line for our Proposition, but do it to-day.

THE LINE OF LEAST RESISTANCE is the one you should follow if you are looking for real success. The Pratt & Lambert line of Varnish Products is the *line of least resistance for you* — the one that sells quickest and with the least effort. And why? Simply because powerful and persistent national advertising, coupled with sixty-seven years of growing reputation, has made the public *familiar* with the Pratt & Lambert line. They will accept P&L goods because they *know them.*

You realize, as do most live dealers nowadays, the importance of this *friendliness* on the part of your customers, toward the different lines you carry. It's a mighty uphill job today to sell an unknown brand of goods against one whose name is familiarly and favorably known, *no matter what the relative prices may be.* Handling the P&L Line—the "Line of Least Resistance"— is insurance against cutthroat prices, over-stocked shelves, and unpleasant complaints.

We want *you* for a P&L man. Write for P&L Dealers' Proposition.

DEALERS, ATTENTION

NOVELTY
SELF-FEEDER
HOT AIR
FURNACES
are the best sellers

The whole trade wants them because they make sales; because they save—
TIME, LABOR, COAL

Because they heat equally
ALL DAY and ALL NIGHT

The self-feeder principle places "NOVELTY" furnaces, which have been leaders for 30 years, away ahead of all others and—
THEY COST NO MORE

Write now for Catalog and Prices.

Condensed or "Want" Advertisements

There is always someone, somewhere, who is looking for just such a proposition as you have to offer—and it is more than likely that he is a hardwareman and a subscriber to HARDWARE AND METAL. Let an advertisement on this page bring you together.

RATES (payable in advance): 2 cents per word first insertion, 1c per word subsequent insertion. An additional charge of 5 cents for each insertion is made when Box Number is required. Each figure counts as one word.

SITUATIONS WANTED

THE "CHANGING TIME" IS GETTING near. There are many firms who have vacancies on their sales or office staffs to fill during the next few months. If you want to qualify for some of these vacancies, tell your story briefly in a Condensed Advertisement, and try in out in Hardware and Metal. A twenty-five word advertisement may land you a permanent position with splendid prospects.

SPECIALTY SALESMAN DESIRES POSITION as sales manager or traveler. Twelve years' experience calling upon Ontario hardware trade. Box 313, Hardware and Metal.

AGENCIES WANTED

FOR BRITISH COLUMBIA — MANUFACturers' agent, with highest references and four years' connection with best hardware trade, desires agency for one or two additional high-grade and quick-selling lines. Commission basis. Best of opportunity for firms desiring continuous representation from now on at minimum cost. Ideal time for getting established. Only permanent agencies considered. Box 544, Hardware and Metal.

THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms, is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal, under this heading.

STORE EQUIPMENT FOR SALE

YOU MUST HAVE A LOT OF OLD FIXtures around the store which are no longer of any value to you, but would prove very useful to someone else in the hardware business. Find a purchaser for this equipment through an advertisement on Hardware and Metal's Condensed Ad. Page.

FIFTY DOLLARS TIED UP IN OLD FIXtures that you are no longer using, would make a lot of money for you if invested in stock and turned over three or four times a year. Get your money out, by selling the fixtures to one of Hardware and Metal's readers who may be looking for exactly what you have to offer.

HARDWARE WINDOW DRESSING—THIS is the first book ever written devoted exclusively to Hardware Display. There are 256 pages and over 200 illustrations with full working descriptions. It is the purpose of this book to illustrate and explain how hardware windows may be dressed to the best advantage—how they can be made to sell goods. It is not a theoretical work but a collection of specimens of the best work and ideas of the most expert window dressers in the world. These men have contributed their experience covering the many phases of hardware window display. This volume, therefore, represents the sum total of information on this subject presented as concisely as is consistent with clearness. By following the simple illustrated directions given in "Hardware Window Dressing" any clever clerk can put in good hardware displays at no cost whatever. Size 8 x 11 inches. Price $2.60 postpaid. MacLean Pub. Co., 143 University Ave., Toronto.

SITUATIONS VACANT

WANTED—A YOUNG MAN WITH EXPERIence in the hardware business, to act as clerk; also assistant shipper for the shipping room, with some knowledge of checking and packing goods. Please state age, experience and salary expected. Apply to Sumner Co., Moncton, N.B. (43)

WANTED EXPERIENCED HARDWARE clerk. State experience, references and wages. Apply to Box 400, Hardware and Metal.

WANTED—AN EXPERIENCED HARDWARE clerk. Apply, stating experience, wages expected, also give references, to Box 270, Orillia, Ont.

BUSINESS CHANCES

IF YOUR HARDWARE BUSINESS IS FOR sale, who is more likely to buy it than a hardware man, be he merchant, clerk, or traveller? It is only hardware men who read Hardware and Metal, and a condensed advertisement in this paper offering your business for sale, will put you in touch only with the people who will be most interested.

MISCELLANEOUS

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada. (tf)

ADDING TYPEWRITERS WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited. Room 314, Stair Building, Toronto.

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fenson Elevator Co., Toronto.

HARDWARE STORE BUSINESS METHODS —The authors of the articles in this book are for the most part practical and progressive hardware merchants. The embodiment in these articles of the experience of such able and enterprising men and the suggestiveness of the principles and maxims presented make this volume of infinite value to that trade. The 40 subjects discussed include: Rules and Regulations for the Hardware Store; Hardware Buyer; Good Methods in Stock Taking; Prices and Catalogues; Collecting Accounts; The Merchant and His Employees; Changing Business Conditions and How to Meet Them; Profit Figuring System; Starting in Business; Changing a Credit into a Cash Business, etc. 220 pages. Price $1.10, postage paid. MacLean Pub. Co., 143 University Ave., Toronto.

Do a Big File Business

The chances are that you have many machine shops in your community where files are used. We put it to you that you should make a dead set to have every one of these shops use

DELTA FILES

We'll work with you **hard** to get Delta Files introduced and if this happens it means a very nice annual business for you if you have the local agency for Delta Files.

We say this:

Delta Files outlast all other files; will cut faster and retain their cutting edges longer than all other makers' files.

We guarantee this; for we **know**. We've been 50 years at the business and we've been up against competition all this time. We **know** by trial that our files will back up **every time**.

Delta Files

are the only files from 3 to 24 inches made absolutely from crucible steel.

Now will you write us and tell us how things stand in your community? We'll tell you how we work with you to get the file **business** of every shop.

Delta Files can be ordered through your jobber.

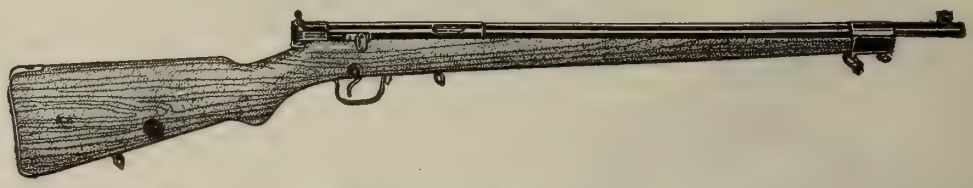
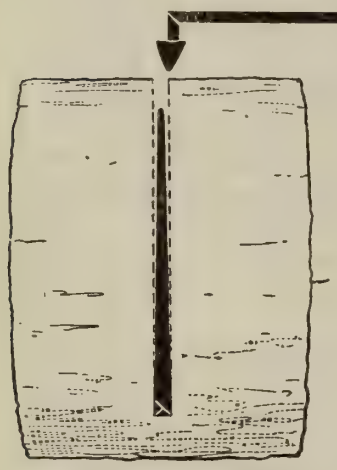
WHEN trade begins to boom it will be exceedingly difficult to jump in, overtake and pass the man who continued, even in times of depression, to paddle his advertising canoe.

It will require a high power campaign and lots of anxiety to do it. Even at that the persistent advertiser may beat the other fellow to it.



If interested, tear out this page and keep with letters to be answered.

An Early Christmas Showing of Ross Rifles



Is Sure to Attract Profitable Trade

Boys and girls are thinking of what they want for Christmas. A display of Ross .22 Cadet Rifles is sure to catch their eye. Once they see this splendid little gun, there is no rest for their parents until, convinced that it is no toy but a perfectly safe and reliable rifle, they put a Ross Cadet into the Christmas stocking.

When ordering don't forget the grown-ups — nothing attracts quicker attention than a display of Ross Sporting Rifles. Ross Sporting Models retail at $25.00 and up, Ross .22 Cadet at $12.00. For catalogue, discounts, etc., address

McKINNON
ELECTRIC SWELL-WELD
CHAIN

Tests taken at McGill University have proved our ELECTRIC WELDED chain to be fully 25% STRONGER than B.B.B. FIRE WELDED chain. The chain tested was taken from the stock of a Montreal Jobber.

The three principal reasons for this increased strength are: 25% more welding surface allowed by the swell-weld, special analysis material, and care in manufacture. It is only natural that successful products should be imitated. Protect yourself by asking for McKinnon Chain.

That Good "Richards-Wilcox" Trolley Track

PICK up a length of it and look it over carefully. Run your eye down one side and then down the other side, and see how straight it is.

Look through it and see how straight the runway is. See if there's any twist or bend or warp in it.

Now put a Champion 321 Hanger in it. Observe that the only point of contact is right on the tread, where the machined wheel runs on a flat surface, eliminating all friction.

It is the only track on the market in which the wheels cannot scrape the side of the box, or the pendant scrape the flange.

There are cheaper hangers than "R-W" —there are none so good.

When a farmer buys a trolley hanger, he thinks he is buying the best. Sell him THE BEST rather than the second best.

Pocket Ben

A *Westclox* Watch

POCKET BEN had an eye for the sales sheet when he had that box designed. That shade of brown, that white corner edge, that orange script lettering, all trade on six years of Big Ben publicity.

They all work to shorten the distance from the customer's pocket to the till. That box is a sales talk and recommendation all in one.

The good looks of Pocket Ben himself clinch the deal and it's a matter of take in the money and ring up the sale.

From the way orders are coming in, he's out to break sales records. It looks as though he was going to put it over big.

Pocket Ben is well designed and finely finished The case is nicely rounded and well-proportioned, the dial, clear and distinct. It has the same style, light running, reliable movement that makes *Westclox* so successful.

Each dozen is packed in a carton with two display cards and a novel display stand for your window or show case.

With an order for three dozen at your request we send a handsome walnut display rack shown above, a very attractive fixture.

There's a good margin of profit in Pocket Ben. The box and selling helps create a good demand. Is it any wonder they sell faster than we can make them? Furnished in nickel or gun metal.

DAVIDSON'S "STERLING" ASH SIFTER

"Special Features"

It separates the ashes from the Cinders quickly and efficiently.

It does the work without making any dust.

It is easy to operate. By turning the handle the ashes fall through to receptacle beneath, and cinders are automatically discharged into the coal hod.

It is made of galvanized steel and will not rust, while there is nothing to get out of order.

THE THOS. DAVIDSON MFG. CO., LIMITED

TORONTO MONTREAL WINNIPEG

The Greatest Smoke Producer Known

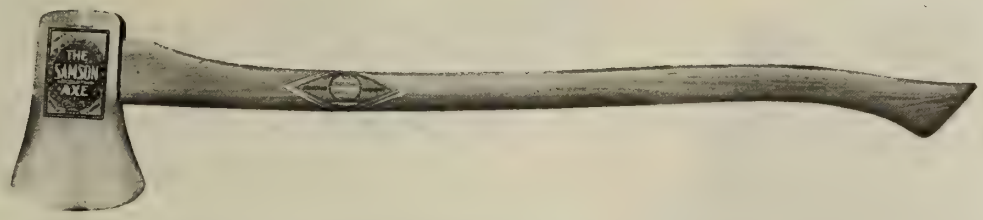
The Thomson Smoke Machine

The Thomson Smoke Machine is an invaluable friend to the plumber in testing new or old plumbing. All he has to do is simply to take the machine to the job, apply the test, and if there are any leaks the machine will indicate such and they can be easily traced by the smoke issuing from them.

Simplicity.—So simple that a novice can work it.

Sensitiveness.—So sensitive that it will indicate the smallest leak.

Durability.—No glass gauge to break. No valves to clog. Nothing to get out of order.



Portability.—A boy can carry it with one hand. It is 16 inches high, 11 inches square.

Smooth and Easy Action.—Double acting bellows, can be worked with one finger.

CANADA STEEL GOODS CO., Limited, Hamilton, Canada

ANY Saw will show a profit,
DISSTON SAWS do MORE

Anything a dealer sells will net him a profit at a given figure, but the progressive dealer demands more from the goods he carries than the mere profit in their sale. He selects such goods as will best reflect the policy and personality of his establishment; goods that will advertise the high standard of excellence of his entire line; goods that are a credit to him and his store, both before and after they have been sold. Customer satisfaction and good-will are not fostered by the sale of inferior tools, and good-will is indispensable. That's why the live dealer demands the profit, **plus.**

Disston Saws mean more than quick and easy sales, due to a world-wide popularity (more Disston Handsaws are sold than other makes combined). They are the brand most frequently called for, but that is not all. Disston Saws are backed by three-quarters of a century of saw-making; they are made in a plant whose magnitude dwarfs all others, and where the refinement of process and equipment surpasses anything possible on a smaller scale of production. And this high standard of quality is the dealer's best route to his greatest possible asset—customer confidence.

Henry Disston & Sons, Ltd., 2-20 Fraser Ave., Toronto, Canada

Quality Service

Courtesy in Business

Fittingly framed and hanging in the Offices of one of the most important Public Service Corporations on this North American Continent is the following

'Did you say Please and Thank you?'

Broad minded men direct the destiny of that Corporation, men who know that public or private enterprises to be lastingly successful must operate for the public good.

Quality and Service are the two important factors in our business life today, but Courtesy is the door through which they must enter.

We are large producers of Hamilton Pig Iron and our output of Open Hearth Steel Blooms and Billets, Iron and Steel Bars of all shapes and size runs into enormous tonnage.

The products of our mills include practically everything that can be manufactured from Iron and Steel and these we distribute to thousands of satisfied customers.

Our business is an extensive one and a successful one. The World is our market: but our prosperity and success in the future, as in the past, depend upon the continued confidence, co-operation and good-will of the people we serve.

The Steel Company of Canada, Limited

1847 ROGERS BROS.

SILVERWARE

A Sales Policy That Benefits All

AS recently announced, and as set forth in our Catalogue No. 27, it is our purpose to exercise the privilege to fix a minimum resale price to the consumer on

1847 ROGERS BROS.
Flatware and Cutlery

The dealer who co-operates in maintaining the prices in our suggested Retail Price List helps himself while helping us, for he safeguards his interest against the price cutter whose influence is destructive to sane retailing policies.

By closing the source of supply to those who persist in price cutting, we act within our rights and we give you protection that is necessary to the successful conduct of business.

We believe that retail merchants of Canada are almost to a unit in favor of and desirous of adopting a fixed price on nationally advertised and standardized trade-marked articles of merchandise, and we propose to assist and encourage "fixed prices" and "price maintenance" on the ware we manufacture and distribute.

"Silver Plate that Wears"

"1847 Rogers Bros." is sold with an unqualified guarantee made possible by the actual test of over 65 years. There are other "Rogers" and other kinds of silverware, but there is only one genuine "1847 Rogers Bros." Send for Catalogues No. 27 and No. 28.

MERIDEN BRITANNIA COMPANY, Limited
HAMILTON, CANADA

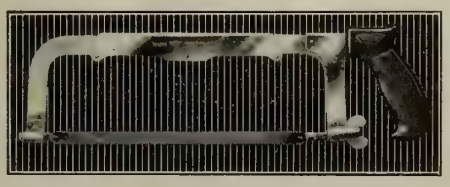
Are You Using Our Free Display Fixtures?



Displaying tools was a big problem before our handsomely finished displays of unique design made it so easy. No more stapling and wiring tools on panels that don't "stick out" of the window display, nor look effective after the endless work of getting them ready.

You just put a few tools on the Millers Falls displays. Put them in the window with a few tools on the floor of the window and the display is all done. Takes only minutes where tool windows used to take hours to prepare.

And they make 1000% better looking windows besides!

Send for book showing all the Dealer Helps we offer you free—also book "How To Sell Tools" that is recognized as authority on the subject. The book that has made thousands of hardware merchants Stop, Look and Think.

If you are not thoroughly familiar with what we are doing to help retailers get a higher batting average in selling tools—write us to-day before you do another thing.

Here's Star Hack Saw 1019, which is the last word in effective frame construction. Costs so very little more that no mechanic can afford to buy the old inefficient kind.

Pistol grip and "hang" of saw give you the greatest power with the least effort. Blade allows maximum stroke and handle fits any hand.

KIR-BEN

TRADE MARK

The Kir-Ben Steel Range

Quite apart from the items of materials, finishes, accessories and other concrete phases of a **Kir-Ben** range are these three supreme things.

Its ability to bake well.

Its ability to save fuel.

Its power to live long as an efficient utility.

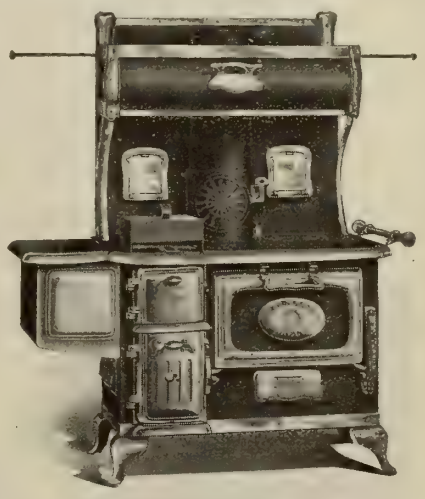
These three supreme things are admirably realized in a **Kir-Ben** Steel Range. Here are some particulars briefly put for your information:

Design.—Neat and plain. No fussy ornamentation or fancy nickel.

Construction.—The **Kir-Ben** Steel Range is very heavy, lined throughout with Asbestos and Steel. Roomy Firebox (will use wood 27" long), Duplex grates. Special wood firebox. Dead air space beneath oven, to keep flue warm and oven even.

Improved Flue—So constructed that heat covers five sides (all but the door); so is 25% better than ranges which heat only four sides as is general. Heat in a Kir-Ben makes only four turns as against six turns in other makes; so 33 1/3% less friction. So fuel is saved.

Oven.—Very large (20¾ x 20 x 12½). Perfectly square. Door is evenly balanced and opens evenly and quickly. Door has two inches dead air space to prevent chilling of oven.



Thermometer.—A decided convenience.

Economic Damper.—Greatest efficiency device ever put on a Range. Means a saving of fuel of from 15 to 25%. The one device that gives absolute control of fire under all conditions. These are some outstanding features which make the

Kir-Ben Steel Range

distinctive, better and best.

This range you can sell. It has the talking points. Send for catalogue and learn more about it, looking forward to the **Kir-Ben Agency.** Get the Agency particulars now—the season is right.

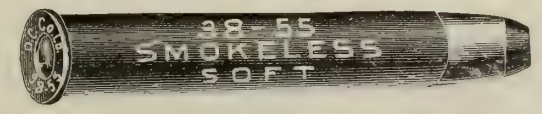
Dominion Metallic Ammunition

Indoor rifle shooting has started again and Dominion .22 Calibre Cartridges are in demand. They won first place in the minds of the majority of users last season for their accurate scores.

Whether it be the .22 short, .22 long, or the .22 long rifle size, your clients will not be disappointed if they use Dominion Ammunition.

We sell it under a guarantee of absolute satisfaction when used in standard make of arms.



In the various processes of manufacture of all the Dominion output, only the most skilled workers are employed, and rigid tests are regularly made at all stages of the work. This, together with the most efficient machinery, combine to make a finished product that is not excelled for accuracy and dependability by any ammunition. We commend the Dominion Sporting and pistol sizes as well as the indoor Rifle sizes. Leading Sportsmen now order Dominion Ammunition by name and insist on having it.

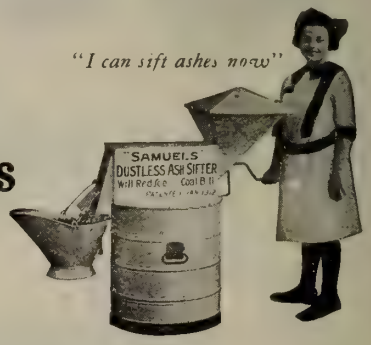
Economy This Winter

The Government is preaching it. Bankers are, Editors are. For war costs must be paid, and economy and thrift, personal and domestic, will pay our share of the appalling war debt that daily mounts higher.

Economy begins in the cellar—with a CANADA DUSTLESS ASH SIFTER. It will save pounds of coal a day, many pounds in a week, a ton or more in a winter. With coal at $8.00 or more per ton, we ought all to economize.

Put it up to your customer TO SAVE COAL and you'll have no trouble to sell the

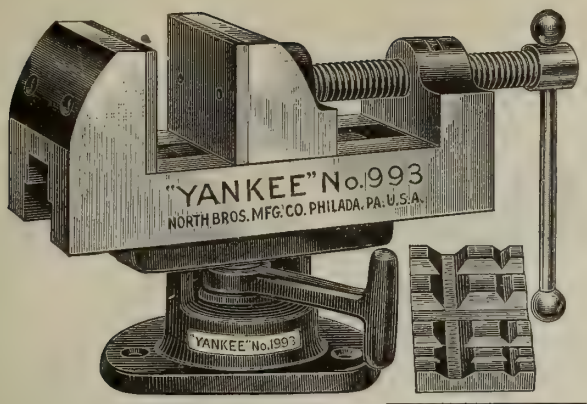


CANADA Dustless Ash Sifter

(See illustration)

Ashes go in barrel—coal into scuttle. Positively dustless and lasts for many seasons.

Every family is a prospect, and every sale represents a nice profit—found money to you. Have a half-dozen or so always on hand.



Jobbers everywhere supply them; order through them.

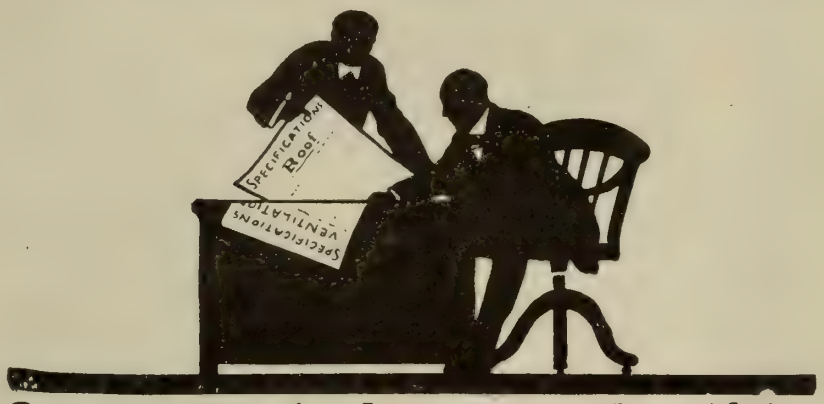
Toncan Metal News

Vol. 1—No. 4 PUBLISHED IN THE INTEREST OF BETTER SHEET METAL October, 1916

BANK BUILDING'S HEATING SYSTEM IS MADE OF TONCAN METAL



In the basement of the Amsterdam Savings Bank, Amsterdam, N.Y., is a very elaborate heating system for which Toncan Metal was specified and installed because the owners wanted something more durable than ordinary sheet metal, and yet the cost had to be moderate.

Owners of buildings do not want to be troubled with repairs to their heating and ventilating pipes because of corrosion. They want to install them and forget them. Toncan Metal will help them do it.

And the sheet metal man who suggests of his own accord the use of more durable material for this purpose will soon find that he is getting some of his competitors' business.

Amsterdam Savings Bank; Amsterdam, N.Y.

Over 4,000 Architects are Specifying Toncan Metal

WHAT does that mean to you, Mr. Sheet Metal Man? It means that 4,000 influential men are boosting the sheet metal business—boosting your business.

Architects who would not specify ordinary sheet metal roofing heretofore, because of its short life, are now specifying Toncan Metal. And, of course, you gain.

Toncan Metal has helped the sheet metal business and it deserves your co-operation. Will you help boost your own business by using corrosion-resisting Toncan Metal?

ASK FOR A COPY OF THE "SHEET METAL PRIMER"

The Pedlar People Ltd., Oshawa, Ont., Distributors

The Stark Rolling Mill Co., Canton, Ohio, Sole Makers

Rust-Resisting TONCAN METAL

Answers to Questions

S. J. W.: No commercial sheet metal is 100 per cent. pure. Toncan Metal is as near 100 per cent. pure as it is possible to make commercial sheet metal from iron ore. A very small amount of certain impurities are essential to give the material strength, ductility and other necessary properties.

R. S. G.: Toncan Metal Sheets and Products are readily identified by the well-known double diamond stencil in red. This stencil appears from two to three times on every Toncan Metal flat sheet or piece of roofing. On Eaves Trough, Conductor Pipe, Elbows, Shoes, Mitres and Cut-Offs made from Toncan Metal the Toncan Metal trade mark is also stamped into the metal.

B. L. N.: You can avoid the danger of receiving lighter than 28 gauge roofing by specifying Toncan Metal because Toncan Metal is not made lighter than 28 gauge Galvanized and 26 gauge Painted or Black.

A COMMON FALLACY

There is a tendency among tinners to merely order "Galvanized Sheets," in the belief that all galvanized sheets are of the same quality.

Although the galvanized coating may have the same appearance on all sheet metal, the metal itself, under the coating, actually governs its life.

Toncan Metal Sheets resist corrosion because of their purity, homogeneity and scientific methods of production and not solely to a protective coating.

Therefore, by distinctly specifying **Toncan Metal** Galvanized Sheets, real durable sheet metal is assured.

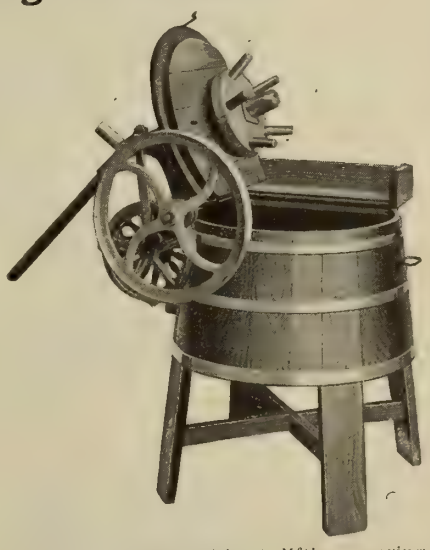
The London No. 5 Hand Power Washer

The last word in modern washing machines



With lid closed showing perfect covering of gears.

This latest addition to the London line, like the No. 1, has the secret of its superiority in the high-speed fly-wheel. But it has many improvements.

Machine-cut gears. Bearings babbitted, making it run smoothly and noiselessly, reducing friction to a minimum. The dolly is self-adjustable, smooth and round, with galvanized cap covering dasher centre. The "London" No. 5 is so constructed that with but slight expense it can be very successfully run by power, either gasoline or electric motor. The fly-wheel being placed directly on the hinge line, remains stationary when the lid is opened, and is therefore not lifted with the lid, and any belt attached to it remains at the same tension.

Let us send you our catalogue and prices.

With lid opened without lifting gearing. flywheel on hinge line.

Making Better Use of "Charge" Checks

Many Stores Enter Into a Day Book or "Charge Account" Book and Then Into Ledger How to Use Counter Checks as a Day Book—Helpful Systems of Woodstock and Toronto Stores

METHODS of keeping a record of the daily sales of clerks, and extending these to monthly and yearly totals, and some points on loose-leaf ledger systems were discussed in last week's issue. This time some forms will be reproduced through the courtesy of a Woodstock hardware firm, Gardner & Co., and in these other merchants may find points that will prove useful to them in their own bookkeeping. At first only the simpler methods will be discussed, with "departmentizing" on at least a small scale—say for three departments—as the ideal to be reached.

Let us follow a few entries through various operations. James Thompson buys an aluminum pan for forty cents and the article comes in marked "charge." It is entered in the "Charge Account Book," indexed for each letter of the alphabet, as follows:—

5.—Sept. 16. James Thompson.
Aluminum pan ..... .40

This is entered under "T," the "5" denoting that it is the fifth entry, the others being charged to four other people or firms.

Entering in the Ledger

From this "C. A." Book entries are made into the Loose Leaf Ledger, also indexed. The entry under James Thompson includes the date, "description of goods"—"mdse.," not the article or articles—the folio, which in this case would be 5, taken from the Charge Account Book; "debits"—the amount, 40 cents—the check—and debit balance, the total amount owing at any one time. When another "charge" item comes in during the same month, it is entered on the next line, and all the rest for the same month. **See Form A.**

When the bill is sent out and the money comes in in payment, an entry is made on the right side, opposite the entries for September, $2.16, and to show that the account is "square," a red line, or double black line, is drawn under the total of the debit, and also under the credit payment. **See Form B.**

The form of this credit entry is much the same as the debit, the words "By Cash" appearing under "description," and the folio coming from the Cash Book or Cash Journal, "C. J." entry.

The Handling of Invoices

The handling of invoices is done in this way:—

LOOSE-LEAF LEDGER—DEBIT SIDE—FORM A

James Thompson

Date	Description	Folio	Debits	Ck.	Debit Bal.
Sept. 16	To Mdse.	5	.40	V	
Sept. 29	To Mdse.	38	1.76	V	2.16

LOOSE-LEAF LEDGER—CREDIT SIDE—FORM B

Date	Description	Folio	Credits	Ck.	Cred. Bal.
Oct. 17	By Cash	c.j. 8	2.16	V	

INVOICE BOOK—FOR SEPT.—FORM C

Date	Name and Address	Terms	Due Date	Amt.	Total
Sept. 6	John Rogers, Montreal	2 p.c. 30	Oct. 6	53.81	
Sept. 18	John Rogers, Montreal	2 p.c. 30	Oct. 18	9.64	$63.45

PURCHASE ACCOUNT—CREDIT SIDE—FORM D

Date	Description	Folio	Credits	Ck.	Cred. Bal.
Sept. 1	By Mdse.	186 (1.3.)	53.81	V	
Sept. 12	By Mdse.	186	9.64		63.45

PURCHASE ACCOUNT—DEBIT SIDE—FORM E

Date	Description	Folio	Debits	Ck.	Debit Bal.
Oct. 8	To Bank	484 c.j.	63.45	V	

When the invoice comes in it is entered in an Invoice Book, under these headings—Date, Name and Address of Firm, Terms, Due Date, Amount, and Total, where there is more than one invoice, during the month. **See Form E.**

The ledger entries are similar to those of charge accounts. After being entered in the Invoice Book, the invoice is entered in the ledger, on the Credit side first, of course, as in **Form D.** The entry under "Description" would be "By mdse." and the entry under "Folio" would be the page in the Invoice Book or the number, if each invoice is numbered consecutively, as is often done. If another invoice came in the same month, it would be set down here, and the Credit Balance would be the total, $63.45 in this instance.

As soon as the invoice is paid an entry is made on the Debit side **(See Form E.)** from the Cash Book and a red line (or double line in black) is ruled under the amount on each side, debit and credit, so that this, now settled, will not be mixed up with new invoices.

Keep Separate Invoice File for Month

As for the handling of the invoices themselves: Gardner & Co. start out the year with all invoices in January filed as they come in under their alphabetical letter, which allows of easy reference to any marked down in the Invoice Book or Ledger. Then February's are filed by themselves, but when March comes, February and January are filed together, in alphabetical order as before, and March, later, is added to the other two. These are placed in ordinary letter files and would appear as follows, say, in October:—

INVOICES
Jan.
Feb.
....
....
Sept.
INVOICES
October

Record of Each Counter Credit

In the Gardner store it is thought best to keep a record of each individual sales slip, a counter check under the name or number of the clerk. In addition, of course, a summary is made up, giving the total for each, and the total for all for the day. This record is extended to the month as well, and the year. The method is illustrated in **Form F.**

VARIATIONS OF OTHER FIRMS

A Unique and Handy Use of Sales Slips by Russill Hardware Co.

A study of the bookkeeping systems of hardware firms suggests that a pattern has been taken from the creation of mankind—there are no two alike in the world. Theories of one are rejected by another, or if the same system is followed, changes are introduced, or short cuts, that are considered to fit in better to the particular store using them.

Using Counter Checks for Day Book

HARDWARE AND METAL was shown the system of the Russill Hardware Co., of Toronto, and noticed there a very practical use of the sales slips or counter checks that has not been tried out, we believe, by many stores. This would do away with the need for a Day Book or Charge Account Book that so many stores use. The Russill Co. go on the principle that the counter check should remain the record of the details of each sale, and the only one needed. The great trouble with merchants has been that they have found it difficult to keep track of these slips so as to be able to find any particular sale easily. Suppose you have 35 charge sales during a day, continued for a month, it is slow work picking out any special one weeks after. So the Russill system starts at the beginning of a month, say, September, with the first charge counter check and marks it 1, the second one that same day is No. 2, the third one No. 3, and so on. Perhaps the last one of the day is No. 29. Next morning the first one filed is No. 30, and the last that day may be 54. Towards the end of the month the numbers may run 963, 964, and so forth.

As soon as September is over that file

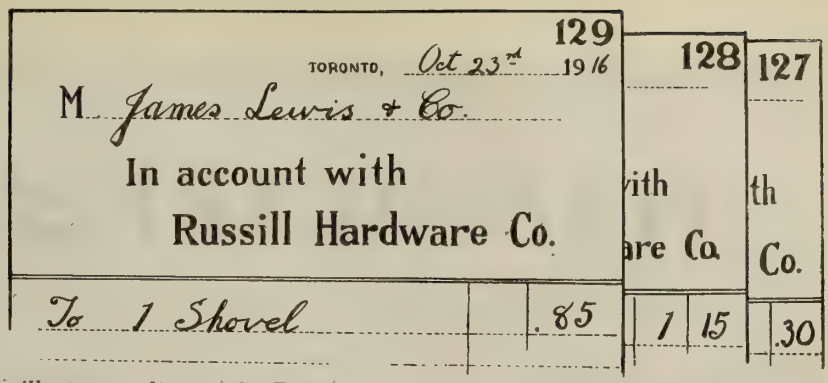
(In red ink) Oct. 17, 1915	$154.36	$111.40

is put away and a new one opened for October, beginning at 1, so that there would be a 243 check for September and a similar number for October and all the other months.

Tracing Counter Check by Number

Now, as to the practical use of this. Take the original transaction, the sale of an aluminum pan for 40 cents. In most stores when the charge counter check comes in this is entered in the Day Book and a separate entry made from this to the ledger. Why the two? The Russill store takes the counter check and marks it, say, No. 267, as under September file. In the ledger is entered, either "To mdse., 40 cents," or "To aluminum pan, 40 cents," whichever you please—entered on a form that will be sent out as a monthly account to the customer, and under this is a carbon and the store is given a duplicate record also through the same single entry. Now how to trace the sale from the ledger entry? Simply by the "folio" number 267. Look at this in October or November, or next year any time, see that the sale was made in September and turn up **your bound book** of September checks, and at No. 267 you will find the original counter check. Why then the need for a Day Book entry in addition?

Grouping All Charges to One Firm



Let us carry this system of numbering the charge counter checks one step farther. Not for the average store, but for one that does business with factories or contractors who get a dozen items a day. Perhaps under one firm, Thomas Ingram & Co., you will have these dozen charges for a single day in your ledger:—

	Folio.	
Sept. 26 to mdse.	148	.85
" " " "	156	1.15
" " " "	162	2.65
" " " "	166	4.00
" " " "	171	.85
" " " "	184	4.00

Here are not only six lines used for the purchases charged against one firm, say a factory, in one day, but there are two items, 85c, perhaps for shovels, and two items, $4, say, for door hangers, and the counter check in each case is numbered differently. Some firms, who carry out the Russill system of numbering the charge checks consecutively, would group these six charged to one firm at the end of the day, and call them all No. 148, or No. 171, or whatever number came next, and enter all six in the ledger by one item, thus:—

Sept. 26, To mdse. 171 (Folio), $13.50

However, where few firms have more than one item charged in any one day, the other method of a separate number for each counter check works out very satisfactorily.

This illustrates the use the Russill Hardware Co. make of their counter checks so as to avoid the need for a day book entry. Each as it comes into the business office is numbered, month by month, starting at one. Then the entry is made in the ledger, "To Mdse.," and the number in the folio column is 127, 129 or whatever the number of the check is.

Retailer and the High Cost of Living

Report of Delegation That Appeared Before Cabinet—Address of Representatives of the R.M.A., Who Were Present to Define the Position of the Retailer.

ON Friday, October 20, a delegation, consisting of representatives from the City Council of the Cities of Toronto, London, Kingston, Ottawa, Windsor, Peterborough, Montreal, Brantford, Forest, and St. John, N.B., accompanied by members representing the organization of "Canadian Municipalities," the Trades and Labor Council, and the National Council of Women, waited upon the Hon. Robert Rogers, Minister of Public works; Hon. Thomas Crothers, Minister of Labor; Hon. C. I. Doherty, Minister of Justice, members of the special committee who were appointed by the Dominion Government to enquire into the reason why the price of a number of articles, especially foodstuffs, have increased during the war.

In view of the fact that some portions of the public press are putting the blame of the increased cost of the Retail Trade and others who favor theoretical socialism, and are constantly urging the municipalities to go into the retail trade, a delegation representing "The Retail Merchants' Association of Canada" was there to defend, if necessary, any charge that might be made against them.

The delegation consisted of Henry Watters, President of the Ottawa Branch of the Association; E. M. Trowern, Secretary of the Dominion Board, and Messrs. Collines, Smith, Stoate, Slattery, Charlebois, Butterworth, Ray, Dwyer, and Levesque, all of whom are interested in the various sections of the association. In order to show the willingness to make their position clear. Mr. Watters and Mr. Trowern addressed the committee.

Address of Secretary

Mr. Trowern said in part: "I am pleased to know that the arguments that have been presented to you, although some of them hinted at the retailer as being the cause of the high cost of living, have not been made sufficiently pointed as to call forth a strong defence from us. We appear here to show by our presence that the Retail Merchants of Canada in all lines of retail trade have nothing to hide or nothing to fear from any charge or any investigation that the Government may desire to make. We are living in extraordinary times, and under extraordinary circumstances, and I personally cannot conceive of any man with red blood in his veins trying to take advantage of the people when our boys and our friends and our relatives are fighting to preserve the principles of liberty and freedom. Many charges have been made against the cold storage system, which means those who operate them. Why have these people not been interviewed and the facts ascertained? Are they not citizens of Canada? Perhaps when an investigation is made it may be found that thousands of pounds of beef and other foodstuffs may be there waiting an order to be shipped as soon as they are required. Should we wait until the vessels are at the dock for the cargo before we gathered the foodstuffs together? Then why make charges unless they have some foundation in fact? Our association stands ready to give the Government all the assistance it can by appointing a committee to act with other committees, or informing the Government on any question pertaining to the retail trade that is within its power. Any investigation made into any line of trade, coal, meat, groceries, produce, or any other line will show that no blame can be placed at the door of the retailer in Canada.

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVIII. TORONTO, OCTOBER 28, 1916 No. 43

EDITORIAL NOTES

NEXT week's issue will be the big Export Number.

* * *

THE HIGH Cost of Living is becoming a very sore issue.

* * *

PAPER advances are likely to create a new situation —The High Cost of Reading.

FURTHER ADVANCES TO COME

PRICES have never before moved upwards with such alarming rapidity as to-day. Old record prices have long since given way to new ones. Prices of some commodities have reached levels, which a year ago were thought impossible. Abnormally high prices now prevailing tend to make buyers cautious, lest something unexpected causes present high prices to come down to what would appear to be reasonable levels. Reference to the market reports elsewhere in this issue gives an idea of what is happening almost every week in the hardware markets. For months the trade have been looking for the end of the advance movement, but so far in vain. As yet there is little evidence that the higher-priced movement is about to receive a check. Buying continues at a remarkably fast pace. Many manufacturers have more orders than they expect to be able to fill for some months to come. Owing to the scarcity of labor there is little or no likelihood of over-production. The business is waiting for the manufacturers who are able to fill the orders. There is a serious scarcity of many lines of goods. With each succeeding week prices which were thought to have reached an extreme position move upward and yet the demand for these commodities continues unabated. Prices on many commodities have been withdrawn and are only made on application. Not a few large concerns are in a position when they can pick and choose their orders. And yet there are no signs of weakening. The demand for iron and steel is as insistent as ever. At the present time the outlook is for a continued heavy demand, and consequently, high prices.

Elsewhere in this issue is a report of the conventions of largest hardware organizations in America. The reports as they appear in this issue give the views of some of the best authorities. It will pay every hardwareman to read carefully the convention and market reports in this issue. Even higher prices than those now in effect are predicted for many products carried and sold by the hardware trade.

CONTRACT FORM NEEDED

DURING the course of his address before the National Hardware Association, President Bihler referred to manufacturers who are not fulfilling contracts made during the early stages of the war. This matter has been referred to on a number of occasions by HARDWARE AND METAL, and some of the Canadian jobbers have, to a certain extent, been inconvenienced, by the refusal of a few American manufacturers to take care of their obligations, and fulfilling their contracts. President Bihler, in suggesting that a new form of contract be adopted, stated in part as follows:

"There are some manufacturers, but fortunately, only a few, who have broken faith with their customers, and who decline to recognize their moral obligations, and others who have forced the jobbers to pay premiums to have their orders filled. While this Association takes no part in any controversy between the buyer and the seller, we know of numerous cases where manufacturers have acted in a most unfair manner, and disregarded their responsibilities, while many contracts have been subject to new interpretations and cancelled at the pleasure of the seller.

"This suggests the necessity for a new form of contract, simple yet effective which is fair to both buyer and seller. It should be agreed upon and adopted as a standard by the hardware trade. Manufacturers and jobbers should co-operate and set it moving. A 'contract' is not a mere scrap of paper but an obligation, legal and moral, binding on all parties and its terms and conditions should be absolutely fair and faithfully observed."

Expect Long Period of High Prices

Prominent Speakers at United States Conventions Give Views Regarding To-day's Problems—Jobbers Recommend New Contract Form—Trade Should Take Just Profits

THE thirtieth convention of the American Hardware Manufacturers' Association, and the twenty-second annual convention of the National Hardware Association, were held at the Marlborough-Blenheim, Atlantic City, last week.

The conventions, both from social and business standpoints, were the most successful in the history of the two associations. There was a record-breaking attendance at the National Hardware Association convention, and an attendance of over 1,300 at the Manufacturers' convention. The first meeting was held on Tuesday by the Auto Accessories Branch of the National Hardware Association. The importance of this comparatively new branch of the association can be judged by the lengthy list of subjects which were discussed as follows:—

"The Value of the Wholesaler of Hardware as a Distributor of Automobile Accessories," by Willis S. Brown, Jr., of Eclipse Manufacturing Company, Indianapolis, Indiana, and A. F. Hegelheimer, of J. P. Gordon Company, Columbus, Ohio.

"How Can Wholesaler Increase Sale of Automobile Accessories by Creative Salesmanship and How May Manufacturer Assist in Such Efforts?" by A. H. Burdick, of Standard Woven Fabric Company, Walpole, Massachusetts; J. H. Faw, of Walden Manufacturing Company, Worcester, Massachusetts, and W. O. Rutherford, of the B. F. Goodrich Company, Akron, Ohio.

"Is the Policy of Automobile Accessories Manufacturers such as to Justify the Enthusiastic Enlistment of the Hardware Jobber in the Stocking and Pushing of These Items? If Not, How Can the Manufacturers' Policy be Altered to Bring About These Results?"—E. H. Luetkemeyer, of Lockwood-Luetkemeyer-Henry Company, Cleveland, Ohio.

"Compensation of Special Accessory Salesmen."—C. C. Wagner, of Wagner Hardware Company, Mansfield, Ohio.

"What Can be Done to Improve Credit Conditions in the Automobile Accessories Business?"—D. B. Williams, of Williams Hardware Company, Clarksburg, West Virginia.

"By What Means Can the Tire Business be Placed on a More Satisfactory Basis "—H. T. Campbell, of Grey-Dudley Hardware Company, Nashville, Tennessee.

"Manufacturers of Tires and Tubes Have a Cash Discount Which Varies from that Commonly Used by the Hardware Jobbers. Would it be Better to Have a Uniform Discount?"—Frank Colladay Hardware Company, Hutchinson, Kansas.

"How Far is the Hardware Jobber Justified in Carrying a Line of Auto Accessories, and to What Channel Should He Look for the Outgo of These Commodities?"—P. L. Logan, of Logan-Gregg Hardware Company, Pittsburgh.

"How to Handle Automobile Suplies So That a Gross Profit Covering the Expense of Distribution and Reasonable Return on the Capital Invested May be Obtained?"—W. E. Foskett, of Albany Hardware & Iron Company, Albany, New York.

An evening session was held, at which these discussions took place.

"Shall Quantity Determine Prices?" led by E. H. Schwab, of the Silvex Company, South Bethlehem, Pennsylvania, and George Q. Hill, of Hill-Smith Metal Goods Company, Boston.

The Wednesday morning session was an open one and was attended by members of both associations and guests. Following the opening remarks of President A. J. Behler, of the National Hardware Association, and the singing of "God Bless Our Native Land," the Rev. D. D. Davies delivered an inspiring address on "The Life That Wins." Dr. Davies, who is pastor of the Bethlehem Presbyterian Church, Philadelphia, Pa., has been chaplain of the Atlantic City Convention for many years past. At the close of his address, Dr. Davies was presented with a handsome gold watch on behalf of the hardware interests of the United States.

R. H. Treman, of Treman, King & Co., Elmira, N.Y., Deputy Governor of the New York City Federal Reserve Bank, spoke on "Trade Acceptances," pointing out the advantages of the business world of the provisions in the Federal Reserve Law regarding these.

Brief addresses were delivered by the following:—

Charles J. Graham, President of the American Hardware Manufacturers' Association; John S. Dounan, Secretary of the Southern Hardware Jobbers' Association; Chas. T. Woodward, President National Retail Hardware Association; Joseph W. Dowling, President Canadian Wholesale Hardware Association; A. H. Chamberlain, Secretary American Iron, Steel and Heavy Hardware Association.

President Bihler's Address

President Bihler, of the National Hardware Association, in his address

discussed several important present-day problems. The address in part follows:

"Since our last convention we have passed through a remarkable period. Twelve months ago stocks of merchandise in the hands of the manufacturers were large, moving slowly and values on a low basis; to-day, jobbers are clamoring for goods and ofttimes paying premiums to get them. How long will it last—who knows?

The continuance of the world-wide war, now in its twenty-seventh month and the end apparently still far off, has brought volumes of business from foreign nations to the American manufacturer. With our mills and furnaces running full speed, and at exceedingly attractive prices, the purchasing power of the American public has reached a high point and as a result all mercantile lines show greatly increased activity.

Every indication points to a larger volume of business in 1916 than for many years, and the hardware trade is enjoying a good degree of prosperity; but we occasionally see evidence of our customers and even our own members, failing to get the full profit that they can and should have, based on the higher values now in effect on most everything in the hardware line."

Selling Prices Should Be Based on New Cost.

"Many jobbers have been issuing trade letters, that their customers may have up-to-date knowledge of market conditions. Such work is commendable, and with the information always obtainable from the traveling salesman and the trade press the retailer can keep himself well posted, and he should take full advantage of the opportunities afforded by the present market.

"Values to-day are high—on many lines abnormally so—but as long as the foreign demand continues so strong and active, I see no hope of lower prices to the domestic trade.

"That a change will come, we all know; and prudence suggests that any profit above normal be retained in the business or conserved and be treated as a contingent asset which will prove helpful when we face a period of readjustment.

"With increased values, there is not a relative increase in profit. We are confronted with a greater expense of doing business. The wage scale of employees has been increased. Our freight charges are heavier, while embargoes have forced many shipments by express, adding greatly to their cost. Taxes and general expense also exceed those of previous years.

"We should not let the present activity carry away our good judgment. Your investment is from twenty to forty per cent. greater than a year ago, and your credit risks are heavier than for many years. The expense account needs looking after just as much as ever; and while your apparent profit may be a little larger than in former years, your stock of merchandise may be subject to a sharp depreciation.

Extreme care and sound judgment is necessary in determining plans for the future.

Price Maintenance Sleeping.

"'Not dead, but sleeping,' is the present status of the Stephens-Ashurst Bill, giving manufacturers the legal right to fix resale prices on their product. More important legislation and political diplomacy have apparently sidetracked the earnest efforts of merchants and manufacturers to prevent continued price-cutting on patented or trademarked articles.

"During the past year, the Stephens Bill has grown in favor and has strong support, not only from the business world, but also from our representatives in Washington. The hardware trade appears to be strongly in favor of this or similar legislation, and we should continue to actively support all efforts which tend to improve the standard of merchandise."

Trading Stamps Dying Out.

"Thanks to the publicity of the trade press and the sound judgment of our membership, trading stamps, coupons, etc., packed with articles of hardware, have almost entirely disappeared. It would seem that such schemes are on the wane, and during the past year have been abandoned by many large merchants.

"A significant fact is that the stock of one company engaged in such trade has been offered at 85 cents per share, while a year ago it was being sold at $3.50.

"Let us continue our policy of handling goods 'sold on merit.' The stamp craze has seen its best days, and it has no place in the hardware field."

Auto Accessory Branch Growing.

"This branch is still in its infancy, but growing in numbers and influence.

"The business is one of great magnitude and will continue to grow, for auto supplies are now generally recognized as a part of the stock of the modern hardware house.

Changing Cash Discount.

"A few manufacturers after years of success in their chosen field, have recently seen fit to change their terms of payment, reducing the ten-day discount from 2 per cent. to 1 per cent.

"This association has frequently recorded itself as being in favor of a continuance of those terms so long in force by the hardware trade, namely, sixty days net, or 2 per cent. cash for ten-day payment, and we feel that any effort towards reducing that premium for prompt payment is unwise and would bring a direct loss to the jobber."

Address of Manufacturers' President

President Graham, of the American Hardware Manufacturers' Association, in his address, referred to the continued prosperity of the United States. He urged all branches of the trade to take now the profits to which they are entitled, in order that they may be enabled to withstand the loss incident to the readjustment. President Graham said in part:—

"Since I was honored a year ago by election to the presidency of this great organization, twelve of the most remarkable months in the world's history have passed—each of wonderful import in itself and taken together they have produced a year which will go down in history as one which has done more in laying the foundation of our commercial supremacy than any of its predecessors. In fact, you might say that 1916 will prove to be the very cornerstone of the great business structure now in process of development.

"There have been many factors in bringing it to its present state, the most potent of which is the great conflict still raging in Europe with no sign of abatement, and which seems no nearer a conclusion than it did two years ago. The devastation created there and the untold losses, both as to lives and property, are beyond our power of comprehension.

"This abnormal prosperity is creating a condition with us which will require a great readjustment of our ideas along practically all lines that make up our present business methods, and will make necessary a complete re-education, as it were, particularly from the standpoint of values.

"We have heard a great deal of discussion in the past few years relating to the 'high cost of living,' and the present administration seemed to feel, four years ago, that they had discovered the cause of it, and would have the power to produce the remedy; but their experience goes to show how little is the power of mankind, and how all of our destinies are regulated by an unseen hand stronger by far than any of us can conceive.

High Prices to Prevail for Long Period.

"I do not wish to enlarge on the increase in the cost of living, but I wish to refer particularly to the increased value of all commodities and to the fact that it will be necessary for us to readjust ourselves to a point where we will become accustomed to a higher plane of values than we have had for a great many years, and where the paying of higher prices for various products will become as deep-seated a habit as the lower priced period developed.

"Value is regulated, at least in all competitive lines, almost entirely by the law of supply and demand; when the demand is in excess of the supply, higher values prevail, and, from present indications, this condition will continue to exist in the United States for a period extending from one to five years more—the latter being the privately expressed opinion of some of the greatest leaders we have, both in business and finance.

"In my address at Birmingham six months ago, I made the statement that the famine in all lines would become more acute as long as the war lasts, and present conditions will bear out that statement, as we are now in or facing a car famine, a pig iron famine, a coal famine and a steel famine; I do not hesitate to predict $30 pig iron and $25 scrap before our next semi-annual convention, and it only remains to be seen what attitude the steel producers will assume as to what the price of steel will be, as it is only a question of asking.

Manufacturers Have to Plan Ahead.

"The car shortage is beginning to reach alarming proportions. This produces just one result: The railroads must buy and buy heavily if they expect to handle the enormous traffic offered, and they are coming into the market stronger now than at any time for a number of years. This demand on top of the present congested condition of our mills, will create a condition unprecedented in the history of American manufacture—our productive capacity in iron and steel and kindred lines will be sold out for a year to eighteen months ahead.

"The shortage of coal is caused by a shortage of cars and labor and it is a question as to how serious it may become.

"The nation's wealth is increasing enormously. Our balance of trade is fabulous and far beyond anything ever contemplated by even those who are chronically optimistic. All of this will create in time what might be called a very unhealthy condition. All manufacturers, excepting those who produce our raw material, are compelled, if they have any idea of operating on an efficient and economical basis, to plan much further ahead than ever before and to attempt to carry a much larger stock of whatever materials they may use than is customary; consequently, when the reaction comes, whether it be in one or five years, they cannot help but have a large quantity of high-priced material on hand. This applies also to our friends, the jobbers, and some arrangement should be made by all to see that their present operating profit absorbs the enormous loss they may be up against when that time comes.

Profits Count on Sales Only.

"This can be done by keeping inventory values always on the lowest priced basis, so that regardless of how great might be the reaction, you would not show a loss on your stock; in other words, never allow your books to show a profit on your inventory—a profit is never certain until the material is shipped, and your money in the bank. How comfortable can the manufacturer or the jobber feel who knows he has a large unseen sinking fund in his material in the yards or on the shelves?

A Long Period of High Prices.

"This present era of prosperity was created originally by the demand from abroad chiefly for munitions, food products and all articles used by the armies and navies of the contending nations. This produced a domestic demand for everything that goes into such production as well as to largely increase the demand for transportation facilities. On top of this comes the dewand for everything used in the world in all lines, as our great, heretofore, competitive manufacturing nations, England, France, Belgium and Germany, are confining their manufacturing almost exclusively to the production of war materials, and even after the war is over, it will take a long time for them to reorganize and get back into their regular pursuits.

"What is the answer? The United States is being called at present and will be called

upon for a long time to come to supply the entire world with its manufactured products, and the entire transportation system of the universe is practically dependent on our ability to supply. We are increasing our capacity in all lines as rapidly as possible, but not fast enough to keep pace with the demand so unexpectedly thrust upon us.

"So be prepared, gentlemen, for a long period of high prices; study the future as never before, and, if you are wise, as J. P. Morgan once said, 'Don't go short on the United States of America.'

"Another factor of paramount importance in the present situation is the growing scarcity of labor. This will be a great hindrance in our rapid development and do more to retard our productive capacity than any other one item."

As in previous years there were several popular entertainment features, including a theatre party.

On Friday, the Manufacturers elected the following officers:—

President—Fayette R. Plumb, of Fayette R. Plumb, Inc., Philadelphia.

First Vice-president—Samuel D. Latty, of the Kirk-Latty Manufacturing Company, Cleveland, Ohio.

Second Vice-president—A. H. Dillon, of Youngstown Sheet and Tube Company, Youngstown, Ohio.

Third Vice-president — Frank E. Gould, of George Bishop and Company, Lawrenceburg, Indiana.

Executive Committee—Three years, Frederick H. Payne, of the Greenfield Tap and Die Corporation, Greenfield, Massachusetts; D. A. Merriman, of the American Steel and Wire Company, Chicago; T. C. Montgomery, of Stevens Arms Company, Chicopee Falls, Mass. Two years, Charles B. Chancellor and Edward S. Jackson.

Some Possible Effects the End of the War Will Have Upon Conditions in the Metal Markets

Address by Charles S. Trench, President, *American Metal Market*, at the 22nd Annual Convention of the National Association of the United States, at Atlantic City, October 19, 1916.

I HAVE been asked to address you on the subject of: "Some Possible Effects that the End of the War will have upon conditions in the Metal Markets."

It seems to me that in discussing this question, one is at a considerable disadvantage, for the reason that the war is far from coming to an end, and conclusions that might seem justified and reasonable to-day, as to what is to occur in the metal trade after the establishment of peace, may be completely changed by what may happen in the meantime. I am among those who believe the end of the war is far from being in sight. In the year or more that may elapse, the developments in the general economic business situation, in the rate of production and consumption and values of metals, may be so different from what they are to-day, that peace at that time may be accompanied by developments that would seem to be almost impossible now. In other words, one has in a great part to assume a knowledge of what is to happen in the meanwhile; how long the war is to last; whether we are to continue from being involved; who are to be the victors; how overwhelming the victory is to be; how much greater is to be the destruction of property and capital; how much greater the exhaustion, and therefore in consequence how much longer the recovery by economy. Furthermore, what are to be the new tariffs and regulations to be imposed by the Allies in the preferential schemes for each other to the disadvantage of their enemies and in part to the neutrals; what barriers will neutral countries like ourselves have to overcome in order to get our iron, steel, copper, lead and spelter into the countries that have been taking them in free, not to speak of our goods manufactured from these commodities. All these are questions no one can answer to-day.

The discussion, however, is not as hopeless as it would appear on the surface. There are some things of which we are assured, some facts that have been driven home by the experience of two years of war, some developments that have taken place, and of these I intend to remind you, believing that they contain in great part ground on which to build an opinion regarding after-war conditions and prices. Also that by keeping them in mind and not allowing temporary developments in the meanwhile to obliterate or distort them, we will be greatly helped in forming an opinion as to what to expect, and in preparing to meet the change when it comes.

Peace Will Bring Changes.

Dismiss from your mind any ideas that we are going to gradually drift from this world war into peace without any remarkable changes. The price of commodities, the condition of the labor market, the demand for raw material, the profits of industry, the supply of money and almost every economic feature will be affected by the ending of the war. Prosperity will continue in America, but it will not be of the hot-house brand created by the war. I am inclined to agree with a great many of the statements made by Mr. Hughes, but I can't agree in his statement last Saturday that our present prosperity is built on sand. It has not been built on paper profits but on solid cash. We have accumulated a stock of gold estimated at $2,625,000,000. We have bought back a large portion of the securities issued on our properties which before the war were held abroad; we have made enormous loans to Europe; we have accumulated in two years more real wealth and capital than was ever before accumulated by any nation in a decade. From a debtor nation we have become a creditor nation. True, we may have accumulated with it some unsound features that will bother us in the future, but the profits and prosperity of the past two years have established our business and economic situation not on sand, but on a rock. Our high profits and prosperity may cease with the war, but it will take many years to dissipate the wealth we have accumulated, if ever.

Taking for granted, what I think is a reasonable view, that we will not become involved in the war, that it is to last another year, that our prosperity is, therefore, certain to increase meahwhile every day, we find:

1st—That we will face the change when it comes with an overflowing pocket-book. I need not say what that will mean. The curtailment of war orders will not create bankrupt competition. The rich and solvent producer and jobber is the one who can and does carry stocks over a crisis, and who when necessary is able to curtail his sales and production. This is one reason why I do not hold the view of a sudden and sensational collapse in prices with peace.

2nd—The advance in the price of iron, steel, copper and lead and their commodities has not been the result of speculation. If we had wanted to speculate, the control the producer has held, in his policy of selling virtually only to consumers and jobbers for their known requirements, has made speculation impossible in these metals. There has been an element of speculation in spelter and antimony, which carried prices in the former to 27c. a pound and in the latter to 45c. a pound, but the speculators have been heavily hit, and prices are down again to 10c. for spelter and 13c. for antimony. You will note I do not mention tin, as it is a peace metal and has been hurt both in the demand and price the world over by the war. The sensational advances in tin, as, for instance, in the first three days of the war when prices doubled, were the effect of panic fears regarding transportation and British embargo regulations, and have faded away as quickly as they came up when found they were unjustified.

3rd—There has been a legitimate demand to take up almost every pound of iron, steel and metals we have produced—we have accumulated no surplus stocks.

4th—While the war lasts our home consumption by reason of our prosperity will continue, in fact increase, and not until the end of the war becomes certain will the demands on us from Europe fall off. We hear a great deal about England and the Allies arranging to make for themselves many of the commodities into which metals enter that we have been sending them, but they cannot except in the case of spelter increase their own supply of raw material, so no falling off in the demand for the pig metal is possible during the war. We may make and send them less manufactured goods like cartridges, shells, etc., but if so we will send them more of the raw material instead.

Our danger is that peace will find us with a production stimulated in excess of our own and Europe's peace requirements, and the enormous war demand suddenly cut off. Also with prices at abnormal levels and profits to producers, we are certain to see a decline in metal prices, but how radical and severe,

will depend on where prices are when peace becomes certain. My opinion is that there will be a partial adjustment in price prior to peace, and this is already taking place in spelter and antimony. Those metals, if any, that go up to the last lap unadjusted will be the ones that will fall most heavily in price.

The end of all modern wars has been to usher in a period of great business activity and speculation. We saw this after our Civil War, the Franco-Prussian War, the Russo-Japanese War, and in fact after every modern war. But this time I think it will be different. There has been nothing in the history of the world like the present war—the after affects will also be extraordinary. There will be fortunes made by the advance in the Government securities of the victors, but the exhaustion of all the warring countries will be so complete, that recovery will be slow, and only possible by intense economy, and the longer the war lasts, the greater the exhaustion, the slower the recovery. When a man is forced to economize he is a poor customer. The after-war problems Europe will have to contend with and solve will be enormous. Means must be found to repair their losses. The war has sounded the death knell to England's free trade policy. She must buy less and sell more than she has done in the past, because she has had to part largely with the foreign investments that brought in interest, dividends, rents, etc., also freight, etc., and which in the past served to offset the apparent balance of trade against her as shown in her imports and exports. At a meeting this winter in London of over one hundred boards of trade only one speaker was found to plead for the continuation of free trade and he was coughed down. Even Birmingham and Manchester, the home of free trade, voted for protection after the war. It may seem to some of us like turning the hands of the dial of international trade backwards, but the rest of Europe is determined to take a leaf out of the book of Germany's policy of national self sufficiency in trade and natural resources. Everything that can be produced at home will be encouraged and fostered by tariffs, making the nation as independent as possible of other countries. Europe may live again in the future as a happy family of nations, but each nation has learned a lesson by this war of the danger of dependence outside its borders, England especially. Where would England have been had her supplies been cut off from America through disagreement with us, or without the control of the sea? On the other hand Germany, after two years of war, and cut off entirely from imports and exports with the rest of the world, promises to go on for another year or more. I am not the only free trader by education and conviction who has had to acknowledge free trade is all right for an ideal world into which war never enters, but as things are constituted, protection no matter what it costs, if it results in lessening your dependence on those who may become an enemy, is the only safe policy.

The physical war is to be followed by a trade war. To repeat Europe must sell more than she buys in order to pay her debts. America will feel this more than any other country, since our properity has been fostered by England's free trade policy. As I said before we are to face a great change in foreign tariffs upwards. We will also have to compete with preferential tariffs among the Allies.

An important feature to be remembered is that the war demand for our metals whatever they have been will cease suddenly with assurance of peace. The Allies are not running from hand to mouth, they have accumulated stocks. Their eagerness to get them quickly and at any price—it was a life or death proposition—was the cause of the sensationally large order and advances in prices of the past. They have large stocks now. Any other course of action would be insane, for how did they know but at any time they might be cut off by trouble with us or that Congress might forbid war shipments or that their control of ocean transportation might be endangered if not stopped by submarine activity. Don't imagine this war demand we have had was all for immediate use. The Allies have prepared for contingencies. War is a great consumer of metals, but not as great as our exports have shown. Speaking with one of the largest manufacturers of brass cases for shells two weeks ago he told me that in spite of his enormous shipments this year he did not believe any of what he had shipped had been yet fired. A producer of shrapnel bullets (lead and antimony) told me this week that while he had to make enormous shipments in the next two months, he doubted if the material would be used if peace came in a year. I spent three months in England last winter trying to find out the situation and prospects on this and other matters. I came back astonished and impressed with a great many things and one of them was that England was playing "safety first" and taking no chances. She was arranging for all kinds of contingencies that might cut off her supplies, preparing for a long war and the necessary supplies to bring a certain successful conclusion irrespective of the cost. Should war end to-morrow not only has England made out of her civilians an army of five million men, but she has accumulated and is accumulating enormous war supplies. Every economic force is under the control of the Government, making and collecting the necessary supplies to save themselves, and they have collected an ammunition supply such as no country except Germany before the war ever got together. From a small room and three clerks the day Lloyd George took charge of the War Munition Department, there were three months ago over 20,000 clerks alone employed by his department keeping records, etc., of supplies, output, etc., and the week I left London the department took over in addition to the Metropole one of the largest hotels in the city for additional office room. Were any of you Englishmen living in England it would be a safe wager that you would be engaged in some activity that touches the supply of goods or ammunition for the Government, your garage perhaps used for something connected with the war with your wives and daughters helping in the operation. One ammunition plant in the north, extends for several miles and has become the largest plant of any kind in the world, where a year ago was farm land.

There is going to be a sensational collapse in the demand for metal from the Allies, unless peace is to be so incomplete that Europe after the war is to be a camp armed to the teeth for further trouble. My opinion is it will be a fight to a finish, and every lover of peace should wish it so. In no other way can the future peace of the world be assured. Believing this is the reason for my expectation of another year or more of war.

Immigration May Mean Lower Wages.

Another great change we will face will be in immigration to this country, which has been stopped by the war. Unless the European nations by statute control emigration there will be a flood of it to our shores after the war. True, it will mean increased consumption in this country, but it also will mean a great readjustment of our labor situation, and lower wages. When this comes it brings with its curtailed purchasing power of the wage earner, and is certain to be followed by decline in prices to make "the punishment fit the crime" as the Mikado says: "High wages always accompany prosperity," the opposite is also true of hard times. One of the most serious things for Europe is going to be the attitude of the millions of men when they return to peaceful pursuits. Will they have learned obedience and respect for authority, or will their attitude be "we have saved the country and will not go back to the wages and conditions of before the war." If the latter is their attitude we may not have as much to fear from European competition after the war as now seems likely.

After War Effects on Metals.

But the question that is undoubtedly uppermost in your minds is what will be the effect on metals after the war? If they will decline what is a fair supposition of how great will be that decline? To this I have to ask the question, what will be the prices of the various metals when peace negotiations begin which will absolutely result in end of the war? This no one can answer and, therefore, it can be seen, how at the present time, it is difficult to predict with any exactness. Is there to start in shortly a movement to discount the end of the war, which at present does not exist, by allowing stocks to run down and result in an empty future order book? Will this be so overdone that when peace comes it will be proved that after-war effects have been so overdiscounted that instead of a further decline with peace there follows an improvement for the reason stated? If normal prices are to rule in metals after the war, what are normal prices? How much above normal prices are we to-day? Here we have to turn to past performances, in other words, to statistics. I do not intend to bother you with figures. My organization is responsible for a compilation of, I think, about all the important statistics appertaining to iron, steel and metals, known to many of you as METAL STATISTICS, and there will never be a time when it will be more important to refresh our memory of production, consumption, prices, etc., that have ruled in the past, as in the period into which we are entering. The fact that the average price of the past 30 years up to the beginning of this year was

14.06c. for Copper
5.36c. for Spelter.
27.63c. for Tin.
4.25c. for Lead,

has very little bearing on the nominal value of these metals on account of the change in the relation of output to consumption in what we might call present times. But I do think that a comparison of the average prices of the two years before the war is of the greatest value. This comparison shows the following:

	1912-1913.	To-day.	% inc.
Tin	42.37½	41.00	*10
Copper (Elec.)..	16.00	27.75	80
Lead (St. L.)..	4.32	6.87½	59
Spelter (St. L.)	6.27	9.50	52
Antimony	7.53	13.00	73
Aluminum	23.00	65.00	181

*Decrease.

Unless before peace a radical adjustment takes place there must be some serious declines at that time in every metal except tin. It might be interesting to examine each metal separately.

Tin.

This metal is a peace metal and consequently has suffered in consumption in Europe and in price the world over. There has been an increase in deliveries to our consumers of nearly 20% in the current year as compared with the year prior to the war. A part of this has been caused by the fears of

interruption in obtaining supplies from abroad, which has led our consumers to adopt the policy of carrying large stocks, safety stocks, but the greater part of the increase has been by reason of increased consumption, the result of prosperous trade conditions in this country and especially in the tin plate trade through increased demand for our canned meats and other commodities. Consumers are not likely to take any chances while the war lasts and will continue to carry good stocks. The sensational advances in prices at times, caused by threatened ocean transportation by reason of submarines, and English Government regulations are not forgotten, but these advances were quickly lost when the fears were found unwarranted. The actual consumption with continued prosperity promises to remain large, in fact to increase. No stocks of manufactured goods have accumulated. The price of tin plates for the next six months has just been announced at 60% above that of a year ago and there is a rush to place season contracts and best authorities in the trade estimate the output of tin plates for 1917 will be quite an amount in excess of this year. The statistical position of tin is a strong one. Production is not increasing, and it is the common opinion that higher prices than those now ruling will rule over the next six months. When the war ends there will be a recovery in European consumption and the replenishing of stocks which are down to nothing in the continental countries, but against this there will be a disappearance of the fears in America about getting supplies, and the safety stocks which our consumers have been carrying will no longer be held, and if there were no other factors to be considered one might counterbalance the other. But tin has for years been the speculative counter of the London metal market, and by reason of British Government regulations, speculation has been non-existent during the war. In other metals it has been not only forbidden but absolutely made impossible by the British Government. With peace, speculation will revive in tin abroad. A London correspondent a few weeks ago wrote me: "Of course, we are unable, by Government orders, to trade in tin except on consumer's requirements, but I lick my chops at the thought of the revival of my business when peace comes.' The opinion is universal abroad that peace will increase the consumption of tin and make for great speculation and higher prices in the metal, and probably this will be found to be true. A contingency that is forgotten and which may advance prices is that an export duty may be levied on tin by England to help the additional revenue she will need to pay for the war. The wonder is it has not been done before. Supposing an export duty of 5c., 10c., or 20c. was placed by England on the metal, we would have to pay it. Nickel and tin are the only metals we seem unable to find among our mineral resources. There is no substitute for tin. Unlike other metals, the price has virtually no effect on consumption. If tin was at 15c. we would perhaps put more on our tin plates and make better solder and babbit metal, but of this I am not sure. If it was $1 per pound we would still have to use it for nearly every use to which it is put. Tin is one of the weakest points in America's economic self-sufficiency as a nation, and it has been truly said that the control of this metal is England's strongest economic weapon in case of disagreement with America. The effect of being cut off from tin would create sanitary troubles that would be terrible. I give it as my opinion that tin at present prices is on a safe basis and that after peace much higher prices are to be expected. It is well to remember that tin is the only metal selling to-day at less than the average price of two years before the war for as previously noted the price of tin is 10% lower while the price of other metals are 52% to 181% higher.

Copper.

There are those who predict that the peace demand for copper will offset the falling off in war demands—that Austria, Germany and some of the adjoining neutral countries will be completely bare of the metal and that there will be a rush to get supplies, and that it will apply not only to the raw material, but to the manufactured commodities many of which have been melted for war material and all of which have gone the length of the war without replenishment. There is some truth in this, and already large purchases are reported to have been made for German account to be delivered when the war ends. But against this must be placed the fact that when that time comes several of the countries will be on the verge of bankruptcy, and all of them staggering under an enormous indebtedness both private and governmental, which will require the practice of the strictest economy. It is inconceivable to imagine that Europeans would set in to replace their copper supplies at prices which are more than double normal and triple the cost of production. Even at a normal price copper is not a cheap metal, and for many purposes has a more economical substitute, and the thought that the Germans will immediately replace the copper roofs and gutters and cooking utensils and the hundred and one other articles that were thrown into the melting pot to furnish war munitions, is to my way of thinking ridiculous. Cheaper materials will be used not by choice but for economy. Then again Germany's large purchases for the years before the war were partly in preparation for the war, and will not be repeated, and partly to supply German's foreign trade which she has completely lost and may not readily regain. Another point to remember is that copper is a metal that is not destroyed in the using, and while this enormous consumption has been going on for war purposes, the copper so used has not all been lost, in fact a very large portion of the used shells and cartridges are being systematically collected, and the metal will be put to another use. The idea of these being saved and collected has been ridiculed by a prominent copper authority, but it is nevertheless a fact, and the style of trench warfare that has been conducted has made this possible. Men and guns have accupied the same positions for months at a time and it has not been a matter of exploring "no man's land" for an occasional cartridge shell, as my critic has suggested, but simply a case of recovering the piles of exploded shells and cartridges that accumulated in every trench and gun station. It may seem a small matter in the detail but we have little appreciation of what it amounts to in the whole. Shut off from the rest of the world and with a home production of less than one-tenth of the copper that the Allies have been receiving from us, Germany has undoubtedly recovered every pound that was recoverable.

At the end of the war there will be an immense stock of this scrap in Europe, and more than that the Allies will have on hand, and under contract, enormous supplies of copper both in a raw and semi-finished condition, because there will be no diminution in the Allied purchases or no decrease in their reserve stocks until peace is actually established, and I venture the opinion the supply then will be greater than it is to-day or at any other time in the past.

The increase in the production of refined copper was slower to come about than in any of the other metals, and while it to-day shows a gain of only about 25% over 1913 we will by next year have increased it another 25% and in a few months will have the facility of turning out more than 200,000,000 pounds of copper a month, or 2,400,000,000 pounds a year. Before the war our home consumption in only one year exceeded 800,000,000 pounds and with the loss in the war order business in this country, we would indeed have to enjoy extraordinarily prosperous conditions to use 1,000,000,000 pounds a year. The nominal exports before the war were less than 750,000,000 pounds yearly, so even if our foreign trade came back to us on the former basis, we would face an immense oversupply, or rather an immense over-supply of productive capacity. A point to be remembered is that this increase in production was accomplished without any pronounced increase in costs, and the costs of the principal producers to-day range from 7c. to 10c. with the general average slightly below 10c. You can see how much room there is for a decline before production costs are reached, or before the price reaches the level that producers were wont to consider a fair level for copper, viz., 15c. I do not expect to see the decline for months to come neither does the British Government, or they would not have contracted for 450,000,000 pounds for 1917 deliveries at 26c. But we cannot avoid a readjustment of prices later on, and with the first real indications that the war is coming to an end we will experience a contraction in the demand which will bring on an unsettled market until the industry is established in accordance with the altered conditions. As the production and sale of copper is controlled by comparatively few interests the market is not so quickly sensitive to trade developments, and it would be in line with past performances if the readjustment of the price of this metal is done more slowly and conservatively than in the case of other metals.

Spelter.

One of the greatest changes that has taken place in the metal industry by reason of the war has been in spelter. Before the war Europe produced more than double the quantity of spelter that was produced in this country, the figures for 1913 being 742,854 tons in Europe as against 346,676 tons in the United States, and three-quarters of the European production came from Germany and Belgium, the greater part of which was derived from the refining of Australian concentrates. Germany has collared these Australian concentrates by long time contracts, and through their syndicates they absolutely controlled the output and also the price of the metal in Europe. The exports of spelter from our country had never amounted to more than a few thousand tons a year, in fact during the five years preceding the war our total imports exceeded by a few hundred tons our total exports, and therefore we had virtually no say in the world's market for spelter which was completely under German control. When the war broke out England found herself in a helpless condition for although possessing these Australian concentrates she had smelting facilities for less than one-third of her ordinary consumption, to say nothing of the amounts required by France, Russia and Italy. Our country was immediately called upon to supply the Allies with their spelter requirements, and this huge demand not only for the raw material, but also for brass and brass products, and the excessively high prices which were paid, caused a phenomenal increase in the production here. The total number of American

retorts at the end of this year will be in the neighborhood of 220,000 as against 120,000 at the end of 1914, representing a theoretical increase in the output of 350,000 tons a year. Some authorities place it higher than that, and it has been stated by the U. S. Geological Survey that we will end this year with facilities to produce 900,000 tons of spelter a year, including the output of electrolytic zinc. This is two and one-half to three times the amount of our domestic consumption before the war. It is impossible to believe that we will produce at this rate any time during this year or next, but taking the present output of about 650,000 tons a year, and estimating the ordinary domestic consumption, outside of war supplies, at 350,000 tons it can be seen to what extent the industry is dependent on the war demand. Among this increase in production is the zinc smelting plant erected by the U. S. Steel Corporation, the largest individual consumer of spelter in the country, which removes this company from its dependence on the outside market for its supplies, and furthermore one or two other consuming interests are following their example on a smaller scale.

There is no need to discuss the price fluctuations which have taken place during the last two years, except to say that the advance in the first year of the war from 4¾c. to 26½c. represented the extent of the insufficiency of supplies which has since been corrected, for to-day's price of 9½c. does not mean so much a scarcity of metal, but rather the increased cost of production, which figures, on account of high labor and other reasons, ore, etc., about 8c. at the present time.

We face a most serious situation in the American spelter industry with the ending of the war, for while Germany will not resume the position she held before, as the Australian concentrators will never be allowed to go to her again, still an agreement has been entered into between the Governments of Great Britain and Australia by which the former agrees to take 45,000 tons of spelter and 100,000 tons of concentrates annually during the war and for ten years thereafter, and has put aside $2,500,000 towards erection of works, and it is only a question of time when provision will be made for the entire Australian production. Peace will not instantly deprive us of our export trade in spelter, but it will cause a serious falling off, and more important still will cause a heavy shrinkage in the demand from the brass trade in this country through the stoppage of war orders. A complete revision of the industry will take place when that comes, and there will have to be a reduction in operations in every direction, and smelters will be closed down that perhaps will never run again. As many smelting plants have paid for themselves several times over through the extraordinary profits of the last two years, this will not prove such a great hardship, but the real trouble will come through the readjustment of the work to the altered conditions. Costs will have to be reduced, both smelting and mining costs, which will be to some extent automatic through the lesser demand for labor and the lesser demand for ore, and the price of metal will decline as the costs decline, until we will probably reach a point that represents the extreme limit of the best equipped and most economical plants in the country. What that will be I do not dare to prophecy, but you can cut the present price in half and yet be only a little under what was considered a fair price for spelter several years ago.

Lead.

During the first year of the war, lead averaged only 1c. higher than the low price prevailing at the start, and as the market showed an inability to absorb more metal than was available, the production was increased less than 2% over what it was in 1914. This year, however, it has been an entirely different story, and with the average price 50% over normal, and to-day double what it was in October, 1914, there has been a steady increase in operations in order to take care of the larger consumption, both ordinary and for account of war material, and furthermore to supply the export demand in Europe and the Far East. Lead has not been affected so sensationally as copper and spelter and some of the other metals, but as the war demand is the basis for present prosperity just so will there have to be the same sort of a readjustment when the war ceases. There is little likelihood of any atempt to maintain the price of lead at a high level when it is shown that the demand is falling short of the supplies, and we have had illustrations of this both this year and last year when the price declined in one case from 7c. to 6c. and in the other from 7c. to 4½c. The fact that there is a protective tariff on lead of 25% ad valorem does not alter the case first, because it would not be good policy to forego our export trade which was commenced several months before the war started, and averages in the neighborhood of 75,000 to 100,000 tons a year, and secondly, because the lead market here is no longer controlled by one interest, but is established by the competition between half a dozen important producers. The laws of supply and demand control the price of lead in this country to a greater extent than ever before, and the discontinuance of the European Syndicate, which was under German domination, means that the same conditions will prevail in Europe. There is no possibility of the world's market being apportioned and divided along the lines of the old syndicate, and while the tariff will prevent our market from being made a dumping ground for foreign lead, it is not to be supposed that our prices will always be as high as the tariff permits. There again the question of our export trade comes in, for to continue our export business our market will have to stand on an even footing with other producing countries. Preferential tariffs on the part of England and the British Colonies may place us at a disadvantage with Australia, and we may get back to the point where we are only able to export lead produced in Mexico and smelted here in bond, but whatever it is, we can rest assured prices will be readjusted to meet the conditions which present themselves. Having had a smaller and more orderly advance than the other metals under discussion, it stands to reason that the reaction will also be more moderate and conservative. Lead can be produced and sold at a small profit for 4c. and the question whether it falls below that level when the war ends, will depend very largely on whether the prosperous conditions in this country are continued.

Antimony.

Antimony being a comparatively unimportant metal, in the sense that it is used in such small doses for all peaceful purposes, requires no detailed discussion. It is used for war munitions, particularly shrapnel, that has brought it into the limelight during the past two years, and the inability of the world to increase the output at the same rate as the impressed demand was the cause of the unexampled rise in prices. With the opening of the war an embargo was placed on antimony by England and we have had to depend on China and Japan for our supplies. In the early part of this year antimony was selling at 800% higher than when the war started, but it has since declined to 13c. as against an average price of about 7½c. for the half a dozen years before ending 1913. The production of antimony in the Far East has been more than doubled, and as there will be a large excess of supplies after the war, the price will inevitably decline to a level of around 5c. a pound.

Aluminum.

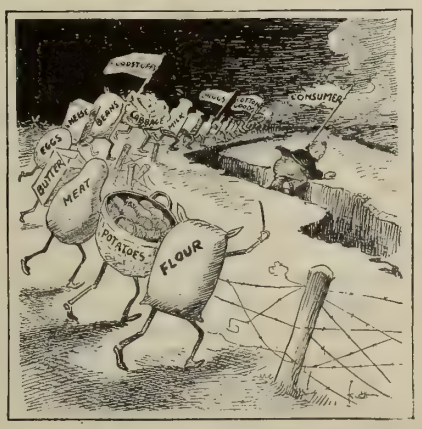
Aluminum in recent years has taken greater strides forward than any other metal, in fact we are only just beginning to realize its possibilities of developments, and the regret is that the production is not more generally distributed instead of being centered in a few hands. Anything that would tend to increase the competition and thereby cheapen the cost would be welcomed by the trade, but the abandonment of an important prospective independent operation in this country does not give much promise of this. Before the war the market here was influenced by the European market, and notwithstanding a duty of 2c. per pound considerable quantities were imported. Latterly, however, the movement has been reversed, and we have been supplying aluminum to the Allies at record prices, recent sales having been made as high as 66c. as against an average of 18½c. in the year 1914. That peace will cause a return to former prices is the most natural conclusion, because of the loss of the war demand and because the increased output will probably only be saleable at a price reasonable enough to encourage the use for those purposes for which a substitute can be used and is used when prices are high.

I am afraid I have exceeded my time, but just one word more. It is often said the world is in the melting pot now while the war is being waged. My idea is the world in social economic and business relations will be in the melting pot when peace comes, and the product that will be produced, in social, economic, trade developments will be wonderful and inspiring. I am enough of an optimist to believe that out of this great disaster there will come in Europe a new world of ideals and conduct. The awful suffering and bloodshed will not be in vain. The cancer of slavery had to be cut out in our Civil War with all the suffering it entailed, so likewise the cancer of militarism in Europe. The war has not only made Europe find their souls and develop the spiritual part of their nature, but there has been a tremendous quickening of intellect and ability and efficiency, and in that is the promise of her recovery. Let us see to it that we in America who have been wallowing in prosperity in the face of this awful suffering have not lost thereby those sterling virtues that come from adversity; that prosperity and ease has not atrophied our abilities and efficiency and enterprise. Great opportunities are before us, but they won't be thrown in our laps. We must go after them, seize and make them our own. In the race we start with tremendous advantages. Let it never be said that in the new world of endeavor now opening before us we were weighed in the balance and found wanting. And one last word, realizing all that Europe's suffering has brought to us in wealth let us determine to consecrate a part of it in "pouring oil and wine into the wounds and binding up the broken hearts," so that instead of feelings of resentment at our prosperity in face of their loss, our fellow world citizens may in the years to come thank God that one country at least was saved to lead in the work of restoration and equipped with the means to do so.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE



THE AEROPLANE flights of hardware prices continue with remarkable regularity—and the end is not yet in sight. This week advances have taken place on wire nails, fence staples, wire bale ties, O & A. wire, smooth steel wire, stove pipe wire, cut hay baling wire, wire rope clips, leather tap soles, top lifts, steel squares, ship augers, knife handle wrenches, brass butts, wall board, building paper, washing machines, cotton twines, sisal twine and lath yarn, padlocks, corn brooms, linseed oil. Present indications are that prices will go much higher. The demand for steel is as insistent as ever and inquiries are heard for huge quantities to be delivered in 1917. There is a scarcity of many hardware lines. Manufacturers are handicapped to a considerable extent by the labor situation. The railways are unable to handle freight promptly and there are serious congestions at some points. Business continues good despite the high prices prevailing. Collections generally are good. Merchants are buying for Christmas. There is a serious shortage of many lines of cutlery. Quotations on many lines of iron and steel goods are merely nominal.

MONTREAL MARKETS

MONTREAL, Oct. 26.—Not a symptom of easier tendencies as regards prices of hardware and metal products can be detected in any line. Business is reported tremendously good, especially in the country, but prices are beginning to look positively alarming. And the cry is still higher and higher. Iron and steel look distinctly stronger this week than ever before. Level-headed men in the business expect further big increases in many lines of iron and steel products. Probably pipe will show increased prices before spring, and perhaps much sooner. Other metals are correspondingly firm, and articles made from them show upward shadings in price. Wire is higher-priced this week, and wire nails are up, as predicted last week, with firmness in prospect. There is a distinct scarcity amounting to almost an absolute lack of Canada plates on the market, and charcoal tin and terne plates are scarce to the point of being all but undiscoverable. Only smallest possible stocks of these can be found.

Iron and Steel To Go Higher Yet

IRON AND STEEL.—With the announcement expected almost hourly that the Allies have closed an order with American producers for at least 600,000 tons of iron and steel in the form of munitions of war and materials for making munitions of war, the iron and steel market is firm to the strongest degree. That prices for all goods made of iron and steel will go higher still is almost a foregone conclusion now. Iron and steel mills in America have warned the manufacturers of hardware goods that they will not consider orders after January 1st, 1917, on present basis, and have been urging the trade to get in all orders as quickly as possible to secure any prospect at all of deliveries. There is bound to be a very marked shortage of iron and steel for domestic trade if the demands of the Allies for the metal are to be met, and met they will be. Altogether an anxious outlook for all interested in iron and steel products.

The Great Advance.
—Knott, in the Dallas News.

Reeled Machinery Steel Up

In line with the increasing firmness of the steel market, reeled machinery steel this week in Montreal shows increased price from $4.75 to $5.50 per 100 lbs.; only a beginning some authorities think, for the signs are ominous that steel is to cost more and more.

Spring Steel Also Up

Spring steel, formerly $4.50 per 100 lbs., is now quoted at $5.50, a dollar increase. Norway iron, formerly $7.50 per 100 lbs., is at $8 now, and firm.

Canada Plates Increase

Ordinary Canada plates are up 50c this week for 52 sheets, and are quoted at $5. All-bright are quoted at $6.75, instead of $6.30, for 52 sheets. These lines are particularly scarce.

Many Lines of Wire Up In Price

WIRE.—Several lines of wire are increased in price this week, some considerably. Stove pipe wire is up 5 per cent. No. 18 now costs $5.75, and No. 19 costs $6.25. Hay wire is also up. No. 13 is quoted at $4.15 to $4.20; No. 14 at $4.20 to $4.25; and No. 15 at $4.30 to $4.35. Cut hay wire prices are now as follows:—No. 9, $4.25; No. 10, $4.30; No. 11, $4.40; No. 12, $4.50; No. 13, $4.50; No. 13½, $4.60; No. 14, $4.75; and No. 15, $5, all plus 7½. Iron and steel wire is now $4.40 per 100 lbs. base. Copper wire, all lines, are now net list. Stove pipe wire is up 5 per cent. A line which has lain undisturbed during price changes for a long time is tinned picture wire. This line at last sees a 50 per cent. increase in price come to stay.

Wire Netting Warning

The trade is being warned to expect "a stiff increase in price in poultry wire netting, and wire screen cloth."

Nails Scarce and Wire Staples Go Up

NAILS.—A great scarcity of nails is becoming apparent. Simplex roofing nails are being sought for far and wide with small success. American roofing nails also are hard to find. All wire nails are up 15c per 100 lbs. on base,

and the price now is $4 base. The advance on wire nails has been predicted by HARDWARE AND METAL several times during the past few weeks. Cut nails are now $3.70 base.

Fence Staples Up.

Fence staples are increased in price this week. Bright are now $4.20 per 100 lbs., and galvanized $5.05 per 100 lbs.

Wire Rope Clips Up

Cincinnati wire rope clips are increased in price this week as follows:—¼-inch, 57c; 5-16-inch, 60c; ⅜-inch, 75c; ½-inch, $1.15; ⅝-inch, $1.65; ¾-inch, $2.40; ⅞-inch, $3, and 1-inch, $3.50.

Bale Ties Are Up

Bale ties show the firming tendency in increased prices this week:—No. 12 is $4.70; No. 13, $4.80; No. 13½, $4.85; No. 14, $4.95; No. 15, $5.20; and No. 16, $5.40.

Shelf Goods Show Further Increases

SHELF GOODS.—Tap soles and heels show a 10 per cent. advance over the old list, according to a new list just issued. These lines have increased in sympathy with the market for leather, which is very firm owing to Allied operations. Knife handle wrenches are quoted 20 per cent. off new list. Stillson's are 62½ now, and parts at 60 per cent. Ford's make ship augers are now 30 per cent. (formerly 40 per cent.). All lines of steel squares are up 10 per cent.

Hay Rakes Going Up

Hay rakes for next season are being quoted at prices 15c to 20c per dozen ahead of former prices. Globe files are now 65 per cent. off (formerly 65 and 10). Disston's files are 57½ per cent. off, instead of the former 60 per cent.

Brass Butts 50 Per Cent. Up

Brass butts, formerly quoted at 15 per cent., are now plus 33 1-3, a 50 per cent. increase.

Copper in Very Firm Market

COPPER.—Copper is in very strong market again this week, with prices increased since last week by half a cent a pound. The demand for this metal continues, and is increasing. Further munition orders will send values up again. This week's hardware lists show copper wire increased in price. All lines are now priced net list, no discount.

Lead and Tin Both Very Firm

LEAD, ZINC, TIN.—Both lead and tin are in exceedingly strong market at present. Lead is quoted at $9.75 to $10. Tin at $47.50 to $48. Zinc is firm at the levels quoted last week from 25c to 25½c. Both tinsmiths' and wiping solder are firmer, but prices quoted last week hold, viz., 30c for tinsmiths' and 28c for wiping solder. Antimony is firm at 16c.

Washing Machines 50 Per Cent. Off

As indicated in HARDWARE AND METAL last week, the new list on all lines of washing machines is subject to 50 per cent. off. Washing machines, due to scarcity of labor, and of some lines of materials also, are scarcer this year.

Wallboard and Paper Up

Increased prices are predicted in the trade for roofing papers. Spruce sheathing is now $6.25, instead of the former $5, and Hawkesbury sheeting is now $5.25 per 100 lbs.

Twines Go Higher

Cotton fishing twine is up a cent a pound. No. 6 is now 42½c; No. 9 is 37c; No. 12 is 36c; Nos. 15-36 are 35½c; Nos. 42-100 are quoted at 35c. Cotton wrapping twine, 3-ply, is now 35c per lb., and 4-ply, 38c.

TORONTO MARKETS

TORONTO, Oct. 20.—Business in all hardware lines has continued good during the week, with a continuation of advances in many lines. Last week six representatives of the wholesale hardware houses attended the Convention of the National Wholesale Hardware Association of the United States, at Atlantic City. "It was the consensus of opinion of those who attended that convention from Canada, after meeting and talking with wholesale hardware dealers and manufacturers in the United States, that present high prices will be maintained, with possible further advances between now and the first part of 1917," said the representative of one large Toronto concern to HARDWARE AND METAL. "There will still continue to be a serious shortage of goods as well."

WIRE NAILS UP 15c

Following the advance of 10c in the United States, wire nails have advanced 15c per 100 lbs., and are now quoted as shown below. This advance has been predicted by HARDWARE AND METAL on several occasions during the past few weeks. The new quotations follow:

F.o.b. London, Toronto, Hamilton and Milton ..... $3.95 base.

(Freight equalized on above points).

F.o.b. Montreal, Gananoque, Collingwood, and Owen Sound.... ... . $4.00 base.

(Freight equalized on above points).

F.o.b. Port Arthur, Fort William and Sault Ste Marie $4.00 base

Windsor and Walkerville, f.o.b. factory points, carload freight allowed .... $4.02½ base.

Other changes on staples, wire, etc., are given in regular reports.

Wire Nails Follow Cut Nails Upward

NAILS.—As stated in HARDWARE AND METAL for several weeks past that nails were due for an increase in price, wire nails during the past week advanced in price 15c per keg base. The new price is now $3.95. Last week cut nails advanced 30c per keg. The base price of cut nails is now $3.70 per 100 lbs. The advance in wire nails is in accordance with the firming in price of all wire products, and follows a 10c advance in the States. Wire has advanced in sympathy with other steel products, and there is little prospect of an easier tone in the market for some time to come.

Sisal Twine and Lath Yarn Advance

TWINE.—An advance of ½c per pound on sisal twine and lath yarn went into effect on Tuesday of this week. This makes the price 16c per pound in each instance. The advance has been due to the uncertainty of getting the fibre from the Province of Yucatan, in Mexico. The course of sisal twine during the present year has been steadily upward. On Jan. 24 it was quoted at 12½c, and on the 27th of the same month it was increased to 13c. On May 1 the price was advanced to 13½c, and on July 3 it went up another cent to 14½c, where it remained about three weeks, and was then quoted at 15½c. The latter figure has been the prevailing price until the rise in price this week. The market is now holding firm, with further advances not improbable. Sisal cord has been taking the place of jute wrapping twine by reason of its comparative cheapness. A sisal cord in the 550-yard length that sells for 18½c per pound is 2c per pound cheaper than the same yardage jute cord that sells for 20½c per pound. Another feature of the cordage market is the cancellation of prices on African hemp rope. This class of hemp is now going largely into the manufacture of hemp

twine used for tying express parcels. An embargo placed on the raw material some time ago greatly limits the available supply of the raw material.

All Wire Products Have Advanced 15c

WIRE.—Following an advance in the United States, wire products have led the way to still higher prices. Base sizes in wire are now quoted 15c above recent quotations, and are now selling at $4.40 per 100 pounds. Sharing in this advance in wire products is that of stovepipe wire, which in the No. 18 size is now quoted at $5.75, an advance of 45c. On the No. 19 the new price is $6.25, an advance of 50c over the former price.

Fence staples, hooks and O. and A. wire, bale ties have all advanced 15c per 100 lbs., and the new prices are shown in the current quotations.

Barb wire is now quoted locally at $4.20 per 100 pounds, and No. 9 galvanized wire at $3.85.

Cotton Twine Goes Still Higher in Price

TWINE.—Under the influence of the advancing market in the raw cotton there was an advance in cotton twine of 2½c on three-ply and 1c on four-ply. This makes the high quotations for cotton twine 38½c per pound for 3-ply and 41c for 4-ply. During the week the highest point in cotton since the American Civil War was reached when the May option sold for 20.04c. Spot cotton and options as far ahead as May are all well above the 19c level. Cotton is keeping time and advancing equally with flour and sugar and other commodities of a like nature.

Fence Staples Go Up 15c Per Keg

FENCE STAPLES.—In sympathy with the advance in wire products fence staples have also shared in the upward movement during the week, the selling price now being 15c in advance of last week's quotations. On bright staples the new quotation is $4.20 in 100-lb. kegs and the usual differential of 25c additional when put up in 25-lb. boxes. For galvanized fence staples the new quotation is $5.05 in 100-lb. kegs and 25c additional per 100 pounds when put up in 25-lb. boxes.

Padlocks Again Record an Advance

PADLOCKS.—Another advance has been recorded on all makes of American padlocks which amounts to 10 per cent. This advance is stated to be necessitated by the advancing costs of raw material and labour. The advance is in line with that of other lines of American shelf hardware that recently took effect.

Trimmers Also Go Up

An advance of 10 per cent. on all lines of Wiss trimmers was put into effect during the week. The line is quite an extensive one and the change in price affects all the various sizes.

Cutlery Expected to Be Higher by Spring

CUTLERY.—Cutlery lines are weekly sharing in the advances with other hardware lines. Much of the cutlery coming into Canada now is from the United States, although some of the Canadian importers of British goods are getting a few shipments they are much delayed. One dealer in cutlery stated it as his opinion that it would not be possible to buy any cutlery within six months for less than a 25 per cent. advance over the price of to-day. The advancing cost of steel that enters into the manufacture of these articles is not considered the biggest item. The problem of labor is the serious one that manufacturers have to surmount. It is not only becoming higher in price but is becoming scarcer with the good industrial conditions and the drain for men for war purposes.

Brooms Advance From 25c to 50c Per Dozen

BROOMS.—An advance on all lines of brooms recorded by one manufacturer provides for an advance on all lines of brooms from 25c to 50c per dozen. The cheapest broom on the list is now $4.15 per dozen for the standard 3-string make. Bamboo handled carpet brooms in the cheapest grade are now selling at $5.25 per dozen. The cheapest grade of the ordinary 4-string carpet broom is now $5.50 per dozen, whereas in the parlor carpet 4-string broom the lowest price quoted is $6 per dozen. For an average good broom with 4-strings the lowest grade is selling at $6.60. And so the prices run. For brooms with a corresponding larger number of strings the increase is proportionately greater. As stated in HARDWARE AND METAL last week the firmness in the broom market is due to the shortage of broom corn in the United States. Rather it is due to the fact that the usual stocks carried over from year to year were depleted this year and the trade has had to depend on the present year's growth of corn to meet the needs. Broom corn is now selling in the United States at $175 to $200 per ton. In ordinary years the cost is from $60 to $125 per ton. Laid down in Canada at Toronto the cost on $200 broom corn is in the neighborhood of $240 per ton.

New Lists Are Out on Washing Machines

WASHING MACHINES.—Manufacturers during the past week issued their new price lists on washing machines. As intimated for some weeks past in these columns the new prices provide for an increase price quite generally. The new discount provides for 50 per cent. off list on all lines. The lists will be found in the current quotations. The new prices are about 10 per cent. higher than those previously in effect.

Leather Tap Soles Go Up 10 Per Cent.

LEATHER SOLES.—In keeping with the recent advance in leather of from 8 to 10 per cent. the price of leather tap soles has been advanced during the week 10 per cent. Top lifts have also shared the same advance. Leather belting, however, as yet has not changed from the discounts for extra and standard as shown in the current quotations. Lace leather has not as yet been changed although the price in all leather goods is very firm.

Demand For Steel Insistent as Ever

The belief that there will be no improvement in the steel situation for at least eighteen months, if not longer, seems to be generally accepted. The mills are in a sold-up condition, and the demand shows no indication of falling off. The steel required for muitions alone will aggregate an enormous tonnage, while the amount of steel used for other purposes will be even greater. The revival in shipbuilding caused by the serious shortage of tonnage has already been partly responsible for what is practically a famine in steel plates, while steel rails are badly wanted, but cannot be obtained in sufficient quantities to satisfy the demand. With such conditions prevailing, prices will continue to advance, and the mills get further behind on deliveries.

New Iron and Steel Prices Not Yet Issued

IRON AND STEEL.—Manufactures of iron and steel have not yet issued price lists following their recent cancellation last week of all existing lists. Iron and steel dealers are looking for a substantial increase in the price of the various iron and steel products. It is expected the advance will be somewhere in the neighborhood of 15 cents. At one time in the upward careening of the iron and steel market this past summer it looked to some well-informed dealers that the top of the market had been reached. But instead of a decline an advance was registered at that time. Now the upward curve of the pendulum seems about to swing still higher.

Further indication of continued

Kyanize VARNISH

Feature this Cut-out in your window and tie up your store with our national advertising.

Every Kyanize Agent is invited to send for a new "Smiling Painter" cutout.

To make things easy there's a convenient coupon attached—for you to use.

As the centerpiece for an early Kyanize Window Display—or as a permanent individual store display—this newest Sales Help is bound to prove a trade-winner.

Even in this greatly reduced two-color reproduction you get an idea of what the life-size, handsomely lithographed original must be.

Just study that Painter's friendly smile. It's a standing invitation to "come-on-in-and-buy." It's irresistible. Put it to work for you. Use the convenient coupon below to send for your *"Smiling Painter"* cut-out—To-day.

This Smiling Painter Cutout FREE to Kyanize KY-AN-IZE Agents

The Kyanize Line is a Profit Mine

If you who read this Announcement are not a Kyanize Agent, we suggest you write us—provided there's no Kyanize Agent in your locality.

A Kyanize Exclusive Agency is a valuable business franchise—and growing more so every year.

With only one Agent to a territory—protected by our exclusive guarantee plan and backed by a nationally-advertised quality line—you become formidably entrenched against competition.

All the sales are yours. And we never stop trying to make these sales bigger and bigger for you.

The "Smiling Painter" cut-out offered above to Kyanize Agents is only a sample of what we do to make our Exclusive Agents the big varnish and paint men in their respective towns.

If you would like to share the big business that Kyanize Agents everywhere are enjoying, we suggest you write at once for a copy of the 1916-17 "Dealer's Mint of Selling Hints" and full particulars about the Kyanize Exclusive Agency Plan.

(Coupon requesting new "Smiling Painter" cut out)

Date .....

Boston Varnish Co.,
Everett Station, Boston, U.S.A.

Gentlemen,—Will you kindly send me one of your handsome new "Smiling Painter" cutouts (free to Kyanize Agents) with the understanding that I agree to display it prominently in my window for at least 10 days.

Kyanize VARNISH

Here's Another Kyanize KY-AN-IZE Business Getter

What! another? You said it, Mr. Man. But your surprise is pardonable.

Even the Boston Varnish Company can't live on its reputation.

When an outfit earns a name for being the "livest" in the industry it's got to live up to it.

That's what we're doing. This time, as you see, it's a wonderful new window trim—in colors.

Free to Kyanize KY-AN-IZE Agents

Note the bold swash of color in the wake of the big paint brush. Imagine the hundreds of pairs of eyes it will turn to your window. No doubt about it—it's got the attractiveness and punch that turn looks into sales.

It's the sort of a sales help every live Kyanize Dealer is looking for. Yours will be sent on request. Use the convenient coupon herewith.

TO LIVE VARNISH AND ENAMEL DEALERS EVERYWHERE: If there is no Kyanize Agent in your locality we invite you to write for a copy of the new, big "Dealers' Mint of Selling Hints" and full particulars about the Kyanize Exclusive Agency Plan.

strength in the steel situation in the U.S. is shown in the fact that agents of the Allied Governments are sounding the American market for steel to be delivered during the third quarter and second half of 1917. No definite tonnage has been named, but it will no doubt be as heavy as their requirements during the first half of next year. A few months ago 500,000 of bars, billets and forgings were purchased for delivery up to July, 1917. A feature of the market has been a tremendous demand for rails. It is said that the entire capacity of the rail mills has been sold through all of 1917. Prices on all steel products are very firm.

Pig Iron Up $1 Ton

A further advance of $1 per ton has been made on domestic pig iron, due, it is stated, to the increase in cost of iron ore and coke. Considerable strength, however, has recently developed in the market as a result of a better demand and improvement in the situation generally. The pig iron market in the U.S. is very active and prices very firm, with an upward tendency.

Ingot Metals Are More Active

Scrap Metals High

The situation in the market for scrap metals is improving, and prices are generally firm. There is a shortage of old rails and heavy melting steel, with the result that prices have advanced in both cases. Machine composition and composition turnings are higher, having advanced 1c per lb. Steel turnings are coming in freely, but the demand is not very heavy. The scarcity of copper for 1916 delivery has been a boon to scrap dealers, who are getting unusually high prices for old copper. Prices are shown in current quotations.

The demand for ingot metals has been more pronounced during the past week. There is a firm undertone to the market. The consumption of most metals, particularly copper, continues heavy, which is tending to keep prices up, notwithstanding the large increase in production.

Copper in Better Demand

After a short period of quietness, there has been a revival of the demand for copper and the market is strong. Owing to the possibility of higher prices for copper, consumers are coming into the market, and are covering for their requirements over the second quarter of 1917. Local quotations are nominal and unchanged at 30-31c per lb.

Tin Firm But Quiet

The market is firm but quiet and unchanged. A little more interest is being taken in tin, but business is still very quiet. Local quotations firm at 47c per pound.

Better Demand for Spelter

There is a better demand for spelter, including a number of inquiries from galvanizing interests. The market is firmer, but unchanged. Spelter is firm at 12c per pound.

Lead Still At High Level

The leading interest is still quoting 7c New York, while independents are pretty close to that figure. The market is dull but firm, and business is quiet, consumers being well covered for the time being. Reports from New York state that Canadian consumers have purchased about 2,500 tons of lead in the past week for prompt and November delivery at a base price of 6.85c to 6.90c New York. Local quotation 9¼c per pound.

Antimony Unchanged.

Canadian consumers have recently purchased considerable quantities of antimony in New York, which has strengthened the market there. Local quotations, however, are unchanged, at 18c per pound.

Aluminum Unchanged

Demand is less active, but the market holds steady, and prices are unchanged at 68c per lb.

Builders Hardware Quiet.

There is an unusually heavy demand for the rougher classes of builders' hardware such as are used by farmers for building and repair work. Such lines as barn door hangers and track, S and S hinges, latches, strap and tee hinges, etc., are in heavy demand. There is considerable building activity in country districts, but very little in the larger towns and cities. There is therefore a heavy demand for cheaper grades of builders' hardware, and a light demand for the high priced goods used on large city buildings.

LONDON MARKETS

LONDON, Ont., Oct. 26.—The advance in wire nails and wire products which has been predicted many times by HARDWARE AND METAL during the past two months has materialized and an advance of 15c per 100 lbs. has gone into effect. There have been many important price changes during the week. The new prices on washing machines are about 10 per cent. higher than previous quotations. Business locally continues good. Seasonable lines are moving well. Merchants are buying freely for Christmas trade and an effort will be made to get the Christmas business this year started earlier than usual. There is a scarcity of many hardware lines and deliveries are very slow. Manufacturers are handicapped by the labor shortage and the railways are congested with freight.

Advance of 15c on Nails and Wire

NAILS, WIRE, ETC.—With an advance of 15c per keg, wire nails are now quoted at $3.95 base. This advance will not come as a surprise to those who have been following the market reports closely for the past two months, as an advance has been freely predicted. The advance here follows an advance of 10c in the United States. There is a very good demand locally for nails. Cut nails remain firm at last weeks advanced price of $3.70 base.

Fence Staples Up 15c.

Fence staples are up 15c per keg and the new prices are as follows:—bright, kegs, $4.20 per 100 lbs.; bright 25 lb. boxes, $4.45 per 100 lbs.; Galvanized, kegs, $5.05 per 100 lbs.; 25 lb. boxes, $5.30 per 100 lbs.

Fence hooks galvanized in kegs are now quoted at $5.05 per 100 lbs. and $5.30 in. 25 lb. boxes.

O and A Wire Up 15c

Oiled and annealed wire has advanced 15c per 100 lbs. and the new price is $4.40 base. Net prices on popular sizes are per 100 lbs:—No. 10, $4.56; No. 11, $4.62; No. 12, $4.70; hay baling, No. 14, $4.80.

Stove Pipe Wire Up.

Stove pipe wire has also advanced further and is now quoted: No. 18, $5.75 per 100 lbs.; No. 19, $6.25 per 100 lbs.; small lots 7c lb.

Fence Wire Unchanged

Galvanized fence wire remains unchanged locally and is quoted as follows:—barb, $4.25 per 100 lbs.; No. 9 plain, $3.90 per 100 lbs.; No. 12 plain, $4.05 per 100 lbs.; No. 13 plain, $4.15 per 100 lbs.; No. 9 coil spring, $3.95 per 100 lbs.

Washing Machines Go Up About 10%

New list prices are out on washing machines and are shown in the current market quotations. The new discount is 50 per cent. off list and the advance amounts to about 10 per cent. all round.

Coton Twine Up 2c

Cotton twine has advanced 2c per lb. locally is now quoted, 3-ply, 37c lb.; 4-ply, 40c lb.

House Brooms Up

House brooms have advanced 50c dozen. The cheapest line has advanced $1 dozen and is now quoted at $5 doz. The reasons for the advances in broom prices were given in detail in last week's issue of HARDWARE AND METAL.

Tap Soles Go Up

Leather tap soles and top lifts have advanced about 10 per cent. on all grades during the week. All leather goods are very firm.

Linseed Oil Up Another 7 Cents

Linseed oil has advanced 7c per gallon and quotations now generally quoted are as follows:—

	Raw	Boiled
1 to 2 barrels	$1.12	$1.15
3 to 5 barrels	1.11	1.14
6 to 9 barrels	1.10	1.13

Turpentine Is Firm

Turpentine is firm locally following continued firmness in the primary markets. There is a fair demand at the following prices, single barrel lots 72c per Imp. gal.; 2 to 4 barrel lots, 71c per Imp. gal.; 5 gal. lots 79c per Imp. gal.

Glass Is Firm

Sheet glass is firm and is in good demand. Single diamond is quoted at 20 per cent. off; double diamond at 20 per cent. off; cut lights at 50-5 per cent. off.

Putty In Fair Demand

Putty is in fair demand and is firm and unchanged. Quotations are as follows:—Standard 100 lb. drums, $3.00; 25 lb. drum, $3.10 per 100 lbs.; Pure, 100 lb. drums, $3.70 per 100 lbs.; 25 lbs., $3.80 per 100 lbs.

White Lead Still Firm

White lead in oil remains firm at the present high level. Pure lead in oil is quoted in ton lots at $13.95 per 100 lbs. and $14.25 in less than tons.

Spring Booking Order

Retailers are booking freely for spring delivery and appear to be of the opinion that high prices will continue for another year at least if not longer. The following prices are now being quoted on spring goods:—Poultry netting 1 in. and 2 in. mesh, 30-10 per cent.; screen cloth (painted) 100 ft. rolls, $2.35 per 100 ft.; 50ft. rolls, $2.40 per 100 sq. ft. Spades and shovels, 1sts, 45 per cent.; 2nds, 40 per cent.; 4ths, 20-7½ per cent. Harvest tools, 40 per cent. Spring hinges No. 20, $11 gross. Cheap grained screen doors $11.35 dozen.

Stove Pipes and Elbows Moving

Stove pipes and elbows are moving freely. Light pattern elbows are quoted, 6 in., $1.33 doz.; 7 in., $1.50 doz.

Stove pipes are quoted per 100 lengths as follows:—

Common, 3 in., $8.72; 4 in., $10.19; 5 in., $10.19; 6 in., $10.19; 7 in., $11.28; Bright, 3 in,. $10.19; 4 in., $12.37; 5 in., $12.75; 6 in., $12.75; 7 in., $13.46.

Stove boards, wood lined are quoted at 50-10 per cent.; paper lined at 60 per cent.

Common wood side ash sifters are quoted at $1.75 doz. Weather-strip is moving well at the following prices:—wood and felt, 75 per cent. off; Frost King, $4.40 doz.

WINNIPEG MARKETS

WINNIPEG, Oct. 26.—"October flax 22¼c higher for the week." The foregoing announcement in the local papers of last Saturday will explain in some measure the exceptional advances which have been recorded in the price of linseed oil during the past few days. Two advances for the week have been given out—one of seven cents and the latest one, three cents—ten cents advance per gallon in one week. The unsettled state of the grain markets, due to damaging reports of crops and poor weather conditions for threshing, make it appear likely further advances may be expected before long. The increased price of linseed oil is almost sure to have a further effect on mixed paints, but undoubtedly manufacturers will hold off another week or two to see what turn the market takes. To-day's prices on linseed oil follow:—Raw, $1.21 per gal.; boiled, $1.24 per gal.—in barrel lots.

It is undoubtedly true that the advance in all grains will have its effect on the cost of various food products also. This is shown in advances made in the price of flour of 40c per barrel during the past few days—two 20c increases. The reason given is the unusually high figures now being paid for wheat.

Many Lines Advanced This Week

That the various lines throughout the hardware business are also being revised is evident in looking over figures submitted each week. The tendency seems ever upward, and embraces practically the entire line as handled by any hardware man. Since the outbreak of war, there have been some lines on which a revision has been evident every month or two, and sometimes oftener. Although some reductions have been made, they have usually followed sharp advances, and been succeeded in turn by further advances. This is evident in following the quotations on wrought iron pipe, galvanized sheets and various wire products.

The new quotations for the week are in practically all cases advances, and cover linseed oil, cotton rope, screen wire cloth, etc. Next to the sharp advance in linseed oil, the new price on screen wire cloth is perhaps most noticeable.

New prices on black screen wire cloth are $2.50 per hundred square feet, an increase of 50c over ruling prices for the season just past.

Cotton Rope Higher

An advance of 2½c per lb. has been made in the price of cotton rope. New quotations are on the following basis:—3-16 in., 35c per lb.; ¼ in. and over, 34c

Sash Cord Higher

Another important item is sash cord, on which new prices issued show the following:—No. 6, 44c lb.; No. 7, 43c lb.; Nos. 8, 9 and 10, 42c lb.

In sympathy with these two major lines the advances recorded in cotton clothes lines and candlewick packing might be expected; 48 ft. cotton clothes lines are now $1.92 per doz., and 60 ft. are $2.40. Candlewick packing now sells at 35c per lb.

Wire and Cut Nails Go Higher

Following the advance reported in Eastern markets in HARDWARE AND METAL last week, cut nails have advanced 20c per keg, making the Winnipeg price $4.40 per keg.

Wire Nails Go Up

Wire nails have advanced 15c per keg, as predicted by HARDWARE AND METAL, and are now quoted at $4 per keg base at Fort William and $4.40 per keg at Winnipeg.

Wire Goes Up

O. and A. wire, fence staples and hooks, and hay baling wire have advanced 15c per 100 lbs.

Mica at High Figure

New prices recently issued on mica bring this line to an exceptionally high figure. The prices shown on the following sizes will illustrate this point:—3 x 4, $11 per lb.; 4 x 4, $12 per lb.; 4 x 6, $13.25 per lb.

Cap and Set Screws Up

Further increased prices have been issued on cap and set screws, churn cork and hay knives, and the changes made are shown in the list below:—Iron cap screws, 40 per cent. discount; iron set screws, 45 per cent. discount; churn cork, 40c set; lightning hay knives, $8.75 doz. Germantown lamp black—¼ lb., 27c lb.: ½ lb., 21½c lb.; 1 lb., 17½c lb. Power churns—No. 1, $7.70 each; No. 2, $8.40 each; No. 3, $9.10 each; No. 4, $11.90 each; No. 5, $14 each.

Rope Remains Unchanged

The demand for all staple lines is very fair, and business continues good. Some sales of rope are being made, and no change in the market has been made. To-day's quotations are as follows:—

	Per lb. base.
Sisal	16½c
British Manila	19c
Pure Manila	24c
African hemp	19c

EVENTS IN THE TRADE

Fire Losses

Lindsay, Ont.—The plant of the Canadian Machine Telephone Co. was destroyed by fire.

London, Ont.—The plant of the W. A. Jenkins Mfg. Co., manufacturers of stock foods, was gutted by fire.

Personal

O. N. Parent, of the Canadian Yale & Towne, Ltd., St. Catharines, Ont., was a business vistor in Toronto during the week.

W. T. Earl, of Oneida Community, Ltd., Oneida, N.Y., and Niagara Falls, Ont., was a visitor in Toronto during the week.

F. W. Blythe, district manager of the Canadian Allis-Chalmers, Lt., at Winnipeg, has been promoted to the head office at Toronto.

J. F. S. Madden, formerly manager of the Canadian General Electric Co. at Winnipeg, has been promoted to the head office at Toronto.

Charles W. Fawcett, president of the Fawcett Foundry Co., Sackville, N.B., and also Mayor of that city, was in Montreal during the past week.

F. M. McCarthy has joined the travelling staff of the Merrick-Anderson Co., Winnipeg, and will represent them out of Saskatoon. J. E. McComb, recently with R. H. Williams, will represent the above house out of Regina.

Lieut. C. A. Page, sales manager for the Canadian Hart Wheels, Ltd., Hamilton, Ont., has received an appointment with the 164th Battalion C.E.F., and expects to go overseas shortly.

Col. Thomas Cantley, president Nova Scotia Steel & Coal Co., New Glasgow, N.S., has been elected a director of the Institute, to fill the vacancy caused by the death of Thomas J. Drummond.

R. F. Randolph, a steel expert, who has been in the employ of the Bethlehem Steel Co. for the past seven years, and was recently appointed general superintendent in charge of the steel plant by the Dominion Steel Corporation, has arrived in Sidney, N.S., and will immediately take up his new duties.

J. A. Cameron, formerly traveler for the Miller-Morse Hardware Co., is now with G. F. Stephens Co., paint manufacturers, Winnipeg, and will cover Southern Manitoba and Southern Saskatchewan. A. D. O'Brien, who formerly covered this territory, is now making his headquarters at Moose Jaw, and will cover the ground formerly in charge of G. H. Mackley, who is now with the McLaughlin Carriage Co., Winnipeg.

Among those who attended the Convention of the National Hardware Association of the United States and the American Hardware Manufacturers' Association at Atlantic City last week were: James Hardy, secretary of the Wholesale Hardware Association of Canada; T. B. Williamson, of H. S. Howland, Sons & Co., Toronto; S. H. Alexander, of Wood, Vallance & Co., Hamilton; J. W. Dowling, of Caverhill, Learmont & Co., Montreal; H. B. Seybold, of Starke, Seybold & Co., Montreal; W. J. Lawson, of Rice, Lewis & Co., Toronto; and Col. J. B. MacLean, publisher of HARDWARE AND METAL. A number of the Canadian manufacturers were also present.

New Firms Incorporated

The Maple Leaf Toy Co., capitalized at $40,000, to manufacture all kinds of toys, novelties, woodenwares, etc., has been incorporated, the head office to be situated at Toronto.

American Linseed Co. has been incorporated at Ottawa with a capital of $40,000 to operate elevators and to manufacture linseed oil, cake and other products at Winnipeg, Man.

Canada Gelatine Co. has been incorporated at Ottawa with a capital of $250,000 to manufacture glues, gelatines of all kinds and chemical fertilizers at Brantford, Ont. Incorporators: Lloyd Harris, of Brantford; George Upton and Jesse Lyman, of Boston, Mass.

The K. & S. Canadian Tires, Ltd., has been incorporated with capital of $250,000, to conduct the business of manufacturers of, dealers in, repairers and warehousing of automobiles, motor cars, motors, cycles, bicycles, and vehicles of all kinds. The head office of the company to be situated in Toronto.

Business Changes

Edmonton, Alberta.—McLean & Co., have sold their hardware store.

Blackie, Alberta.—C. J. Goulter is starting in the hardware business.

Settler, Alta.—Hansen & Nelson have started in the hardware business.

Bow Island, Alberta.—Austin Walsh has started in the hardware business.

Montreal, Que.—Dery & Frere, hardware merchants, dissolved partnership.

Tyvan, Saskatchewan.—Tyvan Hardware Company are commencing business.

Leduc, Alta.—Skinner & Dalgleish, Ltd., have been succeeded by C. W. Gaetz.

Delisle, Sask.:—H. E. Pickett, tinsmith, has been succeeded by H. E. Tufts.

Ribstone, Alta.—R. J. Wilde, dealer in hardware, has been succeeded by A. P. Reef.

Excel, Alberta.—Batton Bailey, hardware dealer, has been succeeded by C. R. Bishop.

Mozart, Sask.—W. C. Barker, hardware merchant, has been succeeded by T. Laxdal.

Engefeld, Sask.—B. M. Wacholtz (estate of) hardware stock, has been sold to Smith Bros.

Leduc, Alberta.—Skinner & Dalgleish, Ltd., harware, etc., have been succeeded by C. W. Gaetz.

Medicine Hat, Alta.—W. R. Finn, grocer, is reported to be adding hardware and harness.

High River, Alberta.—A. W. Kelly, hardware merchant, has been succeeded by M. F. Whimster.

Miami, Manitoba.—W. H. Campbell, hardware dealer, has been succeeded by Campbell & Botting.

Woodstock, N.B.—Clark & Johnston, hardware merchants, dissolved partnership and are closing their business.

Havelock, Ont.—H. F. G. Dreyer, formerly of Blind River, Ont., has taken over the business of Geo. Phillips & Son.

Kingston, Ont.—The McKelvey & Birch business has been separated. Hardware, stoves and tinsmith supplies will be continued by McKelvey & Son, Ltd. The plumbing and steamfitting department will be carried on by McKelvey & Birch, Ltd.

W. H. Stone Co., cor. Atlantic and Main streets, Winnipeg, who have hitherto run only a grocery store, have added several departments, including hardware and crockery. This is a branch of the other store at 622 Main street. The capacity of the store is being doubled.

Travellers Convene

The travellers of D. Ackland & Son, Winnipeg, were at headquarters last week for a two days' convention.

St. John, N.B. News

Private Charles A. Stevens, aged twenty-four, an employee of the Maritime Nail Co., Ltd., St. John, has been reported suffering from shell shock.

Private John S. Hourihan, formerly of St. John, who had been employed with the Ashdown Hardware Company, in Winnipeg, is suffering from a gunshot wound received at the front.

Private Fred Wolfe, aged thirty-three years, a former employee of T. McAvity & Sons, Ltd., St. John, N.B., has been killed in action in France. He is survived by his wife and six children.

Private H. Bonnevie, who before enlisting was employed with the Maritime Nail Works, St. John, N.B., was killed in action on September 26, while bringing in a wounded comrade. He was forty-one years of age and was unmarried.

Although only seventeen years of age, Private James Malcolm, a former emplayee of Emerson & Fisher, wholesale and retail hardware, St. John, has given his life for his country. He was killed in action while fighting with an infantry battalion in France.

Harold A. Allison, of Gandy & Allison, wholesale building hardware, St. John, N.B., was married on October 18. to Miss Thirza Gandy, daughter of Mrs. and the late Barton Gandy, the ceremony being performed in St. Paul's Church, St. John, by Rev. Canon Allan W. Daniel.

In French Hospital

Lieutenant Henry Stockwell Day, formerly a salesman with the N. B. Stark Company, of Montreal, and a son of M. H. Day, manager of the Consumers Cordage Company there, is in No. 8 General Hospital at Rouen, France, suffering from gunshot wounds in the leg and and a fractured femur.

Obituary

Sturgeon Falls, Ont.—The death occurred here suddenly of Geo. Levesque.

Toronto, Ont.—The death occurred here of Samuel May, President Dodge Mfg. Co., manufacturers of pulleys, etc.

Toronto, Ont.—The death, as a result of wounds, is reported of Capt. F. R. Newman, who prior to the beginning of the war was manager of the Toronto branch of the Canadian Fairbanks-Morse Co.

Havelock, Ont.—The death occurred here suddenly of Geo. Phillips, senior partner of Geo. Phillips & Sons. Mr. Phillips had a paralytic stroke about three years ago, and since then had been prevented from attending to business. Mr. Phillips had been in the hardware and tinsmithing business for 35 years, five years at Norwood and thirty years in Havelock. Mr. Phillips was one of the best known and oldest residents of the district.

Industrial Notes

Trenton, Ont.—The Benedict Co., manufacturers of silver-plated ware of Syracuse, N.Y., are fitting up the factory lately occupied by Lloyd & Sons, and will manufacture here for their Canadian trade.

Niagara Falls, Ont.—The Perfection Tire Co. are ready to go ahead with the erection of their factory. Satisfactory arrangements will be made to give the company power concessions promised by the municipality without violating Hydro rates or selling power below the price determined by the Commission.

Lieut.-Col. Strange Honored

As a mark of their appreciation of the great interest that he has always taken in the success of every department of the regiment, Lt.-Col. C. M. Strange, of Lewis Bros., Ltd., of Montreal, officer commanding the 58th Westmount Rifles, was presented with a handsome silver wrist watch by the members of the brass band of the unit.

Gurneys Move to Larger Premises

The Calgary branch of the Gurney Foundry Co., which recently came under the jurisdiction of the Winnipeg office, and is now known as the Gurney Northwest Foundry Co., Ltd., has moved into larger and more suitable premises, and is now located at the corner of 10th avenue and Second street east. This branch which controls the Alberta Territory, is now in charge of A. G. Richards, formerly of the Winnipeg staff.

Rolling Mills Running Again

Vancouver, B.C.—The re-opening of the plant of the Pacific Steel Products, Limited, at Bridgeport, on Lulu Island, near Eburne, has been followed by rapid development. The plant is now running steadily and is turning out about ten tons of iron and steel daily, and within the next sixty days, it is said, the capacity of the plant will have been trebled, and the output increased to at least thirty tons daily. The company is putting in an open hearth furnace for the making of billets from scrap iron. In addition to the rolling mills and furnaces, two large machines for turning out railroad and boat spikes, bolts, nuts, etc., are being installed, a line of manufacture which will be extended to other articles of a similar nature now shipped in from eastern foundries.

Wholesalers Represented at Atlantic City Convention

President J. W. Dowling, of the Canadian Wholesale Hardware Association, just returned from Atlantic City, U.S.A., where he attended the convention of the National Hardware Association of America, and the Hardware Manufacturers' Association, on Oct. 17, 18, and 19, reports that there were over a thousand representatives of the different jobbers and manufacturers present. At the different sessions of the convention, papers were read on the leading topics of most vital interest to the members of the association. These were all listened to and followed with the closest attention, and the results of the convention should be a better, and more general knowledge by all members, of conditions affecting the trade as they exist to-day, and should be a great assistance to their judgment in dealing with the problems necessarily arising from the very involved state of affairs in trade caused by the present war. The representatives of the Canadian Wholesale Hardware Association were cordially received and very heartily welcomed.

WEEKLY PAINT MARKETS

(Continued from page 48.)

higher figure than it is to-day. Pennsylvania crude oil is now quoted at $2.60 per barrel; $2.12 on Cabell; $2.10 on Mercer, Black, Newcastle and Corning; $1.95 on Somerset and 90c on Ragland. In the Eastern United States the refiners have not yet advanced the price of the refined product. Opinion seems to be divided there as to whether or not there will be an advance upward to follow the price of crude.

Demand for White Lead is Not Large

WHITE LEAD.—The demand for white lead in oil has not been heavy during the week. The market is firm at present quotations, due to the strength in the pig lead market. The high price has helped keep down the demand, stated one wholesaler, and this is a factor that militates against further advances, no matter how much they may be warranted. In ton lots white lead in oil is quoted at $13.95 per 100 pounds, and in small lots $14.25 per 100 pounds.

Big Demand for Shellac From Furniture Factories

SHELLAC.—The market in shellac has held steady during the week. There still continues a big demand for this commodity. Furniture factories are using large quantities in the manufacture of their products. All furniture factories have been exceptionally busy this year. Orders in many cases have been held up, due to the heavy sales of furniture. Furniture dealers report a big turnover this year, with inability to get certain lines in sufficient quantities.

WEEKLY PAINT DEPARTMENT

All Signs Point to High Prices

Brush Makers Are Filled Up With Business — Present Indications Point to Good Demand for Glass and a Firm Market—The Lead Situation.

SEVERAL of the reports presented at the 29th annual convention of the National Paint, Oil and Varnish Association, contain items of particular interest to the Canadian hardware and paint trade. Extracts from a complete report, which appeared in the *Paint, Oil and Drug Review*, are appended herewith:—

Report of British Committee.

The Bristles of the Chinese Hog, as before stated, is the dominating feature of Paint Brush Making, and it has in a most remarkable manner held up in its value when one considers the remarkable spectacle of England and America being able to take on the whole crop for the past two years, when formerly its use extended over the whole civilized world.

From the latest census reports obtainable we find that while nothing is available from foreign countries later than 1910, the following condition existed at that time:—

Germany had hogs	22,000,000
France " "	7,200,000
Austria " "	4,700,000
Hungary " "	5,500,000
Total	39,400,000

and from reliable sources comes the reports that these have been eaten, with practically nothing for seed.

It is true that hogs can be quickly grown, yet young pigs produce bristles of no value for brush making, as is shown in the case of the American hog, where they are killed at the age of 6 months. They produce no bristles available for paint brushes.

Your committee has not touched on the subject of bristles grown in Russia or Russian Poland, from where no reliable statistics are obtainable, yet it is one of the largest hog-growing districts in the world, and we are reliably informed that the hog has been simply obliterated in Russian Poland, where it was once in evidence everywhere.

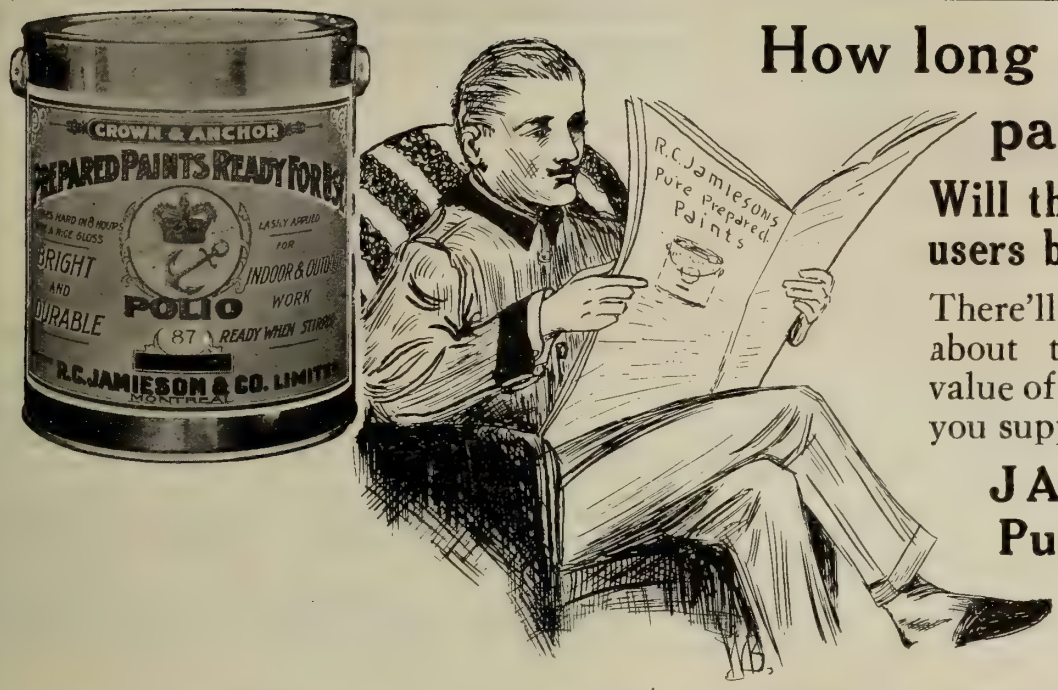
To sum up the situation in few words, the brush makers of to-day are filled to the limit with business. Labor is scarce. Russian bristles 20 per cent. higher, recent advance. French bristles unobtainable. China bristles holding firm and the future is entirely one of speculation. There is undoubtedly a great shortage of hogs in all European countries, and such shortage will some day be made good from the supply of China.

Report on Lead Products.

"It is everywhere recognized that margins on white lead are narrow to all classes of dealers, but when measured by the amount invested and the frequency with which it is turned over, the percentage of profit compares very favorably with goods of a less staple character. Small as the profit is, however, most of it is voluntarily sacrificed by dealers in making a leader of lead as a means of selling other materials. In other lines of trade in which there are staple articles similarly handled, efforts have been made to increase the dealer's profit and to secure uniform prices, but in no case have they been entirely successful. Their failure has been largely due to the fact that it has been found impossible to secure complete co-operation among manufacturers, or between them and the distributors. It must be borne in mind that any plan for price control adopted by a manufacturer must be operative in every state in which his goods are sold, and that where it applies to a staple commodity of which he has no monopoly he is powerless to enforce his price except through agreements with all competing manufacturers, as well as agreements between the dealers themselves, and between them and the manufacturers, to maintain uniform prices, both at first hands and on the resales. It would hardly be possible to secure comprehensive agreements of this character, but if it were, they would undoubtedly be declared in violation of existing laws.

"It is perfectly obvious that unless re-sale prices can be controlled in some manner, no plan for increasing the profits of distributors can succeed, but it does not appear to your committee that there is any method by which the manufacturer alone can exercise efficient control over re-sale prices on merchandise which is dealt in primarily under its generic name, and where the proprietary name is mainly the subject of more or less restricted local preferences.

"When the regulation of prices on certain commodities has been made a 'local issue,' it has been handled more successfully. Where dealers are united locally, and are really agreed upon such a policy, it has been found entirely practicable for them to maintain fairly uniform prices, and terms, on all leading lines of goods, and in such an effort they should meet no competition from the manufacturer.



The pig lead markets of the world have been unusually affected during the past year, and we have seen a very wide range in price fluctuations.

"The highest tonnage of pig lead for the United States was produced in 1915, when, according to the U. S. Geological Survey, approximately 540,000 tons were produced from domestic ore, and 40,000 tons from foreign ore and base bullion, or a total of 580,000 tons. The production for 1916 has undoubtedly increased, owing to high prices, not only of lead, but on account of the advance in the price of silver. Under such conditions low grade silver lead properties can be worked at a profit.

The large production has been taken care of by the demand, and to-day we find a market practically bare of stocks. The foreign demand is largely to account for this situation, although in some lines domestic consumption has called for more than the usual tonnage.

The price of pig lead since last November has ranged from an average of $5.15 for November last to an average of $6.34 for August, 1916. The average prices for the intervening months were as follows:—

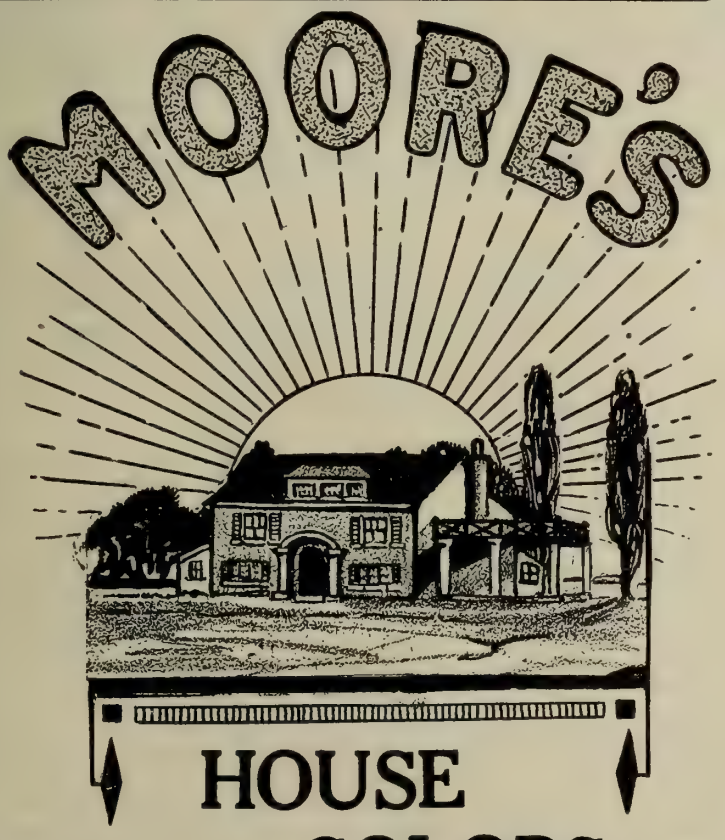
	Market price.
December, 1916	$5.34
January, 1916	5.93
February	6.25
March	7.45
April	7.70
May	7.50
June	7.03
July	6.52

How long will those paints last?

Will their value bring users back for more?

There'll be no question about the service and value of the line you sell if you supply

JAMIESON'S Pure Prepared Paints



because they are top-notch products in every respect. Every step in the making is guarded by the idea that the surest way of increasing sales is by keeping a high quality and holding down the price.

If interested, tear out this page and keep with letters to be answered.

"There were certain periods during the early spring when pig lead was almost unobtainable, and the price on fair lots on certain dates was as high as 8 cents per pound. We have passed through certain periods early in the year with violent fluctuations, and the best judges were seriously handicapped in their estimate of the market.

"This situation led to large losses on the part of lead pigment manufacturers who were compelled to deliver on existing low price contracts made in the fall and winter. We had then a repetition of the old commercial argument that finished products never advance in common with raw materials. Lead manufacturers are compelled to carry large stocks, and the turnover from metal to finished product is rarely accomplished under three to four months.

"The market for dry white lead (basic carbonate, and basic sulphate), has been a disappointment to manufacturers in point of tonnage and profit. The volume has been below that of 1915, and this has been caused partly because of bad weather conditions, and the necessary high price for finished products, which has restricted consumption.

"The high price of linseed oil, coupled with the advance in the cost of labor and all other help, strong advances in steel which affect steel packages, higher prices for acid, and all supplies entering into the manufacture of lead products will necessarily widen the margin between the metal and the finished products.

"The demand for red lead, litharge, and orange mineral, has been nearly normal, some industries showing large demands over any previous year.

"A considerable tonnage of export business has been offered during the past year, but manufacturers generally have not obligated themselves to foreign buyers at the expense of domestic trade.

"We look for a rather steady market in pig lead, with an advancing tendency for the balance of the year, and it is to be expected the price of finished products will remain correspondingly firm and steady."

Report on Window Glass.

"The past year has been a notable one for the industry, and from a manufacturing standpoint particularly gratifying for the following reasons:—

"There was more glass made than ever before.

"There was more glass sold.

"Prices advanced and kept advancing.

"Largest export business ever known."

"On September 1, 1915, the stocks in the hands of the manufacturers amounted to 1,300,000 boxes. The stocks in the hands of the manufacturers on September 1 of this year amounted to about 500,000 boxes and they have disposed to you jobbers and others in the United States about 8,600,000 boxes. How much of this remains in your individual stocks can be answered by yourselves.

"The cost of production advanced with the increased demand. Owing to the war, munition, machine and other manufacturing plants offered higher wages than they ever paid before and immediately labor became unrestful and discontented. Some material used in connection with the manufacture of window glass also arose on the wave of higher prices. It was therefore necessary for the manufacturers to get better prices for their product and in consequence they made several advances which aggregated about 30 per cent. above the prices current during the summer of 1915. We understand that the workmen will demand, and probably receive a substantial advance in wages for the coming fire, and which will probably cause a further advancement in selling prices.

"A majority of the factories went out of blast the latter part of May, and since that time a number of others have closed down. The output during the summer was so severely curtailed that it was almost impossible to secure certain qualities and sizes that your trade required. The factories will hardly resume operations until late in October or early November.

"While reports indicate that the jobbers are carrying more glass than they did a year ago, at the same time many stocks are becoming depleted of the more popular sizes and "A" quality. This is evident by the character of the inquiries received by the manufacturers, and these inquiries are more numerous than they were last summer and fall.

"In reviewing the reports of building permits for the past six months we are confronted with a healthy increase throughout the country. This should also guarantee for us an increased business for the balance of the year at least. Our window glass stocks should prove to be a good investment. What little the manufacturers have to offer is at prices decidedly higher than our cost. The volume of business is coming and it will be greater than ever. With a little sagacity in handling your inquiries and orders you can get volume and profit, too. It rests with you entirely whether you pick flowers or thistles.

Plate Glass.

"The demand for plate glass this year is the largest ever experienced in the history of the business, and in consequence we have an advancing market. This is a decided contrast to the conditions existing the previous year. This demand was born with the revival of business. Buildings of all kinds are springing up all over the country, the furniture trade has revived and with it the mirror business came back to life, the manufacture of automobiles has exceeded the fondest hopes of their prophets. These are the three great outlets for plate glass. In addition, the miscellaneous use of plate glass is increasing, such as coverings for desks, tables, dressers and other kinds of furniture.

"The foreign situation has been an important factor in the market. During last year, after the passage of the Underwood Tariff Bill, the importation of plate glass increased so materially as to demoralize the home market. The European war not only stopped this, but in closing down the foreign factories created an opportunity for the American manufacturers to market their glass abroad. Last year they exported approximately five million square feet and these figures will at least be equalled this year. A larger quantity could be exported if they were in a position to supply the demand.

"At the present time all available factories are in operation and production is as near maximum as labor conditions will permit. Like other manufacturing lines, the industry has been confronted with an increased cost due to the advance in the prices of some material used in the manufacture of plate glass, the higher wages paid to the workmen, and the shortage of labor. The manufacturers have had a boxing charge in effect for the past year and this should be taken into consideration by you in retailing your glass. At the present time the market is firm, and while retail prices have not advanced entirely in keeping with manufacturers' prices, due to the influence of cheap glass in the hands of distributors, yet this is rapidly decreasing, and higher retail prices must follow. Present indications point to a continued good demand and a firm market."

WORLD'S RECORD WHEAT CROP

In view of various claims of world's record wheat crops for large areas, the Crowfoot Farming Company, of Crowfoot, Alberta, submit a sworn statement of their results for the year 1915, which probably surpass all properly authenticated claims from other sources. From 1,356 acres, the Crowfoot Farming Co. received an average yield of 51 bushels, 56 1-3 pounds per acre of number one spring wheat, by actual selling weight—400 acres wheat averaged 59½ bushels per acre. These records were established in the Canadian Pacific Railway Irrigation Block in Southern Alberta.

If You Want the Highest Standard Quality Dry Lead

—the kind that is the best for every purpose for which a dry lead is used —the kind that is absolutely guaranteed for protecting all styles of metal construction that is subject to rust or corrosion,

Varnish selling is easy when the buyer sees Berry Brothers' label. It is one of the strongest selling arguments All products sold under it are true to description and can always be depended upon to run uniform.

The long record behind Berry Brothers' varnishes and enamels has earned and won the confidence of all buyers.

By pushing Berry Brothers' line you can build up a bigger varnish business.

LUXEBERRY WHITE ENAMEL—whitest white stays white. Makes a permanent snow-white finish in either dull or gloss effects.

LIQUID GRANITE—floor varnish. Makes a smooth, satiny finish. Lasting, waterproof, marproof, also adapted for bathrooms, window sills and casings, and all interior work where great durability is desired.

LUXEBERRY WOOD FINISH—for general interior work. Develops and preserves the grain of all woods, and makes a handsome and lasting finish. Rubs perfectly.

LUXEBERRY SPAR—for exterior work. Especially adapted for durability under extreme exposure—front doors, store fronts, marine work, etc. Makes a handsome finish and will not turn white under the severest conditions of wear.

We make a specially adapted varnish or enamel for every known use.

WEEKLY PAINT MARKETS

MONTREAL

Linseed Oil Goes Much Firmer Yet

LINSEED OIL.—With flax-seed at $2.50 per bushel, and going firmer still the market for linseed oil is very much firmer this week. Last week's figures are far behind. Flax seed is higher than it has been for years. Indeed men of long experience in the trade can not recall such conditions as are prevailing. Argentine reports continue to be thoroughly disappointing. They have had no rain there yet. North Western crops are also contributing to the firmness of the market, for snow coming earlier than usual hindered threshing, and stormy weather is still being reported. Crushers consider the outlook all towards greater firmness. Linseed oil is being quoted at $1.10 ex-car spot market for carload lots to the trade, and quotations by wholesalers to retail are much firmer, as follows:—

Linseed oil ..	Raw....	Boiled
1 to 4 bbls...	$1.10-$1.13	$1.12½-$1.16
5 to 9 bls....	$1.10-$1.11	$1.12½-$1.14

The firms quoting the lower prices, it will be noted, make no reduction for larger lots, the feeling of the market being rather to discourage large orders in linseed oil from the retail. One firm frankly admitted that they desired to keep every drop of linseed oil they had for their own use in view of market conditions. Another firm expressed considerable hopes of a reduction in prices, and declared that purchasing of linseed on their behalf was being done only on the smallest possible scale. Crushers reported a good demand, especially export demand for oil-cake, and suggested that this demand and the good prices ($44. to $45.) being paid for oilcake, helped to keep the price of linseed oil down to the levels maintaining. In the hardware trade orders were issued that no sales of linseed oil were to be made without consultation first as regards price changes, for prices in linseed oil were a matter of hours, and always on the firm trend.

Turpentine Quiet But Firm Market

TURPENTINE.—Reports from primary markets point to firmness as regards turpentine, but prices locally show no change from last week's average run of quotations. In one barrel lots turpentine is obtainable at from 67 to 70 cents per gallon. In two to four barrel lots it can be had from 66 to 69 cents, and in five to ten barrel orders from 65 to 68 cents. There were opinions on the market inclining towards the idea of higher priced turpentine before long.

White Lead in Oil is Steady

WHITE LEAD IN OIL.—Decided firmness in the market for lead, and unprecedented strength in the market for the oil make white lead in oil interesting in an especial degree at present, but so far the market in Montreal remains undisturbed. Prices are as quoted last week, namely $13.80 for ton lots, and $14.10 for orders of less than a ton.

Mixed Paints May Go Higher Still

MIXED PAINTS. — Quietness with yet a distinctly gathering demand for mixed paints for spring characterize the condition of things in the mixed paint business at present. All large manufacturers report a good deal of business coming along, and many firms are inclined to look forward to a good Spring trade with more paint in use than in previous years, certainly recent years. As regards mixed paints the difficulties of production are not lessened appreciably. Labor is not plentiful. Materials are costly and often scanty also. Lead is in firming market, and linseed oil is at fantastic values. While there is no increase being made in mixed paint prices for present, manufacturers are watching the markets keenly, and if linseed oil and other ingredients of paint go much higher there may be an actual increase in the prices of mixed paints within a short time. Certainly there will not be reduction in prices for many a long month.

TORONTO

Linseed Oil Goes Up 10c Per Gallon

LINSEED OIL.—There has been a general upward tendency on the price of linseed oil during the week; in some cases the advance represents 10c per gallon. The lowest quotation secured for linseed was $1.10, while the highest was $1.15. Flaxseed has advanced considerably during the week in the face of continued reports of damage to the Argentine crop and the covering of the flax crop in the North-West by snow. Flaxseed at the end of the week of October 14 was selling at $2.26¾ per bushel. One week later it was quoted at $2.49, an advance of 22¼c per bushel. During the present week the price is still soaring; on Wednesday the market closed at $2.53½ for October and $2.54 for November delivery. Oil cake is firm in price, and is quoted from $44 to $45 per ton. Quotations are as follows:—

	Raw.	Boiled.
1-3 barrels ..	$1.10-1.15	$1.12½-1.18
3-5 barrels ..	1.09-1.14	1.11½-1.17
6-9 barrels ..	1.08-1.13	1.10½-1.16

Turpentine Higher in Price in Some Quarters

TURPENTINE.—There has been a firming in the price of turpentine on the lowest quotations given last week. The top prices remain unchanged, but the lowest quotation for turpentine is now given at 67c in single barrel lots. This represents an advance of 1½c per gallon over the lowest quotation given last week. In the primary market turpentine has been in a fluctuating condition within narrow limits during the past week. At Savannah on Saturday last it was quoted at 45c per wine gallon. On Monday it held at the same figure, and on Tuesday eased off a ¼c. On Wednesday the market was reported firm, but a ¼c under the previous close at 44½c. Locally the demand has been light. Following is the range of prices:

	Per Imp. gal.
1-barrel lots	67c-72c
2 to 5 barrels	65½c-71c
6 to 9 barrels	64c ..
5-gallon	72c-79c

Gasoline Market Firm: Crude Oil Advances

GASOLINE.—The market in gasoline still holds very firm at 26½c per gallon. The firmness in the market is due to the constantly rising price of crude oil. The new quotations for crude oil bring the prices back to the high levels of last March, when gasoline was selling for a

(Continued on page 43.)

"Wet Paint"

EARLY next spring many signs of this import will appear in your locality. It is a reasonable certainty that the merchant responsible for most of them will be the merchant who handles a stock of paints and varnishes whose quality is undoubtedly superior and whose name is kept constantly before consumers by persistent, powerful advertising campaigns conducted by the manufacturers.

Now—when we are appointing agents in localities where we are not already represented—is the time for you to

Clinch the B-H Paint Agency

for your district and make sure that **your** "wet paint" signs will be in the majority next spring. You can assure the cream of the paint business of your district next Spring by making arrangements **now** for a B-H. agency. Write for full particulars.

The S-W Agency is Identified by this Trade Mark.

and it is recognized by paint users the world over as being the identifying mark of the best prepared paint and other finishes that can be produced.

S-W Agents are Profiting

by our International Advertising Campaign to Consumers, because they are the merchants who sell the *most* of the *most satisfactory* paint products.

If you are interested in a **better selling** line of paints and finishes let us tell you about our Exclusive Agency proposition.

Our Distributing Points

from coast to coast enable us to fill your orders quickly and eliminate part of the cost of translation and all the delays of long distance shipments.

SEND US A POSTAL CARD TO-DAY WITH YOUR NAME AND A QUESTION MARK ON IT.

28 gauge	4 60	4 00

Re Gauges of Sheets.

On account of it being practically impossible to secure galvanized sheets from England, owing to the war, American mills have decided that they will no longer roll the English gauges to meet this competition. However, they will continue to roll at 10¾ oz., which will be known as such or a 30 gauge, and will take the place of the former English 28 gauge.

SANITONE

The Washable Wall Paint

If you would capitalize the high price of wall paper you should recommend "Sanitone" to the painters and decorators in your town as the most convenient and economical material

To Replace Wall Coverings of all kinds

"Sanitone" permits of an almost unlimited range of pleasing tones and color effects. Whether flat or gloss finish is used it may be washed with soap and water. It does not mar easily, but stands up under the most severe treatment. Tell your customers about Sanitone and show them what beautiful effects can be produced for little money.

If you are not a C.P. Agent ask us for complete information and profit by our big 1917 plan.

The Allan Munro Color Co., Limited, Montreal

The popularity of your store depends mostly on the stock you carry. Talking of Paint, there is no better seller than Ramsay's and every can is a can of satisfaction. Since 1842 Ramsay's Paints and Varnishes have been made right and have proved their ability to **stay right.** Color and quality are fixed. Ramsay's complete line "is" complete, and that's the line of paint for you to carry if you would make yours the most popular store in town.

UNIVERNISH

FLEXIBLE AS SILK

It is hot-water proof, cold-water proof, salt-water proof, alcohol proof, alkali proof and acid proof.

It may be used anywhere, on everything that requires varnishing.

But it is especially adapted to the miscellaneous varnish demands of the general public and Housepainters.

You can buy it in small or large cans. Ask for our booklet.

SILKSTONE

(REGISTERED TRADE MARK)

FLAT WALL COLOURS

"Silkstone" is a business-builder—a producer of substantial profits — giver of universal satisfaction.

"Silkstone" can be washed with soap, without losing any of its beauty.

It is *sanitary* and *durable.*

Is more economical than distemper colours and can be used where distemper cannot.

Dries smooth as silk, hard as stone.

Send us a trial order and test its selling qualities.

Have we an agent in your town?

If not, write us for agency proposition.

OPEN HEARTH STEEL

COSTS LESS

than aluminum and zinc wash boards, is just as good and is more serviceable.

The All-Canadian
All-Wooden
Wash Boards

are the result of great scarcity and high price of zinc and aluminum—a price that has greatly handicapped washboard sales.

All-Canadian grown wood, Canadian-made nails, and by Canadian workmen—that's why it's all-Canadian.

The finest grained hardwood is used for rubbing surface.

Retails at 20c and leaves a **BETTER** profit.

Standard zinc, glass and enamel wash boards always on hand for prompt delivery, until notice to the contrary.

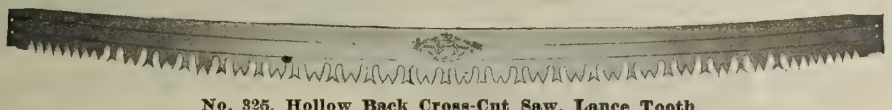
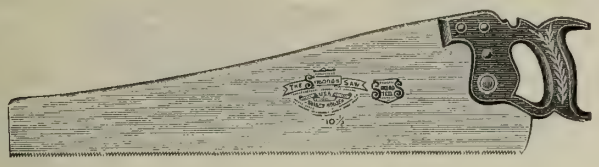
You should place your orders now for a stock of SIMONDS Crescent Ground Cross-Cut Saws



No. 13. Full Width Cross-Cut Saw.

No. 22. Full Width Cross-Cut Saw.

No. 315. Hollow Back Cross-Cut Saw, Champion Tooth.



No. 325. Hollow Back Cross-Cut Saw, Lance Tooth.

YOU can make no mistake when you do this as every logger or woodsman knows this make of saws and will always pay more for them for the simple reason that they enable him to do more work with a smaller amount of labor. He knows the better cutting quality of the saw will make it more than pay for itself. Select the styles you want from these pictures or write for our complete catalog and more information.

We also have a complete line of Hand Saws.

Place orders through your hardware wholesaler.

Can You Analyze A Brush?

Can you demonstrate a brush thoroughly and intelligently to a buyer? Can your salesmen? Do you and they know the perfection standards in bristles—their varieties—their adaptability for specific purposes—their shaping and their lengths? What about the binding of the bristles by ferrule or twine, or metal strip What about handles? their shape, weight, length, finish and balance? You will find the perfection of brush making in

MEAKINS BRUSHES

and you will get answers to many questions in our catalogue. The catalogue will inform you about brushes that you may not know are made. The more you know about brushes the more brushes you can sell—and the same thing in time about your salesmen.

Having our catalogue enables you to make many extra brush sales. Send for it.

BIG MARKET FOR BRUSHES

Will you let us say to you that there is a much larger market in every community than is generally perceived. We make a hundred or more different kinds and for example there are:

Meakins Brushes for Horse Stables and Carriage Cleaning.
" " " Garage and Automobile needs.
" " " Butchers, Barmen and Stovemakers.
" " " Walls, Radiators, Floors, Bannisters and Cornices.
" " " Kitchens, Parlors and Schools.
" " " Cream Separators, Gun Barrels and Bottles.

We do not suggest that you carry stocks or even samples of every variety of brush, but we do suggest that you have our catalogue, and familiarize yourself with our various brushes in order to be able to suggest the right brush to the right person for the right need.

Sell from our catalogue.

Just a last word: **MEAKINS BRUSHES** are **GOOD** brushes and our catalogue will tell you why. Our catalogue is valuable. Have you a copy?

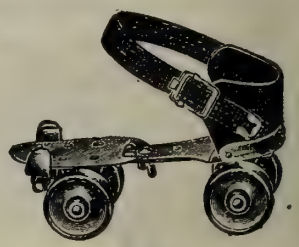
Addition to Electro Assortment



ON this page is shown an addition to Hardware and Metal's electro assortment for retail hardware dealers. With the cuts shown below the assortment now totals 219. These electros are supplied to hardwaremen at the small cost of twenty cents each. Cash with order. Sheets showing the whole assortment will be mailed on request. Since the introduction of this service by Hardware and Metal, orders have been received from all parts of Canada and many of the largest retail concerns in Canada are now using Hardware and Metal electros regularly in their newspaper and circular advertising. Many merchants in the small towns have also taken advantage of this service. Be sure and order by number.

KINDLY MENTION THIS PAPER WHEN ANSWERING ADVERTISEMENTS

If interested, tear out this page and keep with letters to be answered.

Condensed or "Want" Advertisements

There is always someone, somewhere, who is looking for just such a proposition as you have to offer—and it is more than likely that he is a hardwareman and a subscriber to HARDWARE AND METAL. Let an advertisement on this page bring you together.

RATES (payable in advance): 2 cents per word first insertion, 1c per word subsequent insertion. An additional charge of 5 cents for each insertion is made when Box Number is required. Each figure counts as one word.

SITUATIONS WANTED

THE "CHANGING TIME" IS GETTING near. There are many firms who have vacancies on their sales or office staffs to fill during the next few months. If you want to qualify for some of these vacancies, tell your story briefly in a Condensed Advertisement, and try in out in Hardware and Metal. A twenty-five word advertisement may land you a permanent position with splendid prospects.

HARDWAREMAN, 13 YEARS' RETAIL EXperience, desires better position, either retail, wholesale or travelling. Age 29, married, teetotaler. Apply Box 402, Hardware and Metal. (45)

AGENCIES WANTED

MANUFACTURERS AGENT WITH WIDE connection among retail and wholesale hardware trade, desires agency for good lines in Toronto district. Would not object to covering larger territory when necessary. Have own car for local work. George H. Carson, 60 Wilson Ave., Toronto. (45)

THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms, is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal, under this heading.

STORE EQUIPMENT FOR SALE

YOU MUST HAVE A LOT OF OLD FIXtures around the store which are no longer of any value to you, but would prove very useful to someone else in the hardware business. Find a purchaser for this equipment through an advertisement on Hardware and Metal's Condensed Ad. Page.

FIFTY DOLLARS TIED UP IN OLD FIXtures that you are no longer using, would make a lot of money for you if invested in stock and turned over three or four times a year. Get your money out, by selling the fixtures to one of Hardware and Metal's readers who may be looking for exactly what you have to offer.

HARDWARE WINDOW DRESSING—THIS is the first book ever written devoted exclusively to Hardware Display. There are 256 pages and over 200 illustrations with full working descriptions. It is the purpose of this book to illustrate and explain how hardware windows may be dressed to the best advantage—how they can be made to sell goods. It is not a theoretical work but a collection of specimens of the best work and ideas of the most expert window dressers in the world. These men have contributed their experience covering the many phases of hardware window display. This volume, therefore, represents the sum total of information on this subject presented as concisely as is consistent with clearness. By following the simple illustrated directions given in "Hardware Window Dressing" any clever clerk can put in good hardware displays at no cost whatever. Size 8 x 11 inches. Price $2.60 postpaid. MacLean Pub. Co., 143 University Ave., Toronto.

SITUATIONS VACANT

WANTED—GOOD HARDWARE MAN WITH at least ten years' experience; permanent position, eastern Ontario; interest in the business open for the right man. State age, experience and salary expected. Box 403, Hardware and Metal. (44)

BUSINESS CHANCES

$15000 — HARDWARE — ONE OF THE best in western Ontario; splendid stand; large town; owner up in years, retiring. John New.

LET JOHN NEW, 154 BAY STREET, TOronto, sell your business. (4)

HARDWARE AND FURNITURE BUSINESS for sale in one of the best towns in western Ontario; reason for selling, outside interests. Apply Box 401, Hardware and Metal. (44)

IF YOUR HARDWARE BUSINESS IS FOR sale, who is more likely to buy it than a hardware man, be he merchant, clerk, or traveller? It is only hardware men who read Hardware and Metal, and a condensed advertisement in this paper offering your business for sale, will put you in touch only with the people who will be most interested.

MISCELLANEOUS

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada. (tf)

ADDING TYPEWRITERS WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited. Room 314, Stair Building, Toronto.

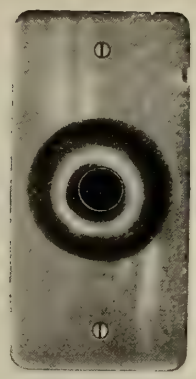
GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fenson Elevator Co., Toronto.

HARDWARE STORE BUSINESS METHODS —The authors of the articles in this book are for the most part practical and progressive hardware merchants. The embodiment in these articles of the experience of such able and enterprising men and the suggestiveness of the principles and maxims presented make this volume of infinite value to that trade. The 40 subjects discussed include: Rules and Regulations for the Hardware Store; Hardware Buyer; Good Methods in Stock Taking; Prices and Catalogues; Collecting Accounts; The Merchant and His Employees; Changing Business Conditions and How to Meet Them; Profit Figuring System; Starting in Business; Changing a Credit into a Cash Business, etc. 220 pages. Price $1.10, postage paid. MacLean Pub. Co., 143 University Ave., Toronto.

There's good Profit in

HEARTH FURNITURE



and an extra profit. For in selling hearth furniture — **Fire Irons, Andirons, Portable Baskets, Grate and Spark Guards**— —you are increasing turnover. That is, you are not merely replacing our line with another, but are **Creating Brand New Business.**

An extra strong, serviceable Wheelbarrow

for heavy hauling and hard service

Easy Running Light—Durable

When loaded and raised for wheeling the load is well balanced over the wheel and requires little effort in lifting, so that almost the entire exertion is utilized for moving the loaded barrow forward. The legs are framed on the truss principle and are bound by wrought iron shoes, so that nothing can become loosened by hard usage such as slipping over rough surfaces. The box is of good sound stock, the frame is oak, and the shoes and braces are wrought iron. The wheel is of steel.

Principaliy designed for the use of contractors. **Easy to sell.**
A sure satisfaction-giver.

The Schultz Bros. Co., Limited, Brantford, Ont.

Winning the Buyer's Favor

The best possible buyer is not made an actual buyer at a single step.

It is one thing to win the buyer's favor for an article and another to make adjustments incident to closing the sale. Winning the buyer's favor is the work of trade paper advertising.

Under ordinary conditions it should not be expected to do more.

To Investors

THOSE WHO, FROM TIME TO TIME, HAVE FUNDS REQUIRING INVESTMENT, MAY PURCHASE AT PAR

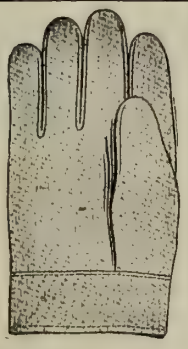
DOMINION OF CANADA DEBENTURE STOCK

IN SUMS OF $500 OR ANY MULTIPLE THEREOF.

Principal repayable 1st October, 1919.

Interest payable half-yearly, 1st April and 1st October by cheque (free of exchange at any chartered Bank in Canada) at the rate of five per cent per annum from the date of purchase.

Holders of this stock will have the privilege of surrendering at par and accrued interest, as the equivalent of cash, in payment of any allotment made under any future war loan issue in Canada other than an issue of Treasury Bills or other like short date security.



Proceeds of this stock are for war purposes only.

A commission of one-quarter of one per cent will be allowed to recognized bond and stock brokers on allotments made in respect of applications for this stock which bear their stamp.

For application forms apply to the Deputy Minister of Finance, Ottawa.

Cotton Gloves for furnace work

Right now our Cotton Gloves are in great demand. You can sell two or three pairs at a time to each customer, so low-priced and desirable are they; every pair sold makes a friend for all the

TAPATCO
REGISTERED BRAND TRADE MARK

Line of Cotton Gloves

These come in many styles—Gauntlet, knit wrist or band top; in heavy, medium or light weights; also leather tip, and leather face; and jersey gloves and mitts, in tan, slate, or oxford. The Tapatco Line has no real rival. These gloves meet a common need at a price everybody likes.

Order from your jobber.

THE AMERICAN PAD & TEXTILE CO.
CHATHAM, ONT.

Who is Your Customer?

THE finding, holding and multiplying of customers is your great business—probably your great problem. There's no royal road—no priceless route—to them. The plain way to find, interest and persuade them is the well-traveled way, the way of Public Advertising.

But the ideal medium—what is it?

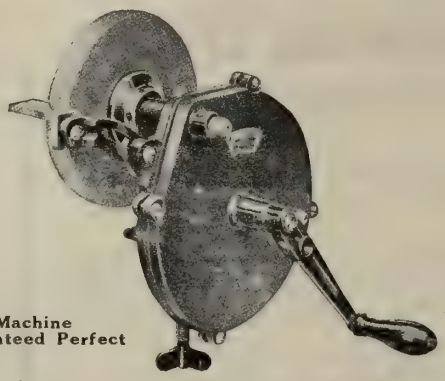
If you are seeking a single medium of potency, of prestige, of sufficient circulation, you will find it in

MACLEAN'S MAGAZINE

You know of this magazine, but do you know it through use?

It can't do everything, but it can do much. It can make your product, commodity or service known nationally—and this at small cost per annum.

N.B.—Objectionable advertising not accepted. Both editorial and advertising columns are closely censored to keep them clean and decent.



Published by
The MacLean Publishing Co., Limited

DOMINION SHEET METAL CO., Ltd.

HAMILTON, CANADA

Our Thanks to Hardware Dealers

YOU have proved that a service for your benefit will win your confidence. Many of you at once saw the profit and customer-satisfaction to be gained by a liberal use of our *Warehouse Department.* To you we extend our thanks for making this department a huge success.

To those of you who are not using this *Hardware-dealer-service,* and thereby losing a share of profitable trade, let us explain what it means to you.

Nearly two years ago we placed a big stock of Bars, Sheets, Bolts, etc., at your disposal, so you could have your order shipped within 24 hours of its arrival in our office.

This Stock Consists of:

Bars.
Rounds, Squares and Flats.
Mild Steel.
Reinforcing, Cast Steel.
Machinery Steel.
Sleigh Shoe Steel.

Rivets.
Boiler, Structural and Plate. All sizes.

Sheets.
Blue Annealed.
Black Sheets.
Galvanized.

Angles and Tees.
Black, ¾ in. up.

Bolts, Nuts and Spikes.
Machine, Carriage, Patch and Stay Bolts.
Ship and Shimming Spike.

Tubes.
Lap Welded and Cold Drawn. Seamless.

Plates.
Boiler and Tank.
Chequered.

Rails.
8 to 80 lbs. per yard.
New and relaying.

Turnbuckles.
All sizes with stubs.

We offer you the advantage of securing your material in the exact size required. This saves you paying freight on waste, also time, and labor otherwise required for alterations. We try, whenever possible, to include your order with carload lots, thus giving you advantage of lower freight rates.

Your order is followed through our tracing department, ensuring delivery of goods as quickly as possible.

There is no question as to our offering you equal —or even better—service and price than can be obtained elsewhere.

Write us now for our monthly stock list.

THOSE WHO, FROM TIME TO TIME, HAVE FUNDS REQUIRING INVESTMENT, MAY PURCHASE AT PAR

DOMINION OF CANADA DEBENTURE STOCK

IN SUMS OF $500 OR ANY MULTIPLE THEREOF.

Principal repayable 1st October, 1919.

Interest payable half-yearly, 1st April and 1st October by cheque (free of exchange at any chartered Bank in Canada) at the rate of five per cent per annum from the date of purchase.

Holders of this stock will have the privilege of surrendering at par and accrued interest, as the equivalent of cash, in payment of any allotment made under any future war loan issue in Canada other than an issue of Treasury Bills or other like short date security.

Proceeds of this stock are for war purposes only.

A commission of one-quarter of one per cent will be allowed to recognized bond and stock brokers on allotments made in respect of applications for this stock which bear their stamp.

For application forms apply to the Deputy Minister of Finance, Ottawa.

DEPARTMENT OF FINANCE, OTTAWA,
OCTOBER 7th, 1916.

A Ready Reference Table

For your convenience we have compiled at the right a list by means of which it is possible to tell at a glance just what your electrical requirements are, what they should cost, and what we are prepared to furnish.

The value to you of being able to purchase all of your appliances of one well-known and generally recognized brand is of course considerable.

It is, however, of still more and lasting value to you and to your customer to know that greater heat from less current and longer wearing qualities result from every article stamped with the Universal trade-mark.

GOODELL-PRATT

1500 GOOD TOOLS

GOODELL ALL-STEEL MITRE BOXES

AND GREENFIELD DRILL CHUCKS

For ten years the Goodell ALL-STEEL Mitre Box has been gaining favor with mechanics because it is non-breakable.

The total amount spent for replacements and repairs of Goodell Mitre Boxes has amounted to less than fifteen dollars in ten years.

Durability is but one of the Goodell features. An automatic lock to hold the saw elevated. A stop regulates the depth of cut. Saw lever locks automatically at all regular angles. Instantly locked at other angles by pulling a small knob.

Extra angle attachment enables operator to cut angles more acute than 45 degrees. This attachment can also be used as a molding holder. Length gauge adjustable up to 20 inches.

These ALL-STEEL Mitre Boxes are made in 3 different sizes and furnished with 5 different sizes of Saws.

The Goodell line also includes an iron Mitre Box and the remarkable Greenfield Drill Chucks.

PRESTIGE WINS

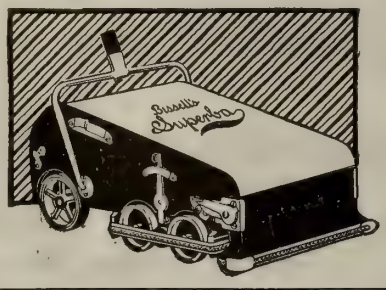
Against Price-Cutting

Dealers specializing on the BISSELL line of vacuum sweepers and carpet sweepers never suffer from price competition. The prestige won by over forty years spent in giving American women the most efficient carpet sweeping devices manufacturing progress can produce cannot be affected by price-cutting. The assurance of years of satisfactory service is a greater inducement to buyers than saving a dollar or so on the original cost.

With BISSELL prices standardized and published in every BISSELL advertisement, with these advertisements appearing in practically every publication read by women, every purchaser knows she is getting a square deal.

There is no sales talk necessary, no insistence on quality, no persuasion required. You show your customer the machine she asks for, she buys it. That's how BISSELL'S are sold.

With prices both standard and popular, BISSELL'S equips you to meet all comers in the hand-propelled cleaning device line.



Our annual Christmas offer is now in force. It contains some of the most attractive inducements we have ever presented. Let us mail you a copy of the announce- if you have not already received it.

Making Oil Measure Itself

When oil must pay a profit it must be handled right. Too often oil loss is discovered only at inventory time — then too late to do any good.

Oil "loses" itself in many ways. Generous measure, spillage, leakage, evaporation and "oil barrel" waste all eat up good profits. Besides, old-time methods of handling mean oily premises —slip-shod, "guess-work" methods.

All of this is done away with when paint oils are kept in

BOWSER — **Safe Oil Storage Systems**

Air can't play across the oil. Formation of "foots" and "fats" reduced to the absolute minimum. No evaporation, absorption or congelation. No muss or loss in handling. Oil is measured and checked as sold. No "mistakes" — no lost profits.

For thirty years Bowser has been solving oil storage problems. You **need** a Bowser system in your establishment. Ask Bowser to tell you about it and of the concerns that are Bowser-equipped. Costs nothing to find out. Saves money.

Write to-day. A Bowser System compels profit-making efficiency.

MARK

A Remarkable Tire Chain

You will consider it the gem of your auto accessory department.

Bull Dog Anti-Skid Chains

The all solid steel links, the Bull Dog grip makes them durable and efficient beyond comparison.

The cross chain fits snugly to the tire surface from bead to bead of the rim, allowing no sharp edges to cut, wear or tear the rubber or fabric.

This chain is non-reversible, the smooth, flat surface must always go next to the tire.

These chains are built to satisfy bumps of economy in all lines.

1. They are absolutely harmless to the tires.
2. They cannot roll or twist on the tire, thus making them absolutely non-skid.
3. We will guarantee these chains to wear twice as long as any other tire chain on the market.

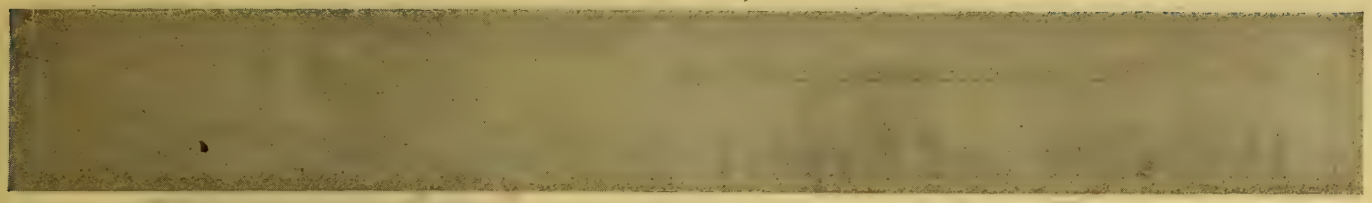
"QUALITY

What Metal products can I obtain to-day?"

THIS is the big question to-day---for all merchants who sell metal products of any description.



It is the question that underlies 90 out of every hundred letters opened each day in the offices of the various companies producing iron and steel on this North American continent.

The demand is greater than the supply—and our imperative obligations to supply the needs of the Empire are

THE STEEL COMPANY
OF CANADA, LIMITED

SERVICE

If interested, tear out this page and keep with letters to be answered.

such that, on many lines, we have to ask our customers to wait weeks—and even months—for delivery.

But where we see a ray of light as to immediate delivery of certain of our products, we are just as pleased to announce it as our customers can be to hear of it.

So it is with real satisfaction we advise you of the following lines we can ship promptly:

MERCHANT BAR IRON
(ROUNDS, SQUARES AND FLATS)

WROUGHT PIPE

Pressed Spikes	Small Railway Spikes
Small Rivets	Tacks (CUT, CARPET, AND UPHOLSTERERS')
Shoe Rivets	Shoe Nails
Lead Pipe	White Lead
	Putty

Of what we can do for you to-morrow, we can predict nothing. We only know how we are fixed for the immediate present. In other words, take advantage of our ability to ship on these lines—and get your order in to-day.

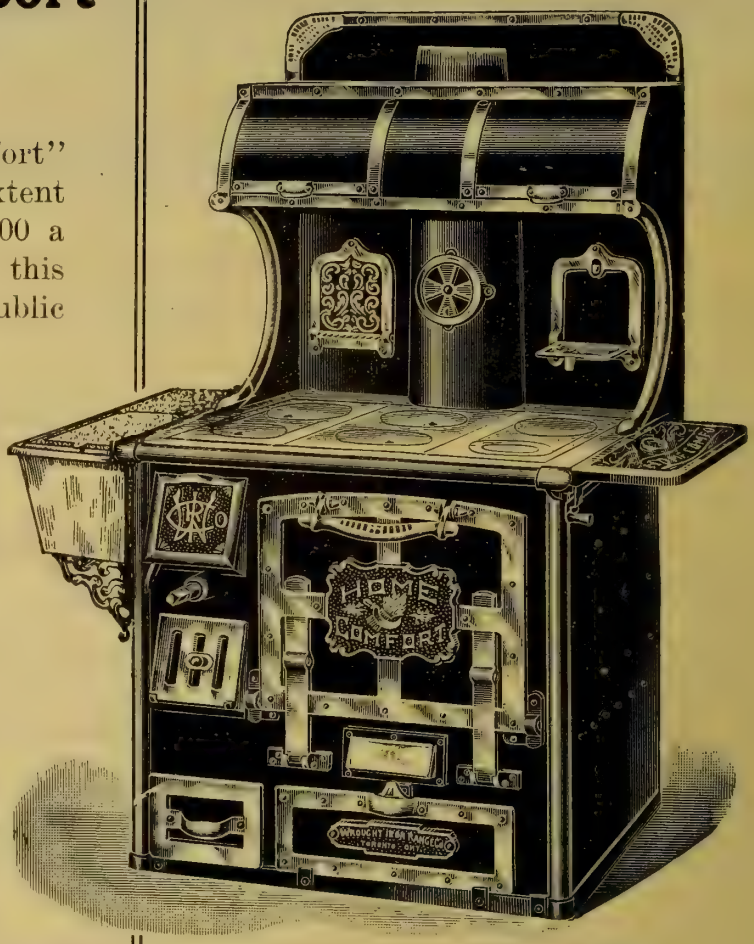
Domestic and Export Trade

In Canada the "Home Comfort" Steel Range has sold to the extent of 50,000—at the rate of 2,500 a year for the past 20 years. Let this past suffice as evidence of public **favor** and **satisfaction.**

We have had direct contact with the actual buyer and user—the woman in the Home—this because our policy for 15 years was to sell direct to the consumer. Now our policy is to sell through the retail trade. But the point we press home is this.

"HOME COMFORT" Steel Range



has been made perfect by Women's suggestions and demand.

We have used our scientific and practical knowledge to make this range of our Scientifically and Constructionally right, but we freely admit our indebtedness to the woman-buyer in many details of appeal to her.

So it is with confidence well founded that we solicit correspondence from all dealers in Stoves and Ranges.

Export Business is Solicited.

Our capacity and facilities warrant us in Establishing Connections with Overseas lands; and accordingly we invite correspondence from all firms interested in the purchase and re-sale of a range of altogether Exceptional Record.

Construction:

MATERIAL: Best quality of open hearth, close annealed cold rolled steel, and trimmed with the best quality of soft annealed malleable iron.

BODY: Sixteen gauge in one piece.

OVENS: Fourteen gauge with twelve gauge bottoms heavily braced with malleable iron to make warping impossible.

FIRE-BOX is lined throughout with heavy grey iron castings, having projections that retain the fine ashes and thereby increase the extraordinary enduring qualities of these linings.

GRATES: Heavy duplex pattern. They need only be reversed for burning wood.

WARMING CLOSET: Made of highly polished steel with double rolling doors, which may be left open at any time without inconvenience.

TANK: Sixteen oz. copper contact, heater adjustable on front of range.

NICKEL PLATING: Very best quality obtainable and made plain and easy to keep clean, the whole making a highly ornamental effect.

GUARANTEE: The working qualities of the range are fully guaranteed under reasonable draft.

STERLING FURNACE

CARLETON PLACE **WINNIPEG**

A Remarkable Heating Apparatus

The Modern Sterling Furnace is the application of fundamental scientific principles applied to furnace construction. Every inch of the Sterling Furnace has a definite purpose carefully thought out to make it the best, the most efficient and economical Heater on the market.

This Sterling Furnace of ours is positively the only furnace having a *Heat-Retaining Apron.* This Heat-Retaining Apron alone increases its heating capacity by one-third; because,

1st. It intercepts the heat that would otherwise be wasted into the cellar, and holds it inside the furnace until the passing air can absorb it.

2nd. It increases the length of the Air-Chamber, thus preventing the over-heating of the air and permitting the passage of the largest possible volume of air.

It has an *Air-Passing Capacity* equal to its *Air-Warming Capacity.*

Catalog describes many other distinctive features.

WRITE FOR THE STERLING BOOKLET

It tells the story of the Sterling fully and ask us what our proposals to agents are.

We build stoves and Ranges, too.

We make a STOVE or RANGE to suit all conditions of trade, be it low-priced or the highest class.

Your enquiries re exportations will receive our prompt and careful attention.

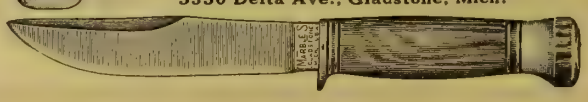
A considerable price advance is effective January 1st.

MARBLE'S SAFETY AXES

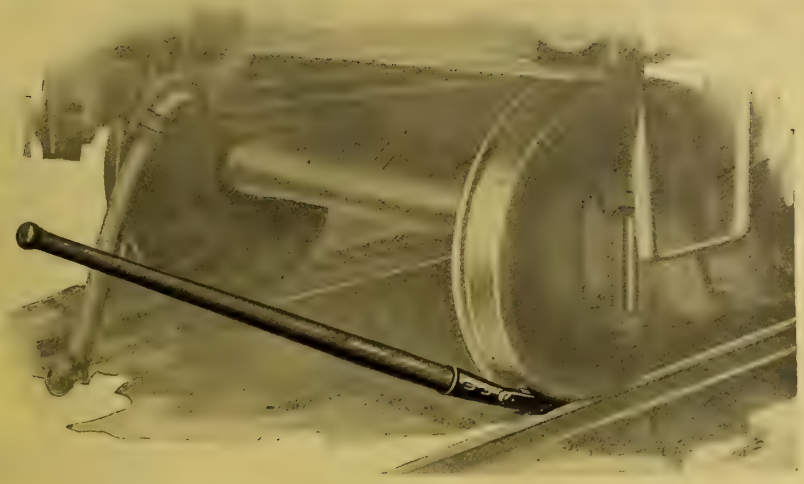
Famed for their **quality** and **utility.** Small enough for the pocket—big enough to fell a tree. Heaviest model only weighs 27 ozs. Made in several styles and sizes, with wood or steel handles—plain or claw back. List prices $1.50 to $3.00.



Marble's Hunting Knives

The kind good sportsmen like, because they're shaped right—made right. Best of cutlery steel blades—stag or laminated leather handles. Sheath furnished with every knife.

Woodcraft (at left), $1.50 list.
Safety (at right), $3 to $4.00 list.
Expert (below), $2.25 to $2.50 list.



TRADE SUPPLIED BY JOBBERS

Write for catalog of entire line, including famous Game-Cutter Gun.

MARBLE ARMS & MFG. COMPANY

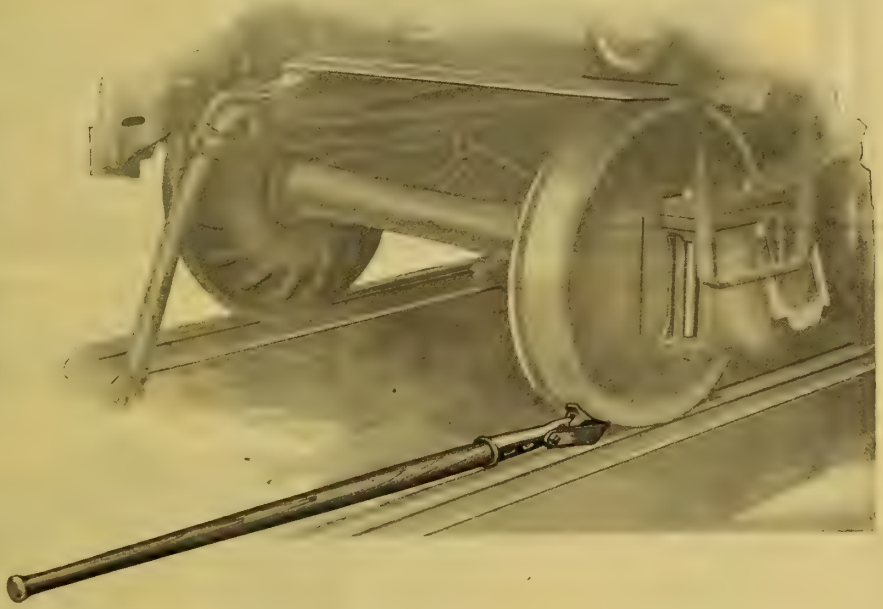
5350 Delta Ave., Gladstone, Mich.

The "SAMSON" Railway Car Mover

Every railway siding should be supplied with one of these tools. Takes the place of fifteen men and puts the heaviest loaded car just where you want it. It will pay for itself in 30 days.

Cut on the left shows position of mover before moving car and cut below after car has been moved.

It is one of the most simple and powerful devices for moving cars by hand.



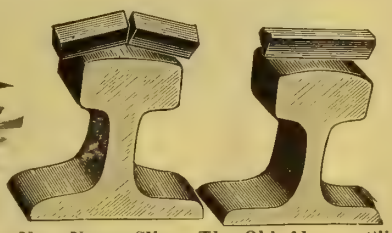
It is provided with **Never Slip Spurs**, which is the most important feature on a Car Mover.

It is very easy to move a car if the Mover does not slip back. By the use of our double spur we get a double hold on the rail and thereby double the resistance, which is the most essential part of a Mover. You will notice that the working parts of this device are not connected by rivets and links which are constantly wearing out and breaking. One bolt connects all working parts. It is so constructed that when car is just started you have the most leverage, and it gains speed as the lever is depressed. We claim that our Mover will work under a lower brake than an other Mover.

It is so constructed that when the handle is raised to push the Mover forward it raises the spur from the rail, which protects the spur from being dulled. This does away with all springs and rollers, which are only a nuisance.

It has no equal and stands superior to anything else in the market.

Select Northern hard maple handles make it light and handy. Malleable castings make it light and strong. The spurs or heels are made of special tool steel. We guarantee malleable parts six months.



If your jobber cannot supply you, write us direct

Special attention given to Export Orders.

It has two four-cornered spurs, which catch the outer edges of the rail, where rail is soft, and not where other movers do, on top of the rail where it has become case-hardened from the wear of the car wheels, as shown in lower right-hand cut. The spurs can easily be driven out and turned as edges get dull.

ERECTOR

"The Toy Like Structural Steel"

Why? Because the boys know they can have barrels of fun playing with Erector—that they can join in the new fun Erector Toy Engineering and win Diplomas, Honors and other Rewards—and that they can win prizes in the $5,000 Prize Contest.

Furthermore, thousands **more** boys will be interested this year than ever before. Erector this year is being more extensively advertised than **any toy ever before has been advertised.**

BIG EXCLUSIVE ADVANTAGES IN ERECTOR

1. The only Actual Structural Steel Toy.
2. The lapped, interlocking edges of Erector Girder, (an exclusive patented feature) enable you to build four-sides and square columns.
3. Each piece is stamped, accurately out of steel.
4. Each part scientifically made; correct in design and proportion.
5. More parts for building, strongest and largest models.
6. Every essential engineering part.
7. Anything mechanical can be duplicated with Erector.
8. Big, reinforced steel wheels, grooved and hubbed for every engineering purpose.
9. You can make big strong models, some 20 ft. long, that will hold a man.
10. A sturdy Electrical Motor comes with most sets and will lift 200 lbs. when connected with multi-geared box. Scientifically constructed by experts. More than toy. Operates with Reversing Switch Base, Control Switch, Multi-Geared Motor Box.
11. Three big Manuals, showing over 500 exceptional mechanical models. In addition to those illustrated thousands of other models can be built, depending only upon your originality and skill, for there is nothing mechanical but what can be duplicated with Erector.

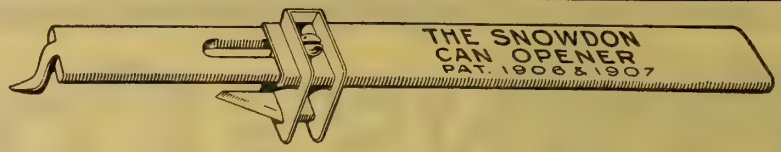
Sponge Fishing Boat

Sponge Packing House

We Are Open To Increase Our Export Business

We are shipping Bahama Sponges direct from the British West Indies to some of the largest Sponge Importing Houses in London, England, New York, U.S.A., and other large centres. We would like to get in touch with further Sponge importers in **any** country.

The greatest care is taken in the cleaning, selection, grading and packing of our Sponges, and we claim our packing to be as nearly perfect as it is possible to turn it out.



We make export shipments at the lowest market prices direct from the British West Indies to any part of the world (excepting, of course, our enemies).

We refer you to the Royal Bank of Canada, Nassau, Bahamas, B.W.I., as to the reliability of our packing, etc.

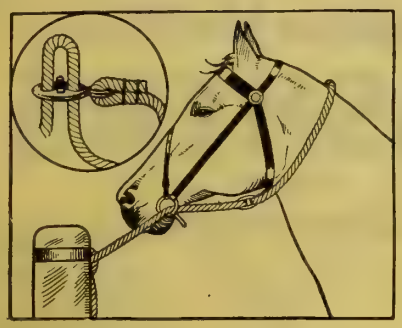
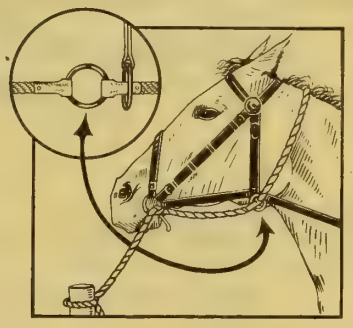
Parlor Pool

15 Ball Game



Our Parlor Pool Board is manufactured similarly to the Parlor Billiard Game described on the opposite page. It is correct and true, and full of life. The pockets are well braced. We furnish 16 high-class composition balls, 1½ inches in diameter, numbered from 1 to 15, with a white cue ball, four cues with regular tips, and a frame. Size 24 x 48 x 1¾ inches, with 2¾ inch legs. Weight 18 lbs.

We take pride in offering a well-built board at a low price which will place it within the reach of all and make it essentially a home game.



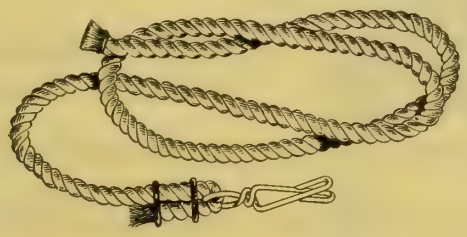
A Big Profit Line.

The SCHULTZ BROS. CO., Limited, BRANTFORD, ONT.

If interested, tear out this page and keep with letters to be answered.

Two Popular Sellers

The Handy Tie



Still a general favorite with all horsemen, it is absolutely unique in its line. Simplicity itself in construction, it is so easily fastened and so absolutely secure. Can be tied with mitts on and won't break or bind. Handy as a snap and ring, yet it's much stronger and less expensive. The Handy Tie is made in three weights of rope, selling at 25c, 30c and 35c each. Dealers' prices—$2.00, $2.50 and $3.00 per dozen. Send us an order by the next mail.

The Harvey Tie

A much superior device to the ordinary snap and ring tie. It is especially designed for street tying. Can be fastened very easily and is very convenient for a woman to use. If the shank is run through the bit, the horse cannot run forward and break a shaft. Wrought steel rings are used and the rope can be supplied in any of three weights, with the ends wound with waxed thread and securely clamped. The Harvey Tie retails at 40c, 45c and 50c each. Dealer's prices $3.50, $4.00 and $4.50 per dozen. A trial order will convince you. Send it to-day.

Sisal Rope Ties and Shanks

Strong and Serviceable

We carry a fine asortment of Sisal Rope Ties and Shanks. These sell at popular prices and give you a good margin of profit. Send us an order for a couple of dozen in assorted sizes. Use price list given below.

The Safety Shank

Without a question, this is the finest shank on the market. The "Safety" is a wonder, no horse can loosen it. A very strong and secure shank. Supplied in either sisal or cotton rope. Sells at 25c each in sisal. Dealer's price $1.80 per dozen. Order a dozen by return.

Price List

No.		
71—	3/8" x 7 feet, with snap only for halter shanks	$ 80
72—	7/16" x 7 " " " " " " "	1 00
73—	1/2" x 7 " " " " " " "	1 20
74—	9/16" x 7 " " " " " " "	1 40
75—	5/8" x 7 " " " " " " "	1 60

NORCROSS GARDEN CULTIVATOR-HOES

Have Revolutionized Gardening

They fill practically every need in cultivating and weeding, will work closer to plants without injuring the roots than any other tool, are suited to both men and women, and cost but a trifle more than the old style hoe.

The sharp tapering shovels enter the soil easily, tearing up every bit of earth from 1 to 5 inches deep as required, leaving the ground level, loose and untrampled.

A "Norcross" tool will prove profitable in any garden, large or small, at home or abroad. Thousands are being exported to Canada, Australia, N.Z., S. America, S. Africa, etc.

We solicit export trade and give same our very best attention.

The "Norcross" is a Quality Line through and through. Detachable Steel Prongs, Malleable Head. Highest Grade Handles; made in 3 sizes, 6-prong and 3-prong with 4-foot handles; Midget with 9-inch handle.

Mr. Dealer: Here's Your Chance to Make Your Store Headquarters for Best Trade.

PEERLESS Poultry Fencing

Not Mere Poultry Netting

Here is a fence you can sell.

Stands up straight, stretches flat, all wires of even length.

Made of Open Hearth Steel Fence Wire—tough, elastic, springy—will not snap or break under shock or atmospheric changes. Our method of galvanizing prevents rust. Will not flake, chipor peel off. The joints are securely held with the "Peerless Lock" and can be erected on the most uneven ground without buckling, snapping or kinking. The heavy stay wires prevent sagging and require only half as many posts as other fences. Keeps all animals out, confines the smallest chicks, they can't get through.

Valuable Territory Open to Good Dealers

We still have many fine openings for good reliable dealers. If you want to be the leading fence dealer in your locality, write at once. Never has there been a better time to sell quality fencing. You can make your store headquarters for the best trade. Don't fail to write and get our Dealer's Proposition.

Flexo-Spring Whip

FEELS LIKE WHALEBONE

WEARS LIKE RAWHIDE

GUARANTEED TO STAY UP AND KEEP PLIABLE UNTIL WORN OUT

HAMILTON WHIP COMPANY
HAMILTON, CANADA

Save Breakages On Your Whips!

Ninety per cent. of whip breakages are due to drying out of the rattan.

The rattan dries out only after the bark has been stripped. While the bark remains on, it is practically unbreakable.

If it were possible to make whips from rattan with the bark intact, there would be no whip breakages. But the rattan must be not only barked, but turned to shape, and, in ordinary whips, the rattan quickly dries out and becomes brittle.

On this point hinges the superiority of

FLEXO-SPRING WHIPS

After being turned to shape, and before the sap has a chance to dry, the rattan is protected by **O'Brien's Rubberized Coating,** which is brushed on in such a way as to form an artificial bark. This coating keeps the sap in the rattan indefinitely. That is why **Flexo-Spring Whips** permanently retain their flexibility. They cannot deteriorate in stock.

Over the rubberized coating, Flexo-Spring Whips have an English cushion outer cover, double plaited. This forms a durable protection from wear and weather.

A Hand-Made Philadelphia Snap is used on Flexo-Spring Whips and completes the biggest whip value ever offered—a well-made, attractive appearing and permanently flexible whip, at a very moderate price.

Do you want our agency? It is still open in several countries, and we would like to hear from you.

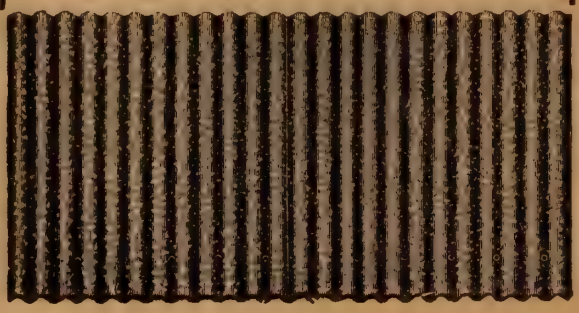
PEDLAR'S "PERFECT" SHEET-METAL PRODUCTS

Everywhere, the world over, Pedlar's "Perfect" Sheet Metal Products have justified the full confidence of dealer and user alike. The largest manufacturers of sheet metal products in the British Empire. For anything in sheet metal it will well repay you to examine Pedlar Products first.



Pedlar's Corrugated Iron

For roofing and siding makes an indestructible metal covering for any structure where strength safety and wear are essential.

Unexcelled for pavilions, storage houses, stables barns, outbuildings, or any structure exposed to severe weather conditions.

Quick and easy to use. Cannot rust, rot or decay. Made in three sizes of corrugation.

Write for particulars.

Pedlar's "George" and "Oshawa" Shingles

Typify the most perfect form of sheet metal roofing. Cheap, easily laid, cannot rust, rot, leak, burn, and are proof against lightning.

Pedlar Shingles lock together tight on **all four sides,** forming practically a single sheet of metal. The nailing flange is concealed and entirely protected from the weather.

The "George" Shingles, size 24-in. x 24-in., are used principally for barns and large buildings. The "Oshawa," in two styles, size 18-in. x 24-in. are used principally for homes and other structures where beauty is a consideration. The "Right Roof" Booklet free on request.

Master BATTERIES

Water and Weatherproof

MASTER batteries are the logical choice for export trade, as their water and weatherproof qualities fit them to withstand long periods of inactivity without depreciating, and their energy is not affected by excessive heat, cold or dampness. The cells are coated with a special bitumastic varnish, wrapped in a sheeting of asbestos and then sealed in a waterproof, laminated fibre carton, leaving a dead air space which acts as a temperature equalizer, the same as in the thermos bottle. In addition they are now equipped with a safety cap which prevents any depreciation when not in use.

Cost Less—Last Best

We are manufacturers of all standard types of dry and flashlight batteries and can give promptest delivery, are in a position to render exceptionally liberal export terms, and guarantee everything we manufacture, which includes

The Story

of

The Nova Scotia Steel & Coal Company, Limited

IN WORDS

A HISTORY of the Nova Scotia Steel and Coal Company would be, in large measure, the record of Canada's achievements in the development of her coal and iron industries.

Merged in "Scotia" are the companies that mined the first coal and smelted the first steel in Canada. Their activities date back nearly three centuries, when concessions were first granted that included the whole of Cape Breton Island, one of the richest coal fields in the world. With such antecedents it is only natural that no efforts should be spared by the Nova Scotia Steel and Coal Co. to keep this monster industry right in the van of further development and progress. Their record has been one of continuous and substantial expansion, which indicates careful forethought in administration and planning.

The Nova Scotia Steel & Coal Co., with its subsidiary company, the Eastern Car Co., of New Glasgow, N.S., has become one of the largest industries in Canada. In fact, it really combines five distinct industries:

1. **The Iron Mines at Wabana, Newfoundland.**
2. **The Coal Mines at Sydney Mines, N.S.**
3. **The Blast Furnaces and Smelting Works at Sydney Mines, N.S.**
4. **The Steel Works at New Glasgow, N.S.**
5. **The Car Works at New Glasgow, N.S.**

The Wabana (Newfoundland) iron properties are the largest on this continent, if not in the world. Experts estimate the available reserves of ore as between 2,000,000,000 and 3,500,000,000 tons, an amount which at the present rate of mining will not be exhausted for more than 3,000 years.

Some idea of the wealth of the Wabana iron fields may be gained from comparison with the next largest holdings on the North American Continent—those of the United States Steel Corporation—which are estimated at 1,300,000,000 tons.

In connection with its coal mines it is interesting to note that "Scotia" controls 35 square miles of submarine property. The underground excavations extend several miles beneath the sea, and submarine mining is done on a very large scale.

At Sydney Mines the modern steel plant of the Nova Scotia Steel and Coal Co. has a blast furnace and open hearth steel capacity of about 100,000 tons per year, equipped with all the necessary coke ovens, coal washers and engineering shops. At the shipping port of North Sydney, only three miles from the collieries and steel works, extensive docks with the most modern facilities for coal shipping and ore receiving have been constructed. The great rolling mills, forges and machine shops of the Nova Scotia Steel and Coal Co. are located at New Glasgow. This plant is housed in a group of modern steel and concrete structures, extending over 25 acres. Here the steel ingots from the company's furnaces at Sydney Mines are manufactured into marketable products.

Story continued from page five

A new development, already under way, is a shipbuilding enterprise. The pioneer product will be a vessel 220 feet in length, and this vessel, when completed, will enter the "Scotia" Company's general freight service.

The Eastern Car Company, a subsidiary of the Nova Scotia Steel & Coal Co., manufactures "All-Steel" Cars to all gauges, for domestic or foreign orders. The capacity of this plant is 40 cars per day. The Company has unexcelled water and rail shipping facilities for the export of freight cars of all types abroad, or to United States markets.

"Scotia" Directorate.

The men directing "Scotia" are, as might be expected, prominent in a wide variety of successful industrial and commercial enterprise, as a glance at the accompanying list indicates:—President and general manager, Colonel Thos. Cantley, New Glasgow, N.S.

Vice-president, Hon. J. D. MacGregor, Ex-Lieutenant-Governor of Nova Scotia, New Glasgow, N.S.

Vice-president, W. D. Ross, director Bank of Nova Scotia, Toronto, Ont.

J. Walter Allison, director Bank of Nova Scotia, Eastern Trust Co., Acadia Sugar Refining Co., etc., Halifax, N.S.

James C. MacGregor, vice-president Eastern Car Co., president I. Matheson & Co., director J. C. Carmichael & Co., New Glasgow, N.S.

George F. MacKay, former manager Nova Scotia Forge Co., New Glasgow, N.S.

Robert E. Chambers, M.I.M.E., manager ore mines and quarries, New Glasgow, N.S.

Frank W. Ross, capitalist, Quebec, P.Q.

Lorne C. Webster, vice-president Quebec Railway, Light, Heat & Power Co., Montreal, P.Q.

Frank Stanfield, M.L.A., director Stanfield's, Ltd., Truro, N.S.

George S. Campbell, director Bank of Nova Scotia, director Eastern Trust Co., Halifax, N.S.

W. H. Chase, Wolfville, N.S.

A. E. Rendall, St. John's, Newfoundland.

N. Bruce McKelvie, of Hayden & Stone, Boston and New York.

NS

Help Your "BOSS"

to make more money and incidentally get some valuable gifts for yourself!

We suggest that you show him this advertisement and ask him to connect up with this remarkable proposition by return mail. Here's the proposition briefly told: We know that the sales of some safety razors are alarmingly decreasing. Why? Because men have found that a razor *must be stropped* to give a comfortable and satisfactory shave. You know this from your own experience. The

AutoStrop SAFETY RAZOR

is the only self-stropping razor on the market and we know that just so soon as a man tries it he prefers it above all others because he at last gets a **real shave** from the **stropped** blade of a genuine safety razor.

Now, in order to get all men to try the **Auto-Strop** we are using full-pages in the large magazines to tell them to go to their dealer's and borrow an **Auto-Strop** on thirty days' free trial, to be returned if unsatisfactory or to be purchased if satisfactory. There is no deposit, no provisions or strings of any kind to the offer.

To those dealers who have joined with us, we say, lend **Auto-Strop Safety Razors** to your customers in accordance with our offer and we will back you in every way.

If a razor is returned after the customer tries it, send the used razor back to us for a new one. If a customer should fail to either return or purchase a razor which he has borrowed, we will stand the loss. You run no risk or take no chance whatever.

VALUABLE GIFTS

Are being given to proprietors and the clerks for their friendly co-operation in connection with this plan, but the consent of the proprietor is necessary before clerks can participate in this feature of the proposition. If you are a clerk, show this to your "boss." If you are a proprietor or buyer, write us at once for full particulars of this remarkable offer. Act now, it means money to you!

STANLEY Garage Door Latches and Pulls make it easy to handle heavy garage doors from either side by the double handles and thumb pieces. They give a finished appearance to both the outside and the inside of the door. Large and comfortable grips. Stanley Fastenings hold doors tightly shut so they do not rattle or admit draughts.

The Stanley Garage Door Latch, here illustrated, is just one item in the comprehensive line of

STANLEY GARAGE HARDWARE

Hinges, Latches, Pulls and Bolts, especially designed for use on heavy garage doors, can be obtained either separately or in sets. For every type of garage—concrete, stone, brick or wood—there is just the right assortment of hardware.

Our Catalog R 111 fully illustrates these sets and shows how they will look when applied to garage doors. Send us your address and we will mail you a copy.

Canadian Exports Increased $535,000,000

Figures Up to September 30, Show Huge Increase in Canada's Trade — Exports of Manufactures Increase Over 400 Per Cent.—What Canadian Manufactures are Doing Abroad

THAT Canada is rapidly becoming a great export nation is shown by Government figures which indicate the extent of Canada's trade for corresponding periods of recent years. Never before in the history of the Dominion have Canadian manufacturers devoted more study to the possibilities of developing export trade. To-day there are many Canadian manufacturers doing a nice export trade, who prior to the war, confined their entire attention and efforts to the development of trade within Canada. It is true that military requirements have been to a great extent responsible for some of the huge increases in the value of exports. But in additions to the demand for military supplies, there have been heavy exports of many manufactured products which have gone forward to supply the domestic requirements of foreign importers.

On this page is shown a list of manufactured goods. This list represents some of the products which are now being exported abroad, or which Canadian manufacturers state they are in a position to export. The list is not by any means complete, but it will give the reader some idea of the diversity of products which Canadian hardware manufacturers are making or are prepared to make for export trade.

One of the most pleasing features of Canada's new export trade is that the goods leaving this country are of the very best quality in workmanship and material. Cheap, shoddy-goods have not found a place among the exports of Canadian hardware manufacturers.

Another important feature of present-day trade, and one which has been decidedly noticeable ever since the outbreak of the war, is the large number of inquiries from abroad for prices, catalogues, etc., of Canadian goods. A great many inquirers have been able to secure what they needed, while others have found that the goods needed were not made in this country. During the past two years quite a number of new industries have started in Canada. Many others operating here on a small scale before the war have been forced, owing to the rush of business, to enlarge their plants and even now they are hardly able to cope with the flood of orders.

One concern, and it is typical of a number in Canada, was operating in a small way before the war. Its trade was purely local and at times it had difficulty in keeping the plant running to full capacity. Following the outbreak of the war the demand for this factory's products became more pronounced. Then the export demand became more insistent. The factory started to run full time, then a night shift was added, and still the factory was unable to meet the demand. A good-sized addition has been built and even with the increased facilities the plant is running full time and is building up a nice export trade as well as catering to an increased home consumption.

Trade Doubled in Year

Government figures just issued, will demonstrate more than anything else how Canadian trade has developed since the outbreak of the war.

Total Canadian trade, exclusive of coin and bullion, for the twelve months ending with September, amounted to $1,738,204,256. This shows an increase of $803,204,833 over the total for the corresponding twelve months, 1915, and of $737,140,757 for the corresponding period of 1914.

Total trade for the month of September alone amounted to $161,067,661, an increase of nearly seventy millions over September, 1915, and of eighty-eight millions over the trade for September, 1914.

Total exports for the year ending September, amounted to $1,052,925,651. This shows an increase of $535,000,000 over those for the 1915 period, and of almost 600,000,000 over the corresponding period of 1914. For the month of September alone there was an increase of nearly $40,000,000 in exports over September, 1914. The total value of exports for September amounted to $92,271,399. It is also interesting to note in passing

A feature of Canadian industry—The large wheat elevators of the West.

that the exports for September, 1916, are greater by over $90,000,000 than those of September, 1914. For the month of September, 1916, manufactures headed the list of exports with over $37,000,000, as against only $9,000,000 for 1915, and $5,000,000 for the same month in 1914. During 1914, manufactured products provided about 14 per cent. of the exports; 1915 provided about 25 per cent., and 1916 for the same period reached 32 per cent.

The total value of manufactures exported for the twelve months ending September amounted to $361,381,419; agricultural products, $396,455,537; animal products, $111,331,332.

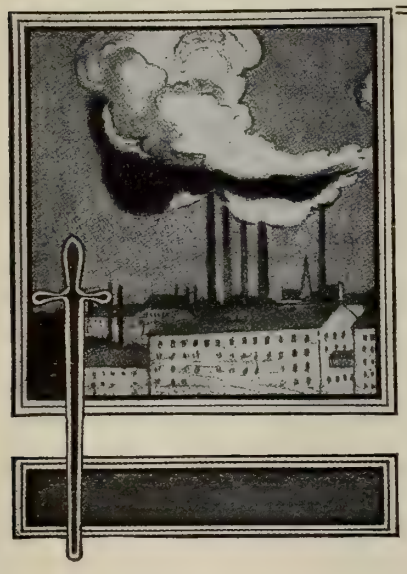
What Some Manufacturers Are Doing

One large Canadian manufacturer making iron and steel products which are handled almost entirely by the hardware trade, has since the outbreak of war created a special export department and is giving special attention to all foreign inquiries. In addition to making many lines for export (included in panel elsewhere) this firm is equipped to make special forgings or castings when large quantities (10,000 or over) are required.

To Export Paints, Varnishes, etc

Another large and well known firm is now doing a large business in linseed oil, dry paint, colors, etc. This firm is preparing and planning to have a full export business in paints, varnishes, dry colors, oxides, linseed oils, and other paint materials.

Now Selling in Foreign Markets



Another large firm and one of the oldest in Canada, doing a huge business with the Canadian hardware trade, is exporting goods to Great Britain, South Africa, New Zealand, British West Indies. This particular firm has sufficient orders on hand for export to keep this branch of the business busy for at least six months. Although this firm has a good export trade connection, plans are being made to handle more export trade when the war is over.

After Export Trade

Another manufacturer making, among other lines, suuch goods as are used in residences for domestic purposes, has already entered the South African market and the goods are being handled through a new York house. This firm has also appointed an agent in England who has a complete line of the manufacturer's samples. At present, owing to the goods being bulky, there is an embargo on some of the products made by this firm. However, the Canadian manufacturer and the English representative expect to do a big business after the war is over.

Desires Foreign Business

Still another large manufacturing firm which has been established in Canada for many years, is selling in foreign markets, but principally within the British Empire, such as the British Isles, New Zealand, Australia, British Guiana, South America, West Indies, India. This firm also ships some goods to the United States and has a connection in Russia. Some of the goods exported by the company are shown in a panel elsewhere in this issue. This manufacturer, like many others, is anxious for foreign business if he can secure payment within a reason-

"Made in Canada" Goods for Export

The following is a list of some hardware lines which are now being exported from Canada, or which Canadian manufacturers are in a position to export. Foreign buyers can secure the names of manufacturers by writing to the Editor, HARDWARE AND METAL, Toronto, Canada. The list does not by any means represent the extent of exportable products "Made in Canada." HARDWARE AND METAL will be glad at any time to answer inquiries from foreign buyers and to put them in touch with Canadian manufacturers.

able time. It is the policy of the manufacturer to quote f.o.b. Canadian Atlantic seaboard, or equalize freight on same. Where it is necessary to collect from the customer direct and not from an authorized agency, the manufacturer prefers to ship with draft attached to B|L. If necessary, the manufacturer will prepay the freight and charge same up in the draft.

Had Travelers Abroad

One large firm had travelers abroad prior to the war. When war was declared travelers were called in because it was expected that before long ocean freight rates would advance to such an extent that it would practically prohibit the export of the rather heavy and bulky products of this firm. However, since the outbreak, and with the heavy freight rates, this firm has shipped several large consignments to different foreign countries. This firm has a good connection in England and India. Prior to the war it did some business in South America. The company is now negotiating with South African firms and hopes to develop a good connection in the latter country. The company makes up special goods to meet the requirements of foreign markets, and hopes to greatly increase its foreign trade after the war is over and shipping facilities have become improved. The company has issued special catalogues in English and Spanish.

Immense Exports of Steel and Iron

Exports of iron and steel since the outbreak of the war have reached figures which a few years ago would have been thought almost impossible. Several large manufacturing concerns are shipping immense quantities of iron and steel products, including the following: Bar iron, bar steel, wire nails, wrought pipe, nail wire, annealed wire, galvanized wire, barbed wire, tinned mattress wire, horse shoes, bolts, nuts, etc.

Immediately upon the outbreak of the war, Canadian manufacturers or their representatives visited England and secured large orders for iron and steel products. Arrangements were made whereby Canadian firms were to pack or ship the goods to conform with the requirements in England. Take, for instance, wire nails. These had to be packed in containers which were different to those ordinarily used in the country. Details of this kind were arranged quickly and since then huge quantities of goods have been exported despite the amazingly high prices prevailing. In a panel elsewhere is shown a list of the extras on wire nails for the United Kingdom. This list of extras was adopted by nail manufacturers on April 15, 1915, about nine months after the outbreak of the war. No doubt Canadian firms will continue to hold, after the war, a very considerable portion of the export trade they are now enjoying on iron and steel products. And there is no reason why Canada's export trade in these lines should not continue to increase for many years to come.

List of extras on wire nails adopted by Canadian manufacturers, April 15, 1915, to take care of business with United Kingdom.

Export Trade Has Been Growing

That Canada's export trade has been growing steadily for some years past is shown by the official figures of the Department of Trade and Commerce. Figures showing how export trade has been growing makes interesting reading. For the United Kingdom, the United States and other countries, by years, the exports for a ten year period are shown below. The figures represent those at the end of the fiscal year, March 31, and are as follows:—

	United Kingdom	United States	Other Countries
1907	$134,469,420	$109,772,944	$27,964,242
1908	134,484,156	113,520,500	32,001,950
1909	133,746,638	92,603,094	35,162,427
1910	149,634,107	113,150,778	38,573,644
1911	137,158,711	119,203,201	40,834,453
1912	151,853,054	120,534,993	42,929,203
1913	177,982,092	167,110,382	48,139,673
1914	222,322,766	200,459,373	56,215,789
1915	211,758,863	215,409,326	68,640,688
1916	463,081,241	220,225,080	99,566,181

The latest figures available covering the twelve months ending Sept. 30, show the export to be over the billion mark or to be exact, $1,052,925,651.

Out of Our Swaddling Clothes

From the dimensions that our export trade has taken on during the past year, it is plainly evident that Canada has stepped out of her swaddling clothes into a new era. There are some who take a pessimistic view of the situation and assert that it is but a transitory condition and that after the war the export trade will fall off again. But there are a great many also who believe that what the Canadian manufacturers and business men have secured in this changing time of war they will hold, and as the years progress secure an even larger share of trade in the markets of the world.

HARDWARE ASSOCIATION ISSUES NEW NET PRICES

Secretary Macpherson, of the Ontario Retail Hardware & Stove Dealers' Association, has just mailed the members of the association net prices to apply on price lists for the members' price books, covering carriage bolts, coach and lag screws, machine bolts, tire bolts, sleigh shoe bolts, flat head wood screws, round head wood screws, flat and round head stove bolts and square and hexagon nuts.

Prices are figured on standard discounts current on Oct. 20, and are the cost prices on which merchants should be making their profit to-day.

Members are asked to kindly compare the new prices with their market costs and they will no doubt find it profitable to advance prices. In his letter to members, Secretary Macpherson states in part: "You will need all the profits you can get to-day to look after the declines in values when they arrive, be it in one or five years."

SUBJECT TO DUMPING DUTY

According to a ruling of the Commissioner of Customs, rough-rolled wired glass and plain sheet window glass are held to be articles of a class or kind made in Canada, and, as such, are liable to dumping duty if consignments are invoiced to Canadian importers at a price less (by more than 5 per cent.) than the fair market price in the country of exportation. Plain ribbed or plain rough-rolled glass are, however, considered at present to be of a kind not produced in commercial quantities in Canada and are consequently not subject to dumping duty.

Canada's Activity in Iron and Steel

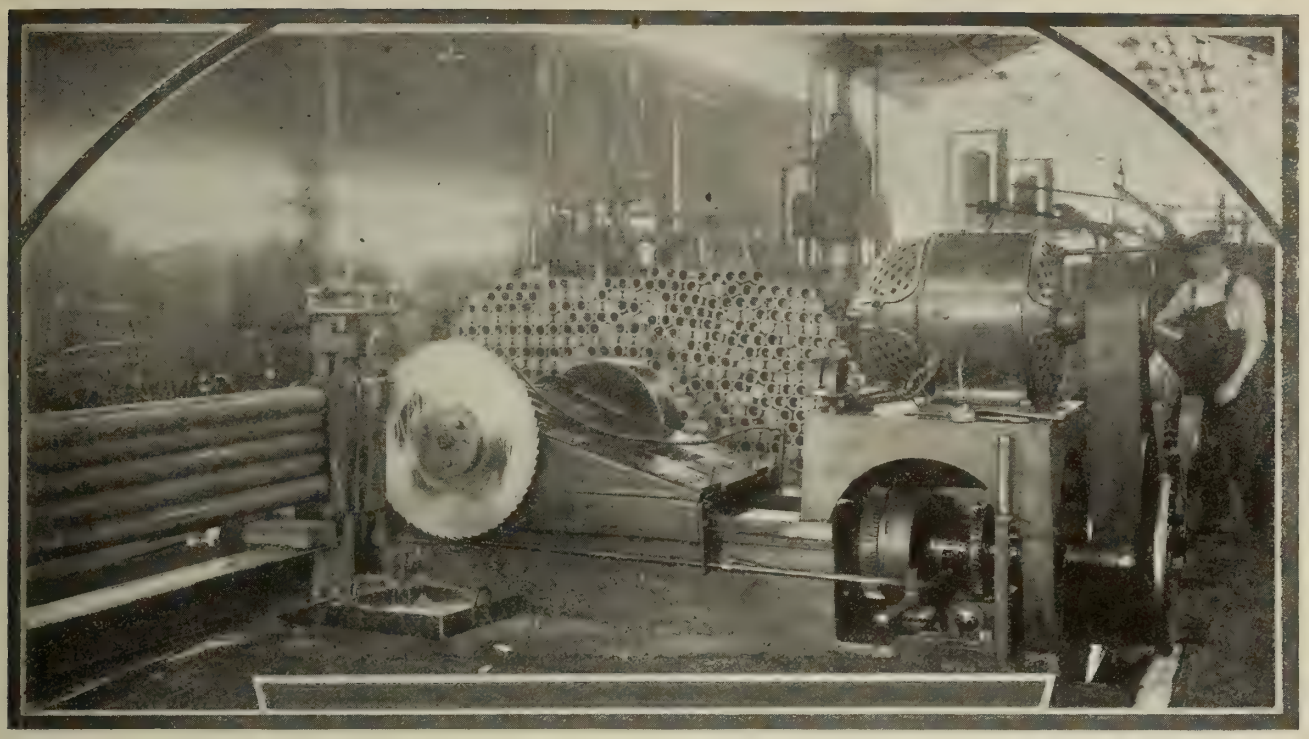
Heavy Consumption Now is Due to Munition Work, But the Prospects for Export After the War are Excellent—Europe Will Require Steel and Special Opportunities Will Open in Russia—The Problems of Domestic Demand

THE iron and steel industry being the basic industry, all speculation as to trade conditions must begin with consideration of iron and steel. The very marked business activity in Canada to-day is closely mirrored in the iron and steel trades. In considering export possibilities it is necessary to first review this trade from that standpoint.

For obvious reasons, in Canada as elsewhere, the domestic demand must provide the chief market for Canadian iron and steel products. In 1912 it was estimated that the total consumption of pig iron amounted to about 1,280,176 tons, of which 79.9 per cent. was produced at home. Consumption had more than trebled in a decade, and production had quite kept pace with it. As a matter of fact, the productive capacity exceeded the total consumption of the country. Imports consisted chiefly of special grades of pig iron that were not and could not be profitably made in Canada. Similarly the greater part, over 90 per cent., of the steel used in Canada was produced at home. One should remember, too, that 1912 was a boom year, and that, therefore, when in 1913 and 1914 railroad and other construction decreased and the consumption of iron and steel declined, the capacity of Canadian plants was far more than adequate to meet all the demands for the ordinary grades of pig iron. Hence the pig iron producers were suffering from low prices and from a general depression. When war broke out this condition was for a short time aggravated by the total dislocation of industry and most of the Canadian furnaces were closed down.

It was not long, however, before the demand for munitions put an enormous pressure on the productive capacity of Canadian mills, so much so that the demand for and the price of steel and pig iron trebled. To-day, in fact, throughout 1916, there has been a perfect famine in the steel market. The situation is so serious that Canadian furnaces have had to cancel orders for ordinary domestic purposes in favor of munitions workers. Meanwhile the steel for the Quebec Bridge has been ordered from the American Bridge Company, because it could not be got in Canada; every availale furnace in the United States is in operation; and yet it is next to impossible to get supplies for domestic purposes, and the situation is getting worse. Railroads are relaying old rails and industrial corporations which used old rails for sidings find it impossible to get them—even in the munition business.

It is not surprising that under these circumstances Canadian iron and steel producers have increased their productive capacity—especially in steel lines—and they have been fully warranted in doing so by prices like $20.50 per ton for pig iron, $45 for steel billets, and $61.60 for steel rails.



Uncertainty respecting the future must, however, be obvious. While no one knows the maximum current demands for iron and steel, it must be evident that when the domestic demand falls below the abnormally high 1912 and 1913 levels it will be exceeded by far by the increased productive capacity of Canadian iron and steel plants. One may therefore, reasonably expect that when normal conditions return, several Canadian furnaces will be out of commission, or the product will be selling at low prices, or Canadian companies will have to find and keep a new market abroad for the surplus product. As a matter of fact, all of these conditions are likely to exist to a greater or less degree.

Foreign Markets

What, then, is the character of the foreign markets? Prior to the war it was negligible. Exports of pig iron in 1912 were only $301,702, as compared with a total production worth about $12,000,000. Exports were not one-tenth of imports. Exports of "iron and steel or wares of which iron and steel are the component materials of chief value" were $139,136,072 of the imports.

But of course the war changed all this, for it was discovered that Canada had resources for which the war had created extraordinary demands. While the first few months of war were the most severe that the Canadian industry had experienced in several years, yet probably no other industry recovered so quickly. The revival was due to several kind of orders; partly for domestic needs; partly for foreign countries, especially the United States; but chiefly for war materials. At the present time the war has about the same relation to prosperity in the Canadian steel indus-

A large share of Canada's advance in export trade has been due to the munition industry.

try as the Dardanelles question has to the price of wheat.

If this is not perfectly evident, a detailed study of the figures in the following table will make it quite so.

Exports of Iron and Steel.

	1914.	1915.	1916.
Pig iron .....$	247,597 $	139,427 $	307,721
Ferro products	.....	398,488	729,029
Scrap iron	.....	.....	851.118
Wire rods	.....	.....	4,483,572
Iron and steel N.O.P.	1,515,926	7,467,268	43,458,265
Total iron and steel and mfrs.	13,039,941	15,915,535	52,744,512

As exports of agricultural implements had declined from $7,349,135 in 1914, to little more than $1,000,000 in 1916, it may be seen that the most important item to inflate the volume of exports was the munitions. It has been estimated by Col. Thos. Cantley, of "Scotia," that in the calendar year 1916, the export of munitions to England will amount to $250,000.000 at least, possibly $300,000,000. The decrease in domestic consumption meanwhile is reflected in a decrease in imports of iron and steel and manufactures thereof from $139,126,072 in 1913, to $119,229,488 in 1914, $64,758,887 in 1915, and about $41.000,000 in 1916. It scarcely needs additional explanation to prove that the current prosperity of the Canadian steel industry is due to export orders for war purposes.

Post War Conditions

What post war conditions in the Canadian industry will be, one suggests with some temerity. That depends on a number of factors, including:—

1. The extent of the domestic demand.

2. The effectiveness of attempts to favor home industry.

3. The extent of the foreign demand.

4. Canadian advantages in raw materials, proximity to markets, etc.

Canada's Needs After the War.

How extensive domestic demands will be after the war no one knows definitely. It has been generally assumed that by the end of 1913, Canada had about reached the safety point in her capital investments, or that at least she had well caught up to her immediate needs in railway building and in construction work production — especially agricultural production—seemed to be the chief need. Since that time agriculture—thanks to high prices—has been greatly stimulated. Meanwhile, as we have indicated before, very little iron and steel has been put into new construction work; indeed, maintenance and repair have been considerably neglected. Thanks to economy measures and the high prices, there has been a considerable accumulation of work that will demand iron and steel. Everyone will admit, too, that our capital supply in the form of ships is considerably depleted and quite inadequate to carry the surplus of Canadian wheat. Has Canada's production caught up with the productive capacity of her capital investments and are we ready for new investments of capital in the form of iron and steel? Without any doubt, Canada has made great strides in this direction and for a short time at least, after war orders cease—which, by the way, may happen at any time—there will be a market for steel. In fact, orders are already placed for delivery of steel as late as the latter half of 1918 and prices for delivery in 1917 are quite high. There is, of course, no doubt whatever that the domestic demand for iron and steel will greatly increase in the course of the next few decades, and that, in the long run, the Canadian industry will grow in proportion, scarcely anyone doubts.

Foreign Competition

Canadian mills are apt, however, to have to face severe foreign competition. The payment of about half of the war indebtedness of Europe in fifteen or twenty years, will be made partly in iron and steel. The United States, too, which has greatly increased its productive capacity, will be a competitor for the Canadian market. Doubtless tariff protection will still be afforded the Canadian producers and the dumping clause provides a bulwark against American price-cutting. Yet despite attempts to protect the home industry, both Great Britain and the United States are likely to get some orders in Canada and there is a fair probability that the capacity of Canadian mills will exceed the residue of the domestic demand.

The Future of Exports

Canadians will probably, therefore, devote special attention to the export trade. Already one Canadian firm has been offered a contract for deliveries for stated times for ten years. Many believe that Europe will take for some time all the steel that America can turn

out. One should remember in this connection that while there will be a great demand for iron and steel in France and Belgium, it will be structural steel and rails that will be needed and British engineering firms, relieved of the demands of the munition board, will get a large part of the orders. British firms are to-day probably the best in the world. Proximity to the market is an advantage for structural steel, being bulky, is costly to transport. All Canadian firms are at present at some disadvantage by reason of the high ocean rates for transportation and inland firms are especially disadvantaged by the recent increase in export rates by the railways. While these transportation rates are not a serious disadvantage now when they can be added to the price charged to the belligerents, they undoubtedly will be in the post war period of international competition in iron and steel unless of course both rail and ocean freights fall. The development of Russia, which has formerly bought her steel from Germany, ought to provide a wonderful and growing market for Canadian iron and steel and should suggest again the advisability of starting an iron and steel industry in British Columbia, using Texada Island ores and Vancouver Island coal.

At present the most favorable features among the prospects for an export trade after the war lie in the possible determination of the Allies to buy from each other and to close their markets to the central powers, the possibility of Britain imposing a tariff on the enemy nations, and even neutrals, and of giving a preference to the colonies, and the possible increase in European wages and taxes.

Resources—Iron Ore and Coal

Obviously, however, it is on the deposits of iron ore and beds of coal available for smelting that the future of Canada's iron and steel industry chiefly depends. One might as well confess that it is absolutely impossible to estimate Canada's share in the world's supply of iron ore and coal. They are however vastly greater than the present known deposits, and these are very important for instance, the iron ores at Bell Island, Newfoundland, and the coal of Nova Scotia are the basis of two quite remarkable iron and steel companies, the Nova Scotia Steel and Coal Company and the Dominion Steel Corporation. While "Scotia" has taken only 6,000,000 tons of ore in twelve years from Bell Island they have there still, it has been estimated, 4,000,000,000 tons of workable ore and at North Sydney "Scotia" has workable seams of 2,379,500,000 tons of coal. In Ontario the Lake Superior Corporation has valuable deposits of ore and its plant is favorably situated for receiving coal from the south and shipping the finished products to the Canadian and American West. The ores of Ontario are, to tell the truth, practically unexplored. It is interesting to note, too, that whereas many Canadian ores were ill-adapted to the old Bessemer process of steel making, the open hearth process, which is now being extensively adopted even in England, makes profitable use of Canadian ores and there is ample evidence that Canadian ores will become more and more usable as new technical processes, such as electro-metallurgy are developed on a commercial basis.

Shipping points in Canada have become very busy—Note congestion of wheat cars in yard.

CATALOGUES AND PRICE LISTS WANTED IN RUSSIA

C. F. Just, Canadian Commercial Agent in Petrograd, asks those firms which are sending him catalogues to forward at the same time price lists, together with the discounts allowed on export orders. In connection with the above, Mr. Just, points out that it is also most desirable to furnish weights of articles, size and weights of packages as shipped and the proportionate charge for packing. This information is important in that it enables parties interested to arrive at an idea of the cost price of the article delivered. Without these particulars the catalogues are of little practical use and the long delay that must elapse before this information can be obtained, discourages inquirers from proceeding further in their investigations. If prices can be given f.o.b. New York or Canadian ports, and c.i.f. Vladivostok at the present time as well, this will be an additional advantage and will impress prospective inquirers that Canadian firms not now doing business in Russia, are really in earnest about entering the Russian market.

CANADIAN DOLLAR TO BE QUOTED ON THE PARIS EXCHANGE

In a communication recently received from Philippe Roy, General Commissioner for Canada in Paris, Mr. Roy states that following representations made by himself on behalf of Canadian exporters and the representatives of several Canadian corporations now in that city, the Minister of Finance of France and the Brokers' Syndicate of the Paris Stock Exchange, agreed that beginning on September 13, 1916, the Canadian dollar will be quoted on the exchange branch of the Paris Exchange.

This information will be of interest to Canadian business circles, especially to those interested in export trade, in view of the fact that wide fluctuations have frequently occurred on the exchange markets.

CATALOGUES NEEDED IN QUAYAQUIL, ECUADOR

The British Consul, H. M. Wilson, at Guayaquil, writes that he would be glad to receive any catalogues and price lists of Canadian manufacturers for reference in his consular district.

INSTALLED NEW TINNING PLANT

What is said to be one of the most up-to-date tinning plants in the Dominion has recently been installed by the Laidlaw Bale Tie Co., Hamilton, Ont. This plant is being used for tinning and spooling wire in the finer gauges, and is now turning out mattress wire, broom wire, whisk wire, florists' wire, bookbinders' wire, togging wire, bottling wire, and similar products.

Export Trade After the War

Is Canada's Growing Export Trade in Iron and Steel Manufactures and Other Manufactured Articles Here to Stay and Increase After the War? In the Opinion of Robert W. Reford it is.

THAT the present extensive exportation from Eastern Canada of manufactured iron and steel products, principally at present shells is the real beginning of a coming considerable Canadian export trade in manufactured articles, the products of a great and growing iron and steel industry is the opinion of Robert W. Reford, of the Robert Reford Shipping Company, Montreal. Basing his views, practically, upon recent visits to the centres of activity in iron and steel manufacturing near Montreal, he said:

"I have no doubt whatever that in stating that these great industries will continue to grow and develop their export trade after the war, HARDWARE AND METAL would be perfectly correct. This is not a mere phase of the war, though at present the output is principally shells. Other manufactures besides shells are being exported, as far as the British Government permits us to export articles and produce. After the war more and more of other manufactures will be exported."

"The Vickers Maxim Dry Dock, which at first caused doubts in some minds, and the suggestion that it was a white elephant, is doing business steadily. Beside it has grown up a steel industry which is steadily growing. Over the river as a natural consequence of the Vickers' Maxim enterprise there arrived and is growing up the Armstrong Whitworth concern determined that Vickers Maxim shall not occupy the whole field unchallenged in the business sense.

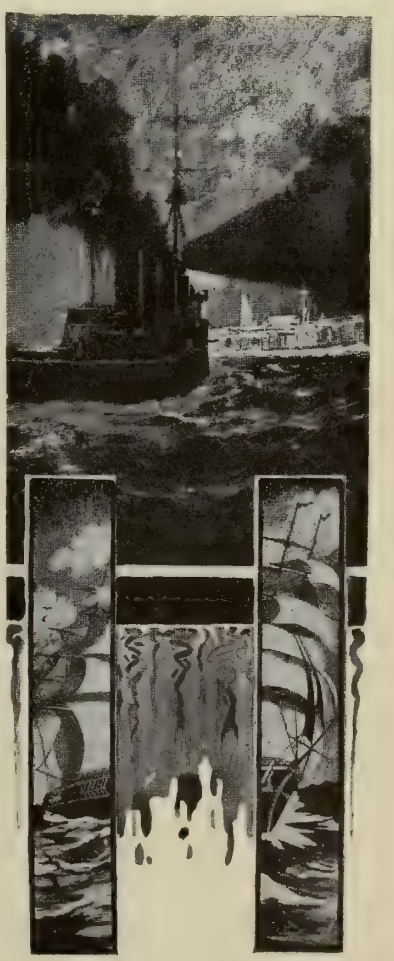
"These considerable industries have developed about them their associated subsidiary concerns, and they are there to stay. They have abundance of room for expansion, and have already expanded to twice and three times their original size at inception. Now it is strongly believed by many business men that with the completion of the Georgian Bay Canal, Montreal is to become an even more important centre of the steel and iron industry of Canada.

"Via the Georgian Bay Canal we could get the iron ores from Lake Superior by water haul all the way to Montreal. We can get coal also by water haul from Cape Breton. Montreal seems to occupy a strategic central position for the iron and steel industries when the Canal is completed.

"I have not gone into the data as regards the relative cost of production on this side as against production in England, for instance, but I understand that after the first difficulties had been overcome, we have got things out here down to a pretty keen basis of cost, and our output in shells, I understand, compares most favorably with even the English output. By elimination of the liquor disadvantage as regards workers, I think it is quite probable that Canadian iron and steel industries can compete advantageously with other similar industries of the world, and thus beyond doubt our export trade in manufactured goods will go on increasing."

That the labor question forms a vast factor in the matter as regards Old Country manufacturing both to-day and after the war, Mr. Redford appreciates strongly, but his view is that the Canadian opportunity for carrying on the manufacturing industries being developed in the Dominion is not likely to be adversely affected in the same degree, labor in Canada being in the main progressive, and Canadians, native and by adoption, being united in concern for the development of the country industrially, and in all departments.

"At present," said Mr. Redford, "there is nothing in the way of greater development of the export and manufacturing trade of the Dominion except the need of facilities for commerce, the facilities which have been hampered, and are still hampered by the effects of the war. Give us more facilities, and Canada will carry on to successful and wide development manufacturing and industrial export trade on an ever-increasing scale."



The Importance of Seaports

The Part that Halifax and St. John's Have Played in Canadian Industrial and Export Trade Development

IN an interview with HARDWARE AND METAL at Montreal the other day W. S. Fisher, of Emerson & Fisher, the Enterprise Foundry Co., Sackville, N.B., and St. John, N.B., made special reference to the effects of the events of the past two years in bringing out into prominence before the whole Dominion and emphasizing upon the minds of all Canadians, the vast importance of the seaports of the Maritime Provinces, Halifax and St. John.

"The fact that we had these seaports sufficiently developed, ice-free during winter, and convenient to rail transportation from all parts of the Dominion was a marked factor in Canada's important share in the waging of the war," said Mr. Fisher. "It has been realized by Canadians as never before, and especially I think by Western and Middle Western Canadians, that without these splendid seaports, the gateways of our splendid transcontinental transportation systems, we could not have sent our troops our munitions output, our many lines of war supplies across the Atlantic to the Old Land and Europe. The ports of Halifax and St. John are not fully-developed, but the fact that we had them was sufficient and they served, and are still serving well. They are worthy of greater development and are getting greater development, especially Halifax

(Continued on page 80.)

News of Interest to Canadian Exporters

INQUIRY FOR ZINC SHEETS FROM CANADA

W. J. Egan, Canadian Trade Commissioner, Cape Town, writes asking if there is any possibility of securing at any time in the near future zinc sheets from Canada. In explanation of the above question, Mr. Egan states that these sheets are used extensively in the gold mines in the Transvaal. The quality as used there is Z. A. 99.20, iron and arsenic with only a trace of lead. The less lead there is the better.

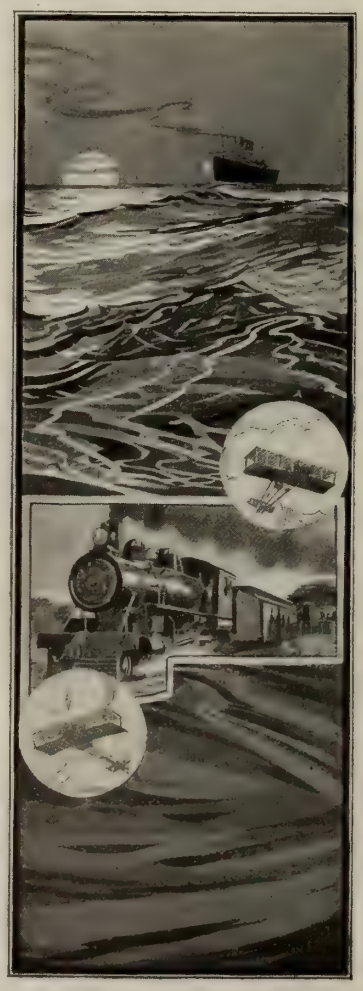
BETTER CONDITIONS IN ARGENTINA

Argentina is now in a splendid economical position as compared with what it was a few years ago. She is selling more to her creditors than she can buy from them, and without doubt Argentina's now favorable trade balance will continue and steadily improve.

Business failures during 1915 showed a decrease. It is satisfactory to note that in spite of the war British manufacturers and exporters continued during 1915 to do more business with Argentina than other nations. Especially can this be said in reference to the Rosario district, where the presence of British houses, British banks and British railway companies, give commerce of Great Britain an important advantage.

MEDIUM-PRICED POCKET KNIVES IN RUSSIA

According to a U. S. Consular report, the pocket knives in greatest demand in Moscow are those of medium price, wholesaling at $5 to $10 per dozen; they are 3 to 3½ inches long, both with and without corkscrews, and with 2 and 3 blades. The wholesale prices of knives in general range from $2.50 to $25 per dozen, and the retail prices are about 50 per cent. higher than the wholesale.



It is stated that 90 per cent. of the knives on the market are supplied by Russian manufacturers. Most of them are simply and strongly made, and are cheaper than those of foreign origin. A few knives are purchased from England, but most of those from abroad came from Germany. A large firm in Moscow states that it would be glad to receive illustrated price lists from American knife manufacturers. This firm suggests that, inasmuch as the simplest and cheapest knives are of Russian manufacture, it would be advisable to send quotations particularly on medium and high-priced knives, such as those with horn, tortoise-shell, mother-of-pearl, and ivory handles. The annual turnover of pocket knives is estimated at $25,000 to $150,000 annually.

IMPORTS INTO NEW ZEALAND

In New Zealand, a country of one million population, the Government successfully floated the largest loan ever placed in the local market. In ten days ten and a quarter million sterling have been subscribed. Four millions were received from the banks and six million from various companies and the general public. The following list shows some of the articles imported into New Zealand from all countries during the seven months ended July 31, 1916. It will be observed that imports are steadily on the increase.

	7 Months 1916.	7 Months 1915.
Hardware—		
Cement	£ 566	£ 4,246
Hardware	201,446	149,261
Iron—		
Bar, bolt, rod	137,062	83,723
Corrugated sheet	167,854	119,464
Fencing wire	76,375	43,114
Barbed wire	14,491	22,651
Pig and scrap	22,203	25,632
Pipes and fittings	144,853	123,594
Lead	23,784	22,631
Machinery—		
Dairy	41,245	25,871
Agricultural	61,236	47,051
Electric	268,120	181,506
Engines, gas, etc.	36,555	66,653
Mining	10,205	24,117
Sewing	30,564	30,468
Nails	50,878	31,544
Railway and tram. plant.	67,034	110,359
Tin, sheet and block	112.040	66,172
Tools	71,382	59,578
Oils—		
Benzine	263,499	256,966
Kerosene	91,525	114,189
Castor	14,910	18,420
Linseed	39,268	25,551
Turpentine	14,958	8,880
Other	76,587	39,776
Paints, colors, varnish	121,023	86,985

Please note above amounts are in pounds.

MARKET FOR CANADIAN GOODS IN ECUADOR

H. M. Wilson, the British Consul at Guayquil, writes under date of September 2, 1916, that there is a good opening in Ecuador for the following articles:—

Bentwood furniture, toys, canned salmon; canned lobster.

In referring to the above list the British Consul says these articles might be well supplied by Canadian manufacturers and that he would suggest the firms who are interested in extending their markets, should communicate direct with British firms at that port all of which are first class, having their own travelers in Ecuador and are thus in a good position to introduce Canadian goods to that market. The addresses of the firms referred to may be had on application.

THE IMPORTANCE OF SEAPORTS

(Continued from page 79.)

—and St. John will be developed more later on. Of course, a considerable share of Canadian export and maritime traffic passed via the United States ports in peace time, and is still passing through these ports, but as every Canadian understands to-day, not a soldier, not a shell, no consignment of munitions of war or equipment of any kind could travel via the United States ports in time of war. This brought into emphatic prominence our Maritime Province seaports, and shows their value to Canada in manner never to be forgotten. In the development of Dominion industrial activity and coming export trade the importance of these ports cannot be over estimated."

The Paint Industry Very Active

The Conditions Which Have Brought Increased Production—Possibilities of Enlarging Export Trade After the War—Past Year Has Seen An Increase in Exports

SOME export business is being done in paint, some of the Canadian paint manufacturers having established more or less extensive connections abroad. This trade is confined very largely, however, to other parts of the British Empire. At present the domestic demand bulks almost exclusively in the paint industry, but it is quite possible that the future may see a larger development along export lines. Certainly, the period of reconstruction that will follow the cessation of hostilities will find a large demand for paint abroad and it is quite within the range of possibilities that a large share of this trade will be secured by Canadian firms.

In the meantime, business in Canada is brisk in the paint industry. The cessation of building operations following the depression of 1913 and which became more pronounced with the outbreak of the war, was the cause of the lessened activity in the paint business. The recovery was gradual. Following the depression that set in with 1913, the poor crop of that year accentuated the general condition. An improved, but still poor, crop in 1914, heightened a condition which the war made worse. In 1915, however, the arrival of the best crop ever harvested in this country proved the turning point for the industry.

Low Stocks and Large Crop

It was at this point that the condition of low stocks throughout the country operated in conjunction with the large crop to reverse conditions. From having been at a low ebb in 1913 and 1914 business became very active in the fall of 1915, with the result that the manufacturers have had one of the best years in the history of the paint and varnish industry in Canada. Again, the high prices that followed combined with the demand produced by munitions orders that ran into many millions to heighten an already prosperous condition.

Demand of Railroads

The combination of a large crop and activity in munitions had a corresponding effect on railroad earnings. As the railroads constitute a very important factor in the paint market, the effect of this was felt at once in an increase in orders from that quarter. Wages began to advance at this time so that the prosperity began to take on a national character in its scope. To-day the demand from the railroads is very large. Although there is a limited amount of new railroad work, the abnormal demand on the roads has called into service all available equipment, so that an unusual amount of the manufacturers' product is absorbed in that quarter.

Munitions Orders

By the time the conditions previously referred to had come into force the full effect of munitions orders was being felt by the manufacturers. Although the figures have never been published, HARDWARE AND METAL is informed by the leading manufacturers that the total has been a very large one.

House Paints Only Decline

House paints and varnishes, however, have continued to find a dull market up to the present. It nevertheless remains the principal outlet of the industry, although the others have changed in relative importance both to it and to one another. On the other hand, collections in this department which is of course dependent on the retail trade, have steadily improved during the past year and in that respect at least this branch of trade shows considerable improvement.

The dependence of this branch of trade on building operations had always in the past governed the conditions prevailing in the industry. The entrance of the new factors have materially altered the whole situation. The Western business has also attained a healthy condition and ranks next to railroad demand in importance. Marine demand is another very strong factor in the market and promises to become more so if the present shipbuilding activity expands into a permanent industry of any importance.

High Cost of Chemicals

The advancing cost of raw material and increasing shortage in some lines, has, of course, played an important part in the developments of the period under discussion. Advances have been so irregular and so abnormal that an estimate of their average is impossible. Enough time has elapsed, however, to permit of a certain amount of substitution and the more important concerns are now engaging in the manufacture of certain chemicals that were previously imported. The manufacture on a large scale of bi-chromate of soda is a case in point, and is taken as an indication of a growing tendency in this respect which may lead to other and more important developments as has occurerd in the United States.

Imports of paints and colors for the last ten years up to March 31, 1916, and exports for the last five years are as follows:

Year.	Imports. Amount.	Exports.
1906	$1,382,608	$ .....
1907	1,125,264	.....
1908	1,520,949	.....
1909	1,134,997	.....
1910	1,386,907	.....
1911	1,594,934	106,260
1912	1,760,126	115,657
1913	2,403,011	166,545
1914	2,167,440	175,723
1915	1,568,867	212,167
1916	2,056,085	371,086

These figures show the tendency noted in most lines of manufactured goods in Canada to show a shrinkage of imports with a corresponding rise in the volume of exports since the war. Thus for 1916 the imports were $487,218 greater than in 1915, but are $111,355 less than in 1914.

Exports for the year ending March 31, 1916, were $371,086 and including shipments to Great Britain, United States and Newfoundland. In contrast to this is the fact that shipments since that period include practically all parts of the British Empire and South America, and although figures are not obtainable, an approximate estimate would show a much larger increase. An active trade has been established with South Africa, British West Indies, South America, Australia and New Zealand. In all these countries German lines have been supplanted by the Canadian product.

As to the Future

H. M. Ashley, general manager of the Sherwin-Williams Company of Canada, makes the following statement with reference to future developments:—

"The line is in a promising condition, although it continues to be an uncertain one in some respects. All material is away up and there will not be the same margin of profit as has prevailed during the period of advances while some old stocks are still on hand. This, of course, will be a very important factor. There is also the increasing scarcity of material and rising cost of labor.

"The consumption of paint by manufacturers appears to be the dominant factor in the situation. Previously a factor of minor importance, it is now one of the biggest and will soon rank next to house painting in importance. The latter should soon show signs of picking up. It has held off about to the point where it must come into the mar-

ket for pressing needs. The expansion in the manufacturing demand is much larger than is generally supposed. It takes many forms other than munitions making and includes even toys, in a small way.

Export Business

"The export business which has never been very large, has expanded considerably in the past year. The extent of it in the future will doubtless depend upon the extent to which the proposed Imperial tariff arrangements go. A development in this respect is the sale of fancy dry colors in markets previously held by Germany and England. The latter continues to take what part of this business she can care for and the balance largely reverts to Canada."

SPRING BALANCES

John Chatillon & Sons, 85-95 Cliff street, New York, have issued an attractively illustrated catalogue featuring their various lines of spring balances and scales. Copies will be mailed on request.

Auto Accessory Jobbers Organize

Meeting Held in Toronto Attended by Canadian Jobbers of Auto Accessories—Intends to Carry Out Plank in Platform of American Organization.

A NEW organization called the Canadian Auxiliary, The National Association of Automobile Accessory Jobbers, has been formed, with headquarters at Toronto. The new organization is to work along lines followed by the American organization.

In response to a call issued to the various jobbers throughout Canada, for the purpose of forming a Canadian auxiliary in connection with or to the National Association of Automobile Accessory Jobbers, the automobile accessory dealers from the different sections met at the National Club, Toronto, on October 20, and on temporary organization, J. E. Millen, of Jno. Millen & Son, Ltd., was elected temporary chairman. A roll call showed the following present:—

J. E. Millen, John Millen & Son, Limited, Montreal, Que.; A. J. Hopkins, Canadian- Fairbanks-Morse Co., Limited. Montreals, Que.; F. S. Evans, Evans & Son, Windsor, Ont.; G. M. MacWilliam, Hyslop Bros., Limited, Toronto, Ont.; E. P. Cairns, Northern Electric Co., Toronto, Ont.; F. Oliver, Wood, Vallance & Co., Hamilton, Ont.; W. L. Moncor, Cutten & Foster, Toronto, Ont.; M. C. Merriman, Northern Electric Co., Toronto, Ont.; Frank E. Page, Hyslop Bros., Toronto, Ont.; Albert M. Bottcher, Hyslop Bros., Toronto, Ont.; J. A. Bennett, J. Millen & Sons, Ltd., Toronto, Ont.; E. G. Weed, Canadian National Carbon Co., Toronto, Ont.

A committee on by-laws and permanent organization was elected, who subsequently reported the following, who were duly elected:—

J. Ernest Millen, Chairman, John Millen & Sons, Limited. Montreal, Que.

F. G. Robinson. Vice-Chairman, Canadian-Fairbanks-Morse Co., Limited, Winnipeg, Man.

G. M. MacWilliam, Sec.-Treas., Hyslop Bros., Limited. Toronto, Ont.

A. J. Hopkins, Chairman Membership Committee, Canadian-Fairbanks-Morse Co., Limited, Montreal, Que.

F. Oliver, Membership Committee, Wood, Vallance & Co., Hamilton, Ont.

L. C. Cavanaugh, Membership Committee, Motor Car Supply Co., Calgary, Alta.

F. S. Evans, Membership Committee, F. S. Evans & Son, Windsor, Ont.

The Board of Directors includes the executives and chairman of the committees, Messrs. Millen, Robinson, MacWilliam and Hopkins.

Wm. M. Webster, Commissioner of the National Association of Automobile Accessory Jobbers, Chicago, was present and assisted in the formation of the Canadian Auxiliary.

The constitution and by-laws of the National Association were adopted in so far as it might apply to the local organization, with, however, only such local modifications and changes as were necessary, it being understood that the organization will at all times work in complete harmony with the national body.

A discussion took place as to how, in local matters and various sections of Canada, the territory being of wide area the interests of members could best be served. It was concluded to operate in a divisional way, something after the same fashion as on the Pacific Coast, having for the East, Montreal and points in that section, while the central portion would cover Toronto, Hamilton and points in that locality, while Winnipeg, Calgary, Saskatoon and Western points, would be covered by the Western division. The idea being that in matters of local nature or incident to the respective sections, same would be handled by members in such sections speedily and without sacrifice of time and expense of the entire body.

Officials of the new organization state that it intends to carry out in every sense, the plank in the platform of the National organization in reference to assisting the trade and it is the purpose of the Canadian auxiliary and its subdivided sections to give time, care and study to the interests and development of the retail trade, with a view of making the dealer and garage man more proficient, their places of business more inviting, with the ultimate result that profits will be materially enhanced and indirectly the jobber and manufacturer benefited.

Matters pertaining to credits, trade conditions, and other abuses of a local nature were taken up and discussed, and ways and means provided to properly overcome them.

TO DEVELOP NEW INDUSTRIES IN CANADA

From *Birmingham Post* (Eng.)

An English metal merchant who has a branch in Canada, tells me that during the war he has been supplying a large part of his customers' requirements, both here and in overseas Britain, from United States sources. His experience is that Montreal easily competes with New York in selling to Australia or South Africa, even when American produce is concerned. The explanation is that New York merchants do not appreciate the essential conditions of export trade in the matter of make-up, packing, handling of shipping documents, and details of credit. He scouts the notion that American traders have taken over en bloc the German method of entering new markets, and finds among them the same disinclination to depart from the beaten track that characterises some manufacturers nearer home. My informant expressed the view that the munition factories which have been established on Canadian soil will be a valuable nucleus for the development of new industries in the Dominion, and that the connections which are being established with other parts of the Empire will permit of much useful consolidation in the Imperial interest later on.

CATALOGUES AND BOOKLETS

B. T. Water Bowls

Beatty Bros., Ltd., Fergus, Ont., have issued a neat illustrated booklet featuring their B. T. water bowls.

Power Hack Saws and Grinders

The Perfect Machine Co., Galt, Ont., have issued a catalogue dealing with an interesting line of power hack saws, grinders, lathes and drills. The various types of machine are illustrated, accompanied by a specification of each and the principal constructional features.

A prize-winning window in Hardware and Metal's contest. One of the finest hardware trims ever seen in a Canadian store.

Christmas Window Contest

FOR *many years past it has been customary for* HARDWARE AND METAL *to conduct a Christmas window display contest each year. The contest has become an event of wide interest for all Canadian retail hardwaremen interested in window trimming, and each succeeding competition has been keener and each year has seen a wider and more representative response culminating in the big success of last year.*

In accordance with past custom, two contests will be conducted this year—one for stores in places under 5,000 population; the other for places of 5,000 and over. No restrictions will be set on the style of display or the goods used in the arrangement, except that each window must be arranged with goods for the Christmas trade.

Eight prizes will be offered as follows:—

PLACES OF 5,000 AND OVER		PLACES UNDER 5,000	
First Prize	$10.00	First Prize	$10.00
Second Prize	5.00	Second Prize	5.00
Third Prize	3.00	Third Prize	3.00
Fourth Prize	2.00	Fourth Prize	2.00

Contestants will note that an equal number of prizes are offered to the small town window trimmer as to those in the larger towns and cities.

The contest closes on Monday, Jan. 1. No photos received after that date will be entered unless there is proof that they have been delayed in transit.

All matter should be addressed to "The Editor, HARDWARE AND METAL, *143-153 University Avenue, Toronto," and marked "For Christmas window -contest."*

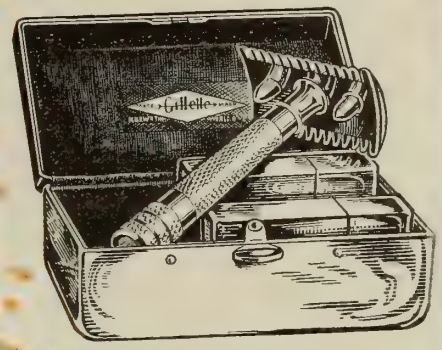
The Sun Never Sets on the Gillette Safety Razor

"Made in Canada"

Standard throughout the British Empire

When British troops from the ends of the earth fraternize overseas, they soon find one thing in common —the Gillette Safety Razor. The "folks at home," mindful of their comfort, have supplied thousands of the men with Gillettes—purchased perhaps in Great Britain, or in Canada, Australia, New Zealand, South Africa, India, Newfoundland, or the islands of the sea—but nearly all made in Canada.

The remarkable service which the Gillette Safety Razor is giving under the extreme conditions of war has done wonders in consolidating its position as the world's most popular razor. As a natural result, the demand from all quarters for both razors and blades has grown enormously, and to meet it we have more than doubled our capacity.



Back of the Gillette Safety Razor is a strong, progressive business organization, with great factories in the United States and Canada, and distributing points in the larger cities of the world. Manufacturing facilities are unsurpassed, and behind all, giving life and vigor to the whole Gillette business, is a keen, aggressive, continuous advertising campaign that keeps the goods moving and the demand steadily growing.

The Sun Rises Daily on 7,000,000 Gillette Users

Every one a "Booster"
And a Steady Customer for Blades

The Gillette is a permanent factor in the lives of increasing millions of men—and a permanent success! It is rapidly absorbing a larger and larger percentage of the razor business, and the enormous and never-ending demand for Blades gives the trade in Gillettes a steadiness most desirable for Wholesaler, Exporter or Importer.

The Gillette Safety Razor Co. of Canada, Limited, is particularly interested in extending the business in Australasia, South Africa and other parts of the British Empire. We have been shipping to these countries for some time, and are familiar with their tariffs and the need of special packing for the goods for the long ocean voyages. All our cases are tin-lined and hermetically sealed to prevent rust from humidity. The covers are securely strapped and wired, and the boxes in toto fastened with the Glardon Safety Clip, which prevents pilfering en route.

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVIII. TORONTO, NOVEMBER 4, 1916 No. 45

AS A comparatively newcomer in the export field, Canada is doing pretty well.

* * *

GERMANY is losing interest in French real estate and is letting some holdings go.

* * *

THE FAVORABLE balance of trade indicates how prosperous Canada has been the past year.

* * *

IF ANY advantage could be seen in the war at all it would be in the favorable balance of trade it has brought to Canada.

* * *

THE HIGH Cost of Living cannot any more be put down as the Cost of High Living. It has become a very real and serious problem.

* * *

IN THE City of Toronto with a population of about 500,000 there were 1,059 arrests for drunkenness in one month from Sept. 15 to Oct. 15, 1915, under the license system. During the corresponding period of this year under prohibition, the number had decreased to 214. The city police force is doing its work efficiently with 100 men less than under the license system. Toronto is the largest city in the world under prohibition. Prohibition is doing good work. Incidentally it is making business better for the grocer, clothier, dry goods merchant, hardwareman and other lines of trade.

CANADA'S EXPORT TRADE

THE war presented an opportunity for Canada—the chance to capture a larger share of export trade. With the combatant nations too busy to keep up their trade connections, too busy in some instances to supply their own demands; with the British fleet blockading every outlet from Germany and keeping everything made-in-Germany off the markets of the world; with demand in most lines far exceeding supply; with all these factors working to create an unprecedented opportunity, Canadian manufacturers found the markets of the world open to them.

That they have taken advantage of this remarkable situation is evidenced by the leading article in this issue, which tells what has been done in the matter of gaining export trade. In hardware and kindred lines there has been marked activity and manufacturers have been carrying their lines into foreign markets with aggressiveness and initiative.

The figures quoted in our leading article demonstrate how enormously Canada's export trade has advanced. The spectacular increases made are due, primarily, of course, to war orders, and it is not to be expected that after hostilities cease it will be possible to maintain this large volume of export trade. A substantial proportion of our exports, however, is made up of manufactured goods for peaceful purposes and it is quite reasonable to assume that this part of our trade abroad will be stoutly maintained. In fact, with the prospect of a heavy demand from Europe in the reconstruction period following the war, it is quite within the bounds of probability that Canadian manufacturers will not only hold their ground, but increase their exports of manufactured goods. The initiative and foresight that they have demonstrated in the face of war conditions, will, when applied to the post-war situation, result in a wider sale of Canadian goods on world markets.

The avowed intention of the Allies to hold together after the war will prove a powerful lever for the building up of Canadian export trade. The huge Russian market, formerly monopolized by Germany, will be thrown open to the allied countries and a great opportunity will offer there for Canadian enterprise.

So much for the future. It is impossible to make predictions with any degree of assurance, but an attitude of optimistic faith in the ability of our manufacturers to grasp the opportunities of the future can safely be adopted.

And, in the present, the story of our remarkable advance into the export field, as told in the leading article, is one well worth reading. It not only reviews the general field, but tells a number of stories of how individual firms have sold their goods in the

far corners of the world. The figures given are worth very careful study, for they demonstrate the remarkable change that has come over the face of Canadian industry.

THE IMPORTANCE OF BUYING

A CHANGE has come in the problems of merchandizing during the past two years. It used to be said that goods well-bought were half sold. This, like many other proverbs and wise saws, was only a half truth; for it was very often demonstrated that goods shrewdly bought could clutter up the store shelves and collect dust, for years, when the selling initiative was not there to keep things moving. Most hardwaremen recognized this and were inclined to give more attention to the selling end than to the matter of buying. This tendency was accentuated by the comparative steadiness of hardware prices. When conditions were normal the prices on staple lines did not change often and buying problems, therefore, narrowed down to an appraisal of what could be sold most readily and profitably. It is not intended to assert that the average hardwareman was not a shrewd buyer. On that point the evidence of the hardware travelers *en masse* would show that hardware merchants have always known how to buy and when. There was nothing off-handed or easy-going in hardware buying. It was close, shrewd business, figured down to the very best discounts. But business conditions were such that merchants realized and acted upon the knowledge that they had to concentrate more on the selling end in order to score a success.

Since the war knocked all previous price standards endways by upsetting trade equilibrium, by augmenting demand for certain lines and by shutting off certain important sources of supply, the buying end of the retail business has become the all-important one. The hardwareman has seen most staple lines rise by leaps and bounds to prices that would have been deemed impossible two years ago. He must buy to-day on a market decidedly unsettled. It follows that there has been always before him the opportunity of big profits if he judged well and the possibility of grave losses if he failed to size things up accurately. As things are to-day, goods well bought are more than half sold.

In order to buy well the hardwareman now has to follow market conditions very closely. He must know how the Argentine flax crop promises and what is transpiring on the primary copper markets. If he watches the market closely enough, he will be in a position to anticipate advances by early buying or get the benefit of impending slumps (when there are any), by "watchful waiting." It may also be pointed out that HARDWARE AND METAL has met the new buying conditions by very materially enlarging the market service given to readers. It has been possible for the hardwareman to keep fully alive to buying problems by following the weekly reports in HARDWARE AND METAL. Times, without number, price changes of importance have been preceded by early and accurate predictions in Canada's only weekly hardware publication. This statement is not made with the purpose of "boosting" this paper, but rather to demonstrate to such merchants as may not have availed themselves fully of the service given, the importance of following the market pages.

THE HIGH COST OF LIVING

THE public is beginning to growl. With the high cost of living getter higher all the time, Mr. Average Man is looking soberly at his depleted earnings and beginning to think and talk "combines." Recently a deputation went to Ottawa to urge the Government to take action on this question of the H. C. of L. The problem is more one of foodstuffs and clothing than of hardware, but, of course, most lines passed over the hardware counter are higher priced and the hardware merchant as a result is involved, in some degree, in the situation that may arise.

It is a difficult matter, nay an impossible one, to find all the factors contributing to the very serious increases in living costs. Shortages of material and help and the resultant high prices and wages constitute the main factors. The abundance of money is another reason. People are in a position to pay well for goods and brisk demand is inevitably reflected in prices. It is probable also that somewhere along the line somebody is making a lot of money.

But it is not the retailer. In the mind of the public the suspicion undoubtedly exists that the merchant is benefiting by present conditions, but it is an unjust one. It is very doubtful if the average retailer is doing as well to-day as during more normal times. When prices advance, the retailer seldom does more than increase his selling price by the same amount that he has to add to his buying price. This would appear to leave him with the same profit, but in reality it gives him a smaller percentage; and, of course, profits are purely a matter of percentages. It has been demonstrated that the cost of doing business remains a certain percentage of turnover, no matter how much advances in price may increase the turnover. Wages go up and rents increase right along as fast as commodity prices go up. Thus, if a merchant does not maintain his percentage of profit during periods such as the present, he finds the higher prices not a source of increased profit, but actually the cause of more or less substantial loss.

Merchants should avail themselves of every opportunity to impress on the public that the increases are not of their making; that the reasons for present conditions can be traced all the way back to sources of supply; and that he, the merchant, is not reaping a big harvest at the expense of the public.

A good Fall window shown by Owen & Birmingham, Campbellford, Ont.; dressed by F. Menzies.

Getting Results from Hunting Display

Good Demand Can Now be Created for Sporting Supplies — A Display That Created Much Interest—Hunting Windows Have a Sure and Profitable Appeal

THE fall presents a wide opportunity for sales of sporting goods. When the cold weather draws on, the hunting enthusiast feels "the call of the wild" and at the first opportunity gets out with his rifle and dog. In fact, most men who like hunting, make it a yearly custom to leave their holidays until the fall and then spend the time on a trip north, or west, or wherever the best opportunity for sport presents itself.

The amateur nimrod is a lavish spender. He knows the equipment that he needs and is prepared to pay the price for everything. Get his interest really aroused—in a new rifle, or a cartridge belt, or a hunting bag—and he is never able to resist the lure. This is why a good hunting window in the fall is always a paying investment. Every sportsman in town sees it and spends a few minutes looking over the articles displayed. Almost invariably he sees something he needs; or, at any rate, thinks he needs. Leave the display in for several days and he will come past, and linger in front of the window every day. And finally he will come in and lay down the price for that article.

Above is shown a good hunting window used last week by Owen Birmingham, of Campbellford, Ont. It was dressed by F. Menzies, who has charge of their display work and who, by the way, has been making some extremely attractive and practical displays. In the first place, he secured the mounted game from a local hunter and taxidermist, a young man of eighteen years named E. Cross. This part of the display was enough in itself to attract attention, for the local sporting fraternity found much in the specimens to admire As an extra attraction Mr. Menzies secured a British 18-pr. high explosive shell and a Russian shell of the same size complete. Needless to say, these exhibits were of great interest to all who passed the store. As a background he filled in with sporting goods stock—shells, guns, heaters, flashlights, safety razors, gun polishes, even dog collars. Practically everything was shown, in fact, that could be needed on a hunting trip.

The display proved a profitable one, creating a good demand.

The hunting season will continue for some time and it is not yet too late to make effective use of your store windows to stimulate the demand. Perhaps the above display will contain some suggestions that might be followed out in arranging a display.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

ALTHOUGH the market this week has not been as active as last week, a number of further important price changes have to be recorded. All are in the form of advances. There is a scarcity of many hardware lines and deliveries are very slow.

The advances this week include higher prices on roofing nails, building papers, ready roofing, snow shovels, furnace scoops, food choppers, bread mixers, sash weights, both solid and sectional, oil stove wicks, cotton rope and twine, seine twine, sash cord, candlewick, pig rings, brass valves, iron pipe fittings, mortar stain, pine tar, awning cord, brooms, iron and steel products, agricultural wrenches.

Further advances are expected on galvanized sheets, wire nails and wire products, rivets, washers, spikes, bolts, cotton waste, glass.

MONTREAL MARKETS

MONTREAL, Nov. 1.—There has been a lull in the steady rush of hardware lines towards higher prices. It is not a reassuring lull. It is like the calm spell that comes suddenly in the midst of a storm. Iron, steel, and all the important metals are in steadily strengthening market, according to all reports. Further price increases are certain in the future. There is no feeling on the market that the top levels of prices for metal products have been attained. Certain formerly overlooked or lightly passed lines of goods show increases in price this week. The great main lines of staple hardware goods keep quiescent. There is a general rise in cotton twines and twine products, and then appears a determined increase in hay wire, just to show what the market means to do in all lines of metal products before the war is won and the world gets back to ordinary business routine, the routine that seems to all experienced business men so very far in the past. An increase in prices of soil pipe is predicted. Other pipe products will increase also in the opinion of the men most in touch with these lines. Never was there a greater scarcity of iron plates, tinned and terne plates. These are all exceedingly hard to get in any quantity at present. Tinned iron sheets in large sizes are scarcer than ever. In regard to general business, conditions are exceedingly active. There is a rush of orders for shipment before navigation closes on the St. Lawrence. These are for Quebec Province demand mostly. One leading firm in hardware has issued instructions to have no more orders accepted at old prices, even at the risk of losing business, should the prices trend down instead of up. There is little doubt but that all changes in price for a considerable time will still be "upwards, ever upwards," in the words of the versifier.

Iron and Steel Situation Strong

IRON AND STEEL.—Tremendously strong last week on account of hints that further immense allied orders were being placed, the market for iron and steel continues in even more adamantine condition this week, and there is no sign of any respite. It is next to impossible to get deliveries of products in anything like ordinary time limits. Months elapse before the mills can attend to orders that are not in the mighty munitions of war class. "It's getting worse every day," declared a prominent metal products merchant in Montreal the other day. "No signs of a let-up. Don't know where it's to end, or where it is leading to."

Scrap Iron is in Good Demand Now

SCRAP IRON.—There is a good demand for scrap iron at present, and smelters readily accept large quantities or small consignments of materials suitable for the needs of the market at present. For ordinary scrap iron at the foundry this week $16 to $16.50 per long ton of 2,240 lbs. was being paid. The higher price was paid for the larger quantity—that is, for consignments of not less than fifty long tons.

The continued scarcity of Canada plates is commented upon. Quotations are practically nominal for these, as the market seems all but bare of them. The English manufacturer is sending fewer and fewer. Tin and terne plates are equally scarce, hardly to be found. The prices for U. S. cokes, as given in current quotations, are the market values to-day in Montreal.

Tinned Iron Scarce

Large sheets of tinned iron are exceedingly scarce on the market at present. They are, in fact, hardly obtainable. The reason for this is the fact that the British Government has insisted on the export of these under license only, and the continual prospect of the withdrawal of the license privilege hampers development of export trade enough in England to meet Canadian demand at present.

Galvanized Sheets Firmer

A slight increase in the prices of galvanized sheets noticed in the United States has not as yet been reflected into the market for these in Montreal. The market is very firm, however, on account of difficulty with raw material supplies. The demand is, however, not active, owing to small extent of building operations, and, consequently, increase of price is not immediately following increased cost of production.

Soil Pipe to Increase

New prices on soil pipe are expected before very long. The generally firm condition of the iron and steel market accounts for this increase, which will be in keeping with the percentages of increase in iron products of late.

Hay Wire Up Again

A further increase is noted in the price of hay wire, the increase amounting to 10c on the No. 13 and correspondingly for the other numbers quoted. No. 13 is now $4.30; No. 14, $4.35; and No. 15 is $4.45.

Door Checks and Springs Up

A general rise of 5 per cent. on all lines of door checks and springs has been recorded in the hardware trade in Montreal. These have advanced in accordance with the conditions in the iron and steel market.

The Stove Price Problem is Acute

STOVE PRICE PROSPECTS.—Stove manufacturers are up against the prob-

lem of tremendous increase in the cost of every single raw material used in their product, and yet of conditions of demand so precarious that it would be impossible to raise the price of stoves in proportion to the increase in materials, and at the same time secure enough business to keep the works warm. There is, therefore, a very prevalent opinion amongst leading stove manufacturers that the cost of stoves of all kinds will not go very much higher in spite of conditions as regards iron and steel, etc. Not at least for the present, since most manufacturers are well stocked with materials for the coming year's trade. After that who can tell? The war may be over, and new trade conditions coming into swing. But the stove market is worth watching closely in case of something sudden occurring.

Copper Gains Strength Still

COPPER.—The market for copper has gone from firm to firmer since last week. Demand for the metal is continual. Enormous quantities are being mined and refined. The munitions industries absorb all that can be given them. Prices for copper in Montreal at present are 33½c to 34c, and there is every chance of these quotations going higher.

Lead is Strong

LEAD.—The condition of the market for lead in Montreal at present is described as very strong, indeed, by those in close touch with the market. Quotations continue as last week's at $9.75 to $10. Demand is strong.

Tin Keeps Steady

TIN.—From a condition of increasing strength last week tin has for the present steadied into a state of firmness at prices as last quoted. These ranged from $47.50 to $48. The market for tin, which is not affected except adversely by the war, has seemed of late rather inclined to revive towards pre-war conditions. Demand is certainly better than it was some time ago.

Zinc and Spelter Firm

ZINC AND SPELTER.—Sheet zinc is quoted for the present week at 25c and 25½c, which is about the same as last week's prices. Spelter at $12.75 to $13 is in slightly firmer market. Demand for zinc for galvanized wares keeps up, and manufacturers of these lines report firm conditions of market in securing their supplies.

Solders and Antimony Firm

ANTIMONY AND SOLDERS.—The market for antimony has been sluggish, but prices maintain as last week, with no very strong demand. Solder also is in quiet market, with prices firm at 30c for tinsmiths' and 28c for wiping solder.

Enamelled Ware Still Steady

Although increases in the cost of enamelled ware have been anticipated, this week sees no change in the prices or the discounts on these lines in the Montreal trade. Cost of manufacturing materials keeps on the firm trend, however.

No Advance in Tinners' Trimmings

Tinners' trimmings have also been in the limelight of expected increased price. So far, however, prices maintain as in current quotations.

Netting Discounts Differ

It will be noted that in current quotations the discount for poultry netting is put at 30 and 10. This is correct for Canadian poultry wire netting. The American product is at 30 straight.

Linseed Oil Away Up

In the hardware trade the market for linseed oil reflects rise for rise, the tendencies of the primary market and the paint trade. As regards linseed oil, the market is sky-high, and quotations in the hardware trade for small quantities (up to one barrel) are: Raw linseed oil, $1.15 gallon; boiled, $1.18 gallon.

Above prices are subject to 2 per cent. off and 30 days, but quoted in midweek were liable to instant alteration at any time owing to the state of the market. Further information on the oil and paint situation is given in the weekly paint market elsewhere in this issue.

Cotton Twines All on the Increase

COTTON TWINES.—A general run of increases in price comes to be recorded this week. Cotton fishing twine No. 6 is now 43½c per pound. No. 9 is 38c. No. 12 is 13c. Nos. 15 to 36 are 36½c per pound. Nos. 42 to 100 are all 36c. The steady increase in the price of cotton accounts easily for the advance.

Clothes Line Also Up

Cotton clothes line is up again in the following degrees:—30 ft. lines, per doz., now $1.32; 40 ft. lines, $1.60; 48 ft., $1.90; 60 ft., $2.35; 72 ft., $2.85.

Wrapping Twine Up

In accordance with the general increases in twines for this week's markets, wrapping twine shows increased prices. No. 3 (b.c.) is 36c, and No. 4 is 40c per lb. This refers to twine in either balls or cones. The whole line has been steadily rising for weeks. It used to be as low as 22c.

Candle Wick Goes Up

Candle wick has joined in the general advance of the cotton twine products this week, and quotes now at 37c to 37½c per pound.

Chalk Lines Up Also

Masons' chalk lines are also higher in price this week. Nos. 27 to 45 are at 47c per lb. Some firms quote 45c for chalk lines. Both prices are above former quotations. Yellow chalk line (masons) is quoted at $1.24 for No. 24 per box of a dozen hanks, and white No. 15 is $1.10, while white No. 24 is at $1.25 per box of a dozen.

Hercules Sash Cord Up

Price changes in Hercules sash cord announced are: No. 6, 42½c per lb.; No. 7, 41½c per lb., and Nos. 8-12, 41c.

TORONTO MARKETS

TORONTO, Nov. 3.—The market is still an advancing one. Shortages in goods continue to be increasingly large in number, with promise of becoming still more acute. "It is strange what small factors operate to hold up the entire product," said the representative of one large wholesale house. "For instance, any machine that has ball bearings will be slow on delivery and short on supplies. Formerly the steel balls came from England and Germany. Now Canadian manufacturers must depend on the United States mills for these and the demand has been so inordinate that they have not been able to come anywhere near meeting it. This one part is in many cases the deciding factor to keep all the rest of the machine from the market."

There are many unusual factors influencing the market these days. Price changes occur with uncanny frequency.

Ingot Metals Are All Holding Firm

The metal situation has not been marked by any important features during the week, although the general conditions are somewhat disturbed by the political situation in the States. Copper is quiet and firm, with further buying imminent. Tin is irregular, but firm. Spelter is quiet after recent activity. Lead is steady, but with an easier tendency. Antimony is quiet, but firm. Aluminum is easier.

Copper Strong.—The copper market continues strong. The abnormal consumption is due to demands for munition purposes. Production in the U.S. is said to be from 40,000,000 to 45,000,000 pounds per week. Quotations remain unchanged at 30-31c. lb.

Tin Market Quiet.

Tin Unchanged.—Tin locally has not changed in price. The market is rather quiet. Reports from New York state that some sellers do not wish their prices to become known and are making special prices direct to buyers against special inquiries, thus nominally holding up the market while they take care of special customers. Local quotations are firm at 47c. lb.

Spelter in Better Demand.

Spelter Moving.—The demand for spelter has been more active of late and the market continues firm. U.S. reports that producers are not willing to sell a good line of spelter at current prices and buyers are put to the necessity of picking up spelter here and there to fill their requirements. Prices locally are firm at 12 to 13c.

Lead Remains High.

Lead Firm.—There is no change to report in prices of pig lead. Local demands are fairly heavy. Reports from New York indicate that inquiries have fallen off but should improve after the Presidential election. Locally quotations remain at 9¼c. lb.

Antimony.

Antimony Quiet.—The market is quiet after the short period of brisk buying. Inquiries are light, but the situation is firm. Quotations are steady, both on the New York and local markets, dealers here are quoting 18c.

Aluminum.

Aluminum.—Demand has shown slight improvement and the market is steady with quotations unchanged at 68c. per pound.

Scrap Metals Firm.

Scrap Metals.—The market is very firm all along the line and advances have to be noted in some grades of scrap copper, affecting crucible, heavy, copper wire, and machine composition. Heavy melting steel continues in good demand with a shortage of supplies. Steel turnings are in good supply, but there is very little market for this material.

The following prices are quoted for scrap metals: Copper, 19½ to 23c.; copper wire, 23c.; new brass clippings, 15c.; No. 1 brass turnings, 12c.; steel, low phosporous, 14c.; boiler plate, 10½c.; rails, 15c.; axles, wrought iron, 19c.; malleable scrap, 11c.; heavy lead, 6½-7c.; tea lead, 5-5¼c.; scrap zinc, 7-7¾c.; aluminum, 30-35c.

Many Cotton Goods Record Further Advances

Sash Cord.—In keeping with the high price in the raw cotton many lines of cotton goods carried by hardwaremen have advanced during the week. Among these are sash cord, cotton rope, clothes line, seine twine, awning cords and cotton gloves. In sash cords Nos. 8 to 12 are now quoted at 41c. to 41½c. per pound, No. 7 at 41½c to 42c per pound, and No, 6 at 42½c. to 43c. per pound. Two other lines that have also advanced are wicks for oil stoves and cotton candle wick. Raw cotton at the time of writing is quoted at 18.6c. per pound and appears to be headed for the 20-cent level. Other lines are expected to advance in the near future.

Cotton twine has also taken another move upward and the price that is now being quoted: 3-ply, 32½c. to 40c.; 4-ply, 35c. to 42½c.; 5-ply and up, 35½c.; variegated, 40½c. This represents an advance from 1½c. to 2½c. per pound in certain instances. The new prices on cotton rope are: 1-16-inch, 34½c.; ¼-inch and up, 33½c. Prices on cotton goods are no longer guaranteed by the mills. They will take orders only subject to changes that may be necessitated to protect themselves in the face of an advancing cotton market.

Cotton Waste Due to Go Up.

While the price of cotton waste has not been increased at the time of writing there was a strong possibility that it would be advanced in the neighborhood of 1c. per pound at the beginning of next week. Business has been exceptionally good in all cotton goods lines. People are willing to pay the increased prices and are evidently anticipating their needs some time into the future, as fairly heavy stocks are going out.

Firmness in Market For Sisal Products

Rope and Twine.—The market for rope and sisal twine is somewhat unsettled. In the United States market there are signs of weakness in the cordage market for Manila rope as some price cutting has been going on there. With the strength that has developed in the sisal products local dealers are not looking for higher prices in Manila rope. There is anticipation of higher prices for sisal twines, however, in view of the fact that the Yucatan Government is talking of making a basis of 12½c. per pound on the sisal fibre. The price that binder twine manufacturers paid last year was in the neighborhood of 10⅜c. If this price is adhered to it will mean higher priced binder twine next year. The manufacturers of binder twine will soon be in the market now to purchase their yarns for next season's binder twine. There still continues to be a big demand for Indian hemp twine, used on express parcels. African hemp twine has had large sales this year for the same purpose and in this way has helped out in the supply of the market formerly looked after by the Indian hemp twine alone. Prices are shown in current quotations.

Snow Shovels Advance in Time For Winter Trade

Snow Shovels.—In keeping with the recent advance in shovels, scoops and spades of various kinds, snow shovels have advanced during the week to $2.90 per dozen for the ordinary long-handled variety. The former price of this particular grade was $2.15 per dozen, the advance, therefore, being 75c. per dozen. Other lines of snow shovels have increased in price approximately 10 per cent. The advance comes in good time to meet the winter demand. The head of the average household will have the fact to ponder over that it will even cost him more to shovel his snow this winter.

Food Choppers Follow Up.

Not content with the high price of food it has even been found necessary to send up the price of the articles that prepare it. Food choppers of all kinds have advanced during the week in the neighborhood of 10 per cent.

Roofing Nails Up 50c.

In harmony with the advances recently recorded in all lines of wire nails and cut nails the price of American felt roofing nails has advanced 50c. per keg during the week. Quotations are now $6.95 per 100 lbs.

Galvanized Shingles and Siding Firm in Price

A recent advance in standard galvanized metal shingles makes the new price $6.50 per square and the standard painted $4.50. In the metal siding manufacturers are quoting the standard galvanized at $5.70 and the ordinary at $5.25. The painted standard is quoted at $4 and the ordinary painted at $3.75 per square.

Ready Roofing Goes Up 10c to 15c Per Roll

Roofing.—Local wholesalers have advanced the price of ready roofing from 10c. to 15c. per roll, according to the weight and quality. This advance is in keeping with the general upward trend of prices in almost every line. One of the big factors that is pointed out as operating to send prices upward is the higher cost of labor, even where raw materials have not advanced to any great extent.

Cow Chains Have New Discount.

In keeping with the higher prices in all steel goods cow chains have advanced in price and are now quoted at 37½ per cent. discount off list.

Tarred and Plain Building Paper Advance

Building Paper.—Jobbers during the week put into effect increased prices on tarred and plain building paper advances over recent quotations. Tarred No. 1 is now quoted at $1.05 per roll, while No. 2 in the same is selling at 58c. per roll. In the plain No. 1 is quoted at 95c. per roll and No. 2 in the same at 50c. Surprise plain is quoted at 52c per roll.

Certain Classes of Brooms Advance Further

Brooms. — Conditions in the broom market continue in a firm and advancing

market. One manufacturer's agent in the city received a list on October 20 and four days later this list was cancelled by the issuance of another which provided for higher prices on a majority of their lines. On a line that formerly sold for $6.60 per dozen the new price is $6.85, with a similar increase of 25c. on parlor carpet brooms and bamboo handled brooms. On special brooms such as used in warehouses and stables and by curlers, there is an advance of 10c. to 15c. per dozen. On the standard 4-string broom this particular manufacturer is quoting a price of $5.20 per dozen. Another manufacturer is quoting $5 as the cheapest line in a 4-string standard broom. The broom-corn situation continues to become more acute. The price in the United States has advanced from $200 per ton to $230 per ton. To lay this commodity down in Toronto the cost would represent in the neighborhood of $270 per ton.

Riceroot Scrub Brushes Advance 10 Per Cent.

Brushes.—There has been an advance of approximately 10 per cent. in one manufacturer's price of riceroot or French whisk scrub brushes. One of the lines that formerly sold for $11.50 is now quoted at $12.65. A year ago this scrub brush sold retail for 10c. At the present time, however, the retailer would need to get 15c. for the same brush to be in keeping with the market. The fibre for these brushes comes in part from Yucatan in Mexico. Trouble in that district has operated to send the price of the raw material up.

Iron and Steel Products Up 10c

Iron and Steel. — As intimated in HARDWARE AND METAL during the past two weeks a further advance in some lines of iron and steel products has been recorded during the week. The advance on most lines is in the neighborhood of 10c. per 100 pounds. The market is still on the up-grade and a further advance of 20c. per 100 pounds is anticipated in the near future. Common bar iron is now selling at $3.50 per 100 pounds. Refined iron is quoted at $3.75, an advance of 35c. Horeshoe iron is selling at 3.95 per 100, an advance of 20c. Norway iron holds at the recent quotation of $6. Mild steel is quoted at $3.50 and band steel at $3.75, advances in both instances of 10c. In sleigh shoe steel and domestic steel there is no change from recent quotations at $3.50. Reeled machinery steel, although nominally quoted at $5.50 is practically off the market. Tire steel has gone up 5c. to $3.70, and toe calk steel up 10c. to $4.35 per 100 pounds. Mining tool steel, Cammell Laird, sheet cast steel, Black Diamond tool steel, silver tool steel and spring steel remain unchanged at recent quotations.

Sash Weights and Wrenches Up.

An advance in sash weights has also been recorded during the week. They are now quoted at $2 per 100 lbs. for solid weights and $3.15 for sectional weights. Agricultural wrenches has been one of the lines that has registered an advance during the week. The new discount now quoted on these is 60 per cent.

Further Advances Expected.

Further advances are expected on galvanized sheets, wire nails and wire products, rivets, washers, spikes, bolts.

LONDON MARKETS

LONDON, ONT., NOV. 2.—Another list of price changes, almost all in an upward direction, has been announced, and further changes are expected. Business here is good and the high prices do not appear to restrict buying. Collections are good. Retailers are buying freely for Christmas trade. There is a scarcity of many lines which have proven good Xmas sellers in past years.

Building Paper Goes Skyward

Building Paper.—Papers of all kinds have been going upwards for some time past. Building paper is the latest to join in the procession and advances have gone into effect. New prices are as follows:—Dry Fibre, No. 1, 95c roll; Dry Fibre, No. 2, 50c roll; Tarred Fibre, No. 1, $1.05 roll; Tarred Fibre, No. 2, 58c roll; Surprise, 52c roll. On No. 2 dry and No. 2 tarred, both of which are big sellers, the advances amount to 7c per roll.

Snow Shovels Up 5 Per Cent.

Snow Shovels.—An advance of 5 per cent. has gone into effect on snow shovels and the new prices are as follows:—Japanned Arctic, $3 doz; Prince, socket, long handle, $5.04 doz.; King, socket, D handle, $7 doz.; Moose, socket, D handle, $9.80 doz.; Furnace scoops, $5.25 doz.

Food Choppers Up About 10 Per Cent.

Food Choppers.—The advance on food choppers is very mild compared with the advance in foodstuffs. It will cost about 10 per cent. more to buy food choppers from now on. New prices are as follows:—Genuine Gem, No. 20, $1.15 each; No. 22, $1.35 each; No. 24, $1.95 each. Universal, No. 1, $1.25 each; No. 2, $1.50 each; No. 3, $2 each.

Sash Weights and Cord Higher

Sash Weights.—Sash weights, both solid and sectional, have advanced about 10 per cent. Solid are now quoted at $1.80 per 100 lbs. and sectional at $2.40 per 100 lbs.

Sash cord has also moved upward and the new price follows:—No. 6, 42½c lb.; No. 7, 41½c lb.; Nos. 8, 9, 10, 12, 41c lb.

Candlewick and Seine Twine Go Higher

Candlewick.—A new price of 40c lb. has been issued on candlewick. Seine twine has also moved upwards and is now quoted as follows:—No. 18 and larger in 1 lbs., 48c lb.; No. 18 and larger in ¼ lbs., 49c lb.; No. 15 and smaller in 1 lbs., 49c lb.; No. 15 and smaller in ¼ lbs., 50c lb.

Cotton rope has advanced 3c lb. and 3-16 is now quoted at 35c lb.; ¼-in. and larger is quoted at 34c lb.

Perfection Wicks Up.

Oil Stove Wicks.—An advance of $3 per gross has gone into effect on Perfection oil stove wicks. The new price is $24 per gross.

Roofing Nails Go To Higher Level

Wire Nails, etc.—American large head roofing nails have moved upward and are now quoted at $6.95 in 100-lb. kegs, and $7.20 per 100 lbs. in 25-lb. boxes.

Wire nails remain very firm at $3.95 base. Present indications are that nails will go even higher. Cut nails are quoted at $3.70 base.

Pine Tar Advances

Pine Tar.—A new and higher price on pine tar in cans has been issued. The ½ pt. size is now quoted at 65c dozen, and pint size at $1 dozen.

Pig Rings Go Up

Pig Rings.—A new and higher price has been announced for pig rings and quotations are now as follows:—Nos. 1, 2 and 3, 55c per m.; assorted, 70c per m.

Mortar Stain Advances

Mortar Stain.—Despite the fact that there is very little building going on throughout the country, mortar stain has advanced and the new price follows:—Red (400 lb. bbls.), $1.15 per 100 lbs.; Black (300 lb. bbls.), $2.25 per 100 lbs.

Bread Mixers Advance

Bread Mixers.—An advance of 10 per cent. has gone into effect on Universal bread mixers and the price is now as follows:—4-loaf, $25.50 doz.; 8-loaf, $35 doz.

Fence Wire Unchanged

Galvanized fence wire remains unchanged locally and is quoted as follows:—Barb., $4.25 per 100 lbs.; No. 9 plain, $3.90 per 100 lbs.; No. 12 plain, $4.05 per 100 lbs.; No. 13 plain, $4.15 per 100 lbs.; No. 9 coil spring, $3.95 per 100 lbs.; No. 10, O. & A., $4.56; No. 11, $4.62; No. 12, $4.70; No. 14, hay baling in coils, $4.80.

Oil Remains Unchanged

Linseed Oil.—Linseed oil remains unchanged at last week's prices, as follows:

	Raw	Boiled
1 to 2 barrels	$1.12	$1.15
3 to 5 barrels	1.11	1.14
6 to 9 barrels	1.10	1.13

Turpentine is Firm

Turpentine.—Turpentine is firm locally following continued firmness in the primary markets. There is a fair demand at the following prices, single barrel lots, 72c per Imp. gal.; 2 to 4 barrel lots, 71c per Imp. gal.; 5 gal. lots, 79c per Imp. gal.

Glass is Firm

Glass.—Sheet glass is firm and is in good demand. Single diamond is quoted at 20 per cent. off; double diamond at 20 per cent. off; cut lights at 50-55 per cent off.

Lead Firm and Unchanged

White Lead.—White lead in oil remains firm and unchanged at $13.95 per 100 lbs. in ton lots, and $14.25 in less than tons.

Valves and Fittings Go Higher

Valves, Fittings, etc.—Prices of valves have advanced about 10 per cent. and the new discounts follow:—Genuine Jenkins, globe, angle, and check valves, 20 per cent.; gate valves, 30 per cent.; standard, globe, angle, and check valves, 50 per cent.

Jenkins pattern, globe, angle and check valves, 50 per cent.

Brass compression bibbs, 55-5 per cent.; rough stop cocks, 55 per cent.

New discounts have been issued on malleable fittings, and the new discounts are as follows:—Class A. and B., 20 per cent.; bushings, 55 per cent.; plugs, 50 per cent.; unions, 55 per cent.; nipples, 65 per cent. off.

Iron and Steel Firm

Iron and Steel.—The demand for steel is as insistent as ever for muntions purposes and the market is accordingly very firm. Bar iron is quoted locally at $3.25 base and bar steel at $3.35 base.

Bluestone Prices Issued

It was stated in this column a short time ago, that a supply of bluestone would be available for next spring's use. Prices have now been issued and reveal the following as best quotations available—12½c per lb.

Wire Nails, Etc., Advance 15c

Wire nails have advanced 15c as stated in last week's issue per keg and make quotations read as follows:

Ft. Wm. $4.00 per keg base; Wpg. $4.40 per keg base.

The new price on wire staples is also based on an advance of 15c per keg and present quotations are herewith noted: Ft. Wm. $4.05 per keg; Wpg. $4.45 per keg.

A further advance of $1.00 per box in the price of tin plates and terne brings these figures to an extremely high level. Best prices being made today are shown below:

Terne plates, I. C. 20 x 28, $13.00 per box.

Tin plates per box—I.C. 20 x 28, 15.50; I. C. 20 x 33, $18.00; IX, 20 x 28, $17.00.

Advance in Prices of Fence Wire

At different times it has seemed as though the high water mark had been reached in prices issued on various commodities but another boost has always followed and is seemingly, justified. It is the old rule of supply and demand and there is no doubt but that the war has created unusual markets and unprecedented demands on the supply of nearly every item in use to-day. This applies not only to items in the hardware trade but to boots and shoes, clothing and most essential perhaps, eatables.

As advances have occurred in the prices of annealed wire, hay bale ties and galvanized wire from time to time it has seemed that surely the latest price would be the highest and any further quotations issued would be on a lower scale. This is not borne out by increases shown in to-day's prices, however, and it is more than likely further advances will be recorded before a great period of time elapses. The latest advances are shown in prices given below:—

Annealed Wire	Per 100 lbs.
No. 9	$4 60
No. 10	4 65
No. 12	4 80
No. 14	4 95
No. 15	5 10
No. 16	5 25
Bale Ties—	F. William Winnipeg
14 x 9½'	$5 15 $5 25
Plain Galv'd. Wire	Per 100 lbs.
6-7-8 ga.	$5 15
10 ga.	5 25
11 ga.	5 40
12 ga.	5 00
14 ga.	5 90
15 ga.	6 40
16 ga.	6 90

(Continued on page 97.)

WINNIPEG MARKETS

WINNIPEG, Nov. 2.—Activity has been the keynote of the markets during the past week and very seldom, if ever, since the outbreak of war have so many lines been affected in one single week.

Two further advances in linseed oil have taken place, prices now being 10 cents per gallon higher than that noted in last week's report. We also note changes in the price of galvanized wire, annealed wire, hay bale ties, tin plates, galvanized and black steel sheets, fence staples, wire nails, putty and glass. In practically every case the change noted is an advance although galvanized sheets have some under revision with some reductions and some advances.

Window Glass Advanced in Price

The advance in window glass has been anticipated for some time and new prices run from 50c per 100ft. increase to over $1.00 per 100 ft. in the larger breaks. The latest quotations now being made are as follows:

	Single	Double
Up to 25 in.	$ 7 25	$11 00
26 to 40 in.	8 25	12 75
41 to 50 in.	10 75	14 25
51 to 60 in.	11 25	15 00
61 to 70 in.	12 25	16 00

Putty Also Higher.

The new prices which have been made in putty show considerable variation according to method of packing. This is not unusual, of course, but advances are in evidence throughout. Quotations are being made on the following basis to-day:

Putty—	Per 100 lbs.
Bladder, in bbls.	$4 10
Bladder, less than bbls.	4 60
Bulk, in bbls.	3 00
100-lb. drums	3 50
25-lb. drums	3 80
12½-lb. tins	4 00
1½-lb. tins, each	0 07

Black and Galvanized Sheet Prices Revised

For a long period now Winnipeg prices on black and galvanized sheets have remained stationary. This was not due to quietness of the market, however, as these two commodities have been the subject of great interest in the various manufacturing centres. However, favorable contracts enabled the jobbers to retain the lower prices for this considerable period and only now are changes going into effect. It will be seen in looking over new quotations on galvanized sheets that some gauges have been reduced while others advance. Present indications are however, that a general increase will take place before long

To-day's revised prices on galvanized sheets per 100 lbs. follow: Apollo or Premier—10¾, $7.00; 28, $6.60; 26, $6.20; 24, $6.00; 22, $6.00; 20, $5.80; 18, $5.80.

Black Sheets All Higher

The quotations being made on black sheets, however, show an advance all the way through approximating 40c per 100 lbs. This increase has been expected for some time past and the new prices below will be no surprise:

Black Iron Sheets per 100 lbs.—28 gauge, $5.15; 26 gauge, $5.00; 24 gauge, $4.95; 22 gauge, $4.95; 20 gauge, ...; 18 gauge, $4.85; 16 gauge, $5.45; 14 gauge, $5.40; 12 gauge, $5.55; 10 gauge, $5.45

EVENTS IN THE TRADE

Industrial Notes

Galt, Ont.—Plans are being prepared for a brick factory to cost about $50,000, for the Dodge Metal Hose Co. J. Evans, 30 Water street, is the architect.

Sarnia, Ont.—The Imperial Oil Company has secured a large tract of land at the south end of the city and will start construction of another refinery in the very near future.

Port Colborne, Ont.—The International Nickel Co. is getting prices on equipment for the refinery which will be built here. All buying will be done through the head office at 43 Exchange Place, New York.

Personal

Friends of L. F. Stephens, of the G. F. Stephens Co., Winnipeg, will be pleased to learn that he is recovering from a serious illness.

Hugh Girvan, 120 Cannon street, London, E.C., has been appointed agent in Great Britain by the Dominion Sheet Metal Co., Hamilton, Ont., for the sale of their galvanized corrugated and flat sheets.

J. Edward Dailey, formerly with the Algoma Steel Co., Sault Ste. Marie, Ont., has been appointed general superintendent of the open-hearth steel plant of the Youngstown Iron & Steel Co., Youngstown, Ohio.

While driving in his automobile on Saturday last, T. A. Anderson, president of the Merrick-Anderson Co., Winnipeg, became seriously ill. Mr. Anderson felt his illness coming on, and was able to stop the car before collapsing. He is a man about sixty years of age, and has always enjoyed good health.

O. N. Parent, representing the Canadian Yale & Towne, Ltd., St. Catharines, Ont., is calling on the trade in Ontario and Quebec. Mr. Parent visited HARDWARE AND METAL during his stay in Toronto, and reports that he finds conditions steadily improving. He is very optimistic of the future, and states that the company will continue to supply their Canadian customers with padlocks, night latches and builders' hardware manufactured at the Canadian plant, which was established at St. Catharines in 1912.

Death of Capt. F. R. Newman

The death of Captain Frank Ross Newman, in London, England, on Oct. 23, as a result of wounds received in action, will be received with regret by a wide circle of friends. Capt. Newman was wounded on September 28, on the Somme front and was progressing favorably until tetanus supervened, resulting in his death. Capt. Newman was born in Montreal in 1879, and was educated in that city, graduating from McGill University.

He started his business career with Caverhill, Learmont & Co., wholesale

THE LATE CAPTAIN FRANK ROSS NEWMAN.

hardware, Montreal, his father, Thomas H. Newman, now deceased, being a partner in the concern. In course of time he left this firm and went to Winnipeg to open a branch office for the Canadian Fairbanks Co., being appointed manager. He eventually resigned this position and joined the staff of the Laurentide Paper Co., at Grand Mere, Que. In 1911 he returned to the Canadian Fairbanks-Morse Co., as manager of the Toronto sales office, which position he held until the autumn of 1914, when he resigned upon being appointed to a captaincy in the 19th Battalion, C.E.F. Soon after coming to Toronto, in 1911, Captain Newman joined the Queen's Own Rifles as a Lieutenant, and was an officer in that regiment until his appointment as Captain and Quartermaster of the 19th Battalion, which went overseas in the spring of 1915.

The deceased was unmarried, but is survived by his mother, who lives in Montreal, and also by two brothers, Capt. Harry Newman, of the 5th Royal Highlanders, and John Newman, manager of the Montreal branch of the McClary Mfg. Co.

Incorporations

Toys, Ltd., capitalized at $45,000, head office, Montreal, to manufacture, buy and deal in toys, etc.

The Weir Machinery Co., of Vancouver, has been incorporated with a capital of $25,000.

The Pacific Steel Co., of Vancouver, B.C., has been incorporated with a capital of $100,000.

Canadian Metals & Equipment Co., of Vancouver, has been incorporated with a capital of $25,000.

A. R. Whiteall Can Co., capitalized at $500,000; head office, Montreal; to manufacture and deal in cans, etc.

Dominion Crucible Co., capitalized at $250,000; head office, Montreal; to manufacture and deal in crucibles, etc.

The Cannon Canadian Company, Ltd., capitalized at $100,000; head office, Toronto; to manufacture glues, gelatines, etc.

Reliance Motor & Tool Co., capitalized at $60,000; head office, Toronto; to manufacture and deal in tools, machinery, etc.

Canada Gelatine Co., capitalized at $250,000; head office, Brantford, Ont.; to manufacture and deal in glues, gelatine, fertilizers, etc.

Van der Linde Rubber Co., Ltd., capitalized at $350,000; head office, Toronto; to manufacture and deal in rubber goods of all kinds.

Varnish Specialties, of Canada, Ltd., capitalized at $20,000; head office, Montreal; to carry on the business of wholesale and retail merchants and manufacturers of varnishes, oils, paints, etc.

Fire Losses

Waterford, Ont.—Foster Boslaugh's hardware store has been destroyed by fire.

Waterford, Ont.—Fire completely destroyed the I. E. York block. The York store, a large departmental, carried a considerable stock of hardware, oils, etc.

New Firm

Hafford, Sask.—J. H. Millard is opening a hardware business in the town of Hafford, on the Battleford line. The store will be in charge of Herbert D. Davidson, of Clift Bros. store.

Capt. H. C. Baker Killed

According to news received by his wife, Capt. H. C. Baker, of Calgary, who was reported wounded and missing on Oct. 14, was killed in action. He was formerly manager of the Canadian Oil Company at Calgary, and enlisted with the 82nd Battalion.

Business Changes

Minto, Man.—John Minto is discontinuing his hardware business.

Chauvin, Alta.—S. G. Lewis has sold out to G. W. Allan & Co., hardware and harness.

Regina, Sask.—Peart Bros. have discontinued their wholesale branch but are continuing the retail branch of their business.

To Get Commission

Kirk Loucks, eldest son of E. B. Loucks, formerly of Bissett & Loucks, but now manager of Merchants' Consolidated, Ltd., Winnipeg, has been recommended for a commission in the 200th Battalion, and has been detached from the 31st. He was thirteen months at the front and was seriously wounded, but is now home on leave.

G. T. P. Nearing Prince Rupert

Prince Albert, Sask.—It is expected that the new Grand Trunk station and freight sheds will be completed before the end of the year, and that steel will be laid into the city within three weeks. Lacroix Bros. & Co., Ltd., have received sub contracts on the buildings, for hardware, glass, electric lighting, roofing, tinsmithing, plumbing, and heating.

Brandram-Henderson Sales Convention

Representatives Gather at Montreal — President Refers to Growth of Export Trade—A Window Dressing Contest for Salesmen.

Brandram-Henderson, on October 26, 27 and 28, held their Eighth Annual Convention of Managers and Salesmen at Montreal. The meetings dealing with technical subjects were held in the Monreal plant, the sales and advertising being held in the convention rooms of the Place Viger Hotel. Representatives from coast to coast attended the Convention, which was the most successful of all such meetings of the Company.

The general meetings were presided over by Geo. Henderson, President and General Manager, who, in his address of welcome, announced the marvellous growth of the Company's sales and interests, advising of large export business with South America, Russia, France, Cuba and the West Indies.

The Technical sessions presided over by Geo. M. Edwards and R. H. Monk gave the delegates valuable information regarding the manufacture of chemical dry colors and the corroding of white lead.

The sales and advertising programmes for 1917 were dealt with fully and the complete advertising campaign was explained at length by W. S. McLennan. Many new and valuable sales helps for B-H "English" paint agents, to be used during the coming season, were announced to the salesmen, in order that they will be able to fully place the benefit of these many features before their customers.

The entertainment was arranged by C. H. G. Short and included automobile trips through the residential and business sections of the city, a theatre party at the Orpheum during which a moving picture of the convention members was shown together with a film of the Brandram-Henderson plant demonstrating the manufacture of their various products.

One of the features of the session was a prize window dressing competition, in which teams were entered by the Montreal, Halifax, Toronto and Winnipeg divisions. Windows were secured in four of the leading B-H English paint agents' stores. The teams were given three hours in which to dress the windows and the result of their efforts was judged by one of the leading hardware merchants of Montreal, in conjunction with all the members of the convention. The prizes were won by the Ontario and Maritime divisions, though honorable mention was given to both the other divisions.

The convention concluded with an elaborate banquet at which a number of the Directors were also present.

AUSTRALIAN COMMISSION WILL STUDY METHODS OF CANADIAN MANUFACTURERS

ACCORDING to a report received at Ottawa by the Trade and Commerce Department by Canadian Trade Commissioner Ross at Melbourne, the Commonwealth Government has appointed a commission to visit Canada and the United States to investigate and report upon methods of manufacture and production, and the conditions of employment on this continent. The commission will consist of representative manufacturers of Australia, together with six representatives of the workers. It will spend about four months in Canada and the United States, and the industries to be specially investigated are iron engineering and allied trades, timber, building materials, leather, textiles, paper and trades in the preparation of foodstuffs.

In connection with the proposed commission, it is interesting to note that Canada's trade with Australia during the past year has shown a very large increase. Canadian imports from Australia during the twelve months ending June, 1916, total $3,251,558, an increase of nearly 500 per cent. as compared with the preceding 12 months. Canadian exports to Australia during that period totalled $8,542,065, an increase of almost three millions.

HARDWARE LETTER BOX

Palace Gas Heater

R. A. Wells, Dresden, Ont.—Please give name of manufacturer of the Palace Gas Heater.

Can any of our readers supply the information?—Ed.

Le Page's Door Checks

Fraser Hardware Co., Galt, Ont.—Please give name of manufacturer of the Le Page door check.

Wm. Keating, MacDonnell avenue, Toronto, Ont.—Editor.

Lamp Reflectors

The Willard Hardware Co., Chatham, Ont.—Please advise where we can get reflectors from 12 in. to 24 in. diameter.

The Hiram L. Piper Co., Ltd., Montreal, Que.; The N. L. Piper Railway & Supply Co., Toronto; Crouse-Hinds Co. of Canada, Ltd., Toronto.—Ed.

Gould Stove Parts

Mulhall Hardware, Ltd., Ottawa.—Please advise where we could secure parts for stove formerly made by Gould Mfg. Co.

The Gould patterns, etc., were taken over by the Tudhope-Anderson Co., Ltd. Orillia, Ont. The latter firm can supply parts.—Ed.

PRACTICAL SHEET-METAL WORK

THREE PIECE ELBOW WITH GUSSET OR GORE PIECE.

BY THOMAS STANFIELD

IN the accompanying plate are shown two articles which are good practice in pattern developing. Figs. 1, 2, 3 and 4 are in connection with a funnel and spout. Fig. 1 shows the half plan and elevation.

First draw a vertical line xx, using same as centre of both plan and elevation, the various slant lines being determined as shown at A, B, D, E, F, G. Next draw the half plan of the top of funnel, divide into 10 equal parts, as shown, extend lines AD and EB so as to procure point C.

Next draw half plan of hole shown at DE, and divide this into 6 equal parts.

Now turn to Fig. 2. With C as centre, open compass the distance required and shown at CB, in Fig. 1, and draw a circle with CB, Fig. 2, as radius. Divide this into equal parts, the measurements being those in the half plan, Fig. 1, 1 to 11, and repeat. Now make another smaller circle, using C as centre and E as radius; this completes the pattern Fig. 2 for the body of the funnel.

The spout is developed in very much the same manner, though it will be noted that the radius is much longer. For the sake of saving space a half plan and elevation is drawn from which to develop a full pattern, as shown in Fig. 3. One great trouble with the common funnel is the overflowing or splashing out of liquid as it is being emptied into a vessel. This is due to the air being confined in the bottle or vessel. By placing a small pipe into the interior of the funnel, as shown in Fig. 4, this overflowing can be overcome.

Sheet Metal Scoop

Figs. 1a and 2a shows a very handy flour or sugar scoop, and while this article is very common and often factory-made, the practice in developing it will be interesting, and many a time such an article can be made when wanted, in much less time than sending to a factory. Then, again, a boy apprentice should be encouraged to make such line of articles.

First draw the elevation, Fig. 1a, then develop the half plan as shown, dividing same into 6 equal parts, 1, 2, 3, 4, 5, 6, 7, with 4 as centre. From points where plan is cut draw a number of dotted lines until the side of the elevation is intersected, and draw a stretchout line in line with back of scoop, as shown at AB. Then transfer the measurements from half plan to this stretchout line, as shown in 1, 2, 3, etc., and from points where the dotted horizontal lines are drawn erect a number of vertical lines, cutting the lines drawn from stretchout line AB. Next draw a curved solid line from the various points where the dotted lines cross, in a similar manner as is followed out when developing an elbow pattern and the pattern for scoop is complete except that a circular piece of material is required for the back. This is made a little larger in diameter than the plan, so as to allow for seaming and locking. Allowance must also be made at either point A or B for seaming body of scoop.

(Continued in next issue.)

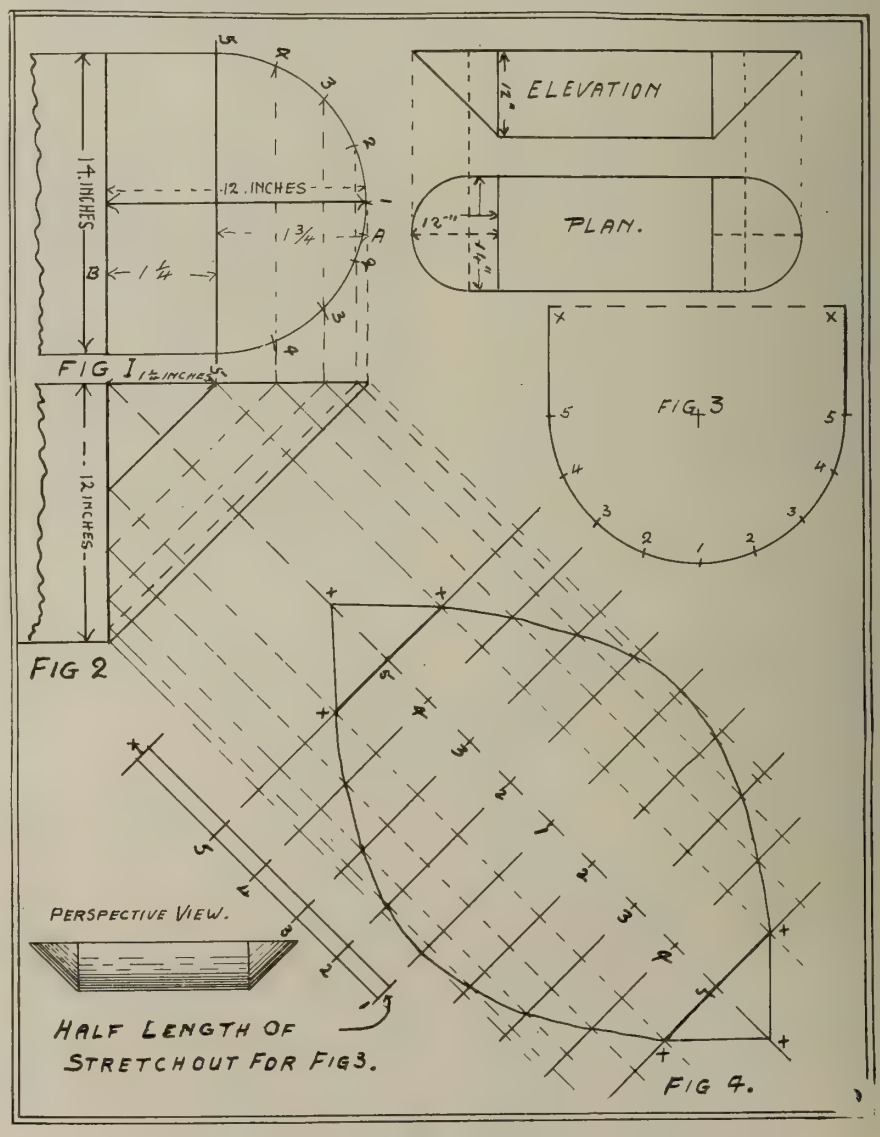

FIG. 32

WEEKLY HARDWARE MARKETS

(Continued from page 93.)

	Ft. William Per 100 lbs.	Winnipeg
9 ga.	$4 25	$4 65
12 ga.	4 50	4 90

Linseed Oil Higher

Further activity has been shown in the linseed oil market and prices to-day are 10c per gal. higher than those noted in last week's report. Best prices to-day are for Raw $1.31 per gal.; boiled, $1.34 per gal.

Rope Prices Revised

Another revision is to be noted in the price on rope, the two lines affected being sisal and lath yarn, on which an advance of ½c per lb. is recorded. The new base price for each of these items is now 17c per lb.

Tinners Wire Up

Bright tinners wire and stove pipe wire also show increased prices as noted in schedule below:

Bright Tinners Wire per 100 lbs.—0.9, $4.80; 10, $4.86; 11, $4.92; 12, $5.00; 13, $5.10; 14, $5.20; 15, $5.35; 16, $5.50; Stove pipe wire 19 gauge, $7.50 per 100 lbs.

TORONTO PAINT MARKETS

(Continued from page 102.)

for such phenomenal advances as have come to cotton, there is evident reason to believe that the improved demand that is showing itself generally, and that promises to make the fall and winter consumption much above the ordinary, will have its due effect on quotations and induce a rise in values to the long-expected 50c basis or better. One feature of the situation that promises to assist in bringing about this upward movement is the heavy foreign shipments. In addition to the 8,300 barrels cleared on the Brunhilda this week for London, and the 7,000 on the Irene, equally as great shipments for United Kingdom ports are regarded as probable during the next thirty days. This is an extraordinary movement under existing conditions, and reflects the heavy deliveries on the London market. The American position of the article will be strengthened by such heavy drafts on the visible supplies, and as current home demand is in excess of the receipts, and will become more noticeably so as the receipts diminish with the season on its last legs, the stocks at the main primary markets are expected to show a heavy falling off from now on." On Wednesday, turpentine was quoted at Savannah at 45½c to 46c, with the market reported firm. Quotations locally remain as follows:

	Per Imp. gal.
1-barrel lots	67c-72c
2 to 5 barrels	65½c-71c
6 to 9 barrels	64c
5-gallon	72c-79c

Gum Shellac Showing Still Greater Firmness

SHELLAC.—There is a continued firmness in the price of shellac, due primarily to the increased firmness in the gum shellac market. It is expected this firmness in the primary market will affect the price of orange and white shellac in spirits in the near future. Scarcity of vessels and heavy freight and insurance rates from India have also been a factor tending to greater firmness in the shellac market.

Intimations Received of Probable Glass Advances

GLASS.—Local dealers have received intimations from the American manufacturers that glass will in all probability be advanced in the near future. With the opening of the fires on October 25 in American glass mills, the manufacturers were compelled to enter into a contract with the glass blowers for an advance of 20 per cent. in wages over that paid last year. As much of the cost of glass is represented in a labor cost, this advance is taken as a pretty sure indication that prices of glass will have to be higher. The manufacturers in the United States have already reduced their cash discounts from 2 per cent. to 1 per cent., which means an advance in price to the jobbers. There is a prospect of a big demand in the United States because of the fact that jobbers' stocks are low. In the United States there has been a great scarcity of the larger sizes of window glass used by sash and door manufacturers. With the starting of the glass mills again the premium of 10 per cent. that had been paid on these sizes has been taken off. But this does not mean that there is not a likelihood of a general advance on window glass when the mills announce their new prices.

Hard to Get Supplies of Highest Grade Gasoline

GASOLINE.—There is a scarcity of the higher grades of gasoline, such as used by rubber manufacturers, and price is consequently very firm in this article. One large dealer has found it necessary to delay delivery owing to the inability to get this grade through promptly. Motor grades of gasoline also hold firm at 26½c. Advances in the crude oil have been expected in the mid-continent field, but at the time of writing have not developed. There has been no change in the refined product in the United States. Big efforts are being put forth in the Eastern United States and in Kansas to increase the production in oil territory.

PARCELS FOR PRISONERS IN GERMANY

The Post Office Department has been notified by the British Post Office that many parcels sent from Canada to prisoners of war in Germany are being received in London in a damaged condition, so that frequently they have to be repacked before they can be forwarded to Holland for transmission to Germany The British Post Office adds that in most cases the damage appears to be due to the fact that the parcels were inadequately packed by the senders.

The public are warned, therefore, that parcels for prisoners of war, unless they are very strongly packed, will probably arrive in such a condition as to be of little or no use to the recipients.

Ordinary thin cardboard boxes, such as shoe boxes, and thin wooden boxes should not be used; nor does a single sheet of ordinary brown paper afford sufficient protection. Even where proper materials are used, it is important that the contents should be tightly packed so as not to shake about during transit. The following forms of packing are recommended:—

(1) Strong double cardboard or strawboard boxes. Those made of corrugated cardboard and having lids which completely enclose the sides of the box are the most suitable.

(2) Tin boxes such as are used for packing biscuits.

(3) Strong wooden boxes.

(4) Several folds of stout packing paper.

The British authorities advise that parcels for prisoners of war in Germany must not be wrapped in linen, calico, canvas or any other textile material.

Parcels posted in Canada for prisoners of war in Germany which have not been adequately packed by the senders will not be forwarded but will be returned to the senders, as the British Post Office has notified the Department that parcels which are inadequately packed must be returned to the senders.

CATALOGUES AND BOOKLETS

Sales Building Advertisements

Hercules Powder Co., Wilmington, Del., has issued an attractive book of prepared advertisements for retailers' uses. Eighteen advertisements, in electrotype form have been prepared and will be furnished free to retailers. Instructions on how to secure the advertisements are given in the book, copies of which will be supplied on request.

NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

ICY-HOT LUNCH KIT

A new lunch kit has just been put on the market by the Icy-Hot Bottle Co., of Cincinnati. It is meant for school

children, shop or office employees and handy general use.

The kit consists of a pint Icy-Hot Vacuum Bottle and a metal carrying case. The container is light, durable and coated with black waterproof enamel.

The concave lid is held down by two clamps, this arrangement preventing the case from being twisted out of shape or being dented. The carrying strap is on the top. Inside, the bottle is held in the concave lid, strapped to it. The food is placed below the bottle.

The makers claim that Icy-Hot Bottles keep hot drinks hot for 24 hours and cold drinks cold for 3 days. The cap, used as a drinking cup, is nickel-plated.

The Icy-Hot Bottle Co., 529 W. Second St., Cincinnati, Ohio, will be glad to send particulars and prices on application.

SIMONDS DISPLAY STAND

Simonds Canada Saw Co., Montreal, Que., announces a new display stand, Form H 2060, 12 inches long, 4½ inches to top of letters. The stand is an exceptionally attractive one and holds a hand saw.

The stand can be used on a dealer's counter or in a display window.

Another feature is that it will hold any style or size hand saw. It will also hold a pruning saw. Possibly a cross-cut saw could be placed between two of them. The words apply equally well to any style of saw. One unique feature about this display stand is that when it is on the counter with the front turned toward the customer, on the back of it in plain view of the clerk, is a printed list of arguments which the clerk can use in making the sale of the saw. He can glance at the sign and be reminded of some point to bring out in his talk to the carpenter, at just the time when such a point will help to clinch the sale. The stand will be supplied free to dealers.

J. B. SLICING MACHINE

The Jacobs Bros'. Co., Inc., 78 Warren street, New York, announce that

they have made a very essential improvement on their slicing machines. The improvement consists of a special device that is equipped with an adjusting board. The machine can be used for slicing green dried beef, hard dried beef, Bologna, liver, salt pork, head cheese, pressed corn beef, boneless ham, Saratoga chips, and fresh bread. The knife is made of high grade steel and hardened. The manufacturers state that their slicing machines can be folded when not in use, so that it takes up no room whatever.

THE HYGIA CAN

Hygia Can Co., Inc., Duane and Elm street, New York, N.Y., offers to the trade the Hygia can, "The Waste Receiver de Luxe." The can is an all-steel product, finished throughout in pure white enamel, thus making it pleasing to the eye. All parts are securely spot-welded. No rivets are used. The cover raises automatically by pressing a foot pedal, leaving both hands free. Upon releasing pedal, the cover falls in place and as it does it sprinkles a powerful, yet odorless disinfectant over contents of the can, thus arresting decomposition, destroying objectionable odors, and keeping contents sweet and clean.

An ingenious device permits of locking cover shut by simply throwing handle forward. This, it is said, defeats efforts (by dogs or cats) to disturb contents and renders access by flies impossible. The can is said to be particularly adaptable for use in the kitchen, nursery, bath-room, doctor's office, sick room, hospitals, etc. For outside use, the makers state it is dog-proof, cat and fly-proof, because the cover automatically locks snug and tight.

WHAT OTHER PAPERS SAY

PRIZES FOR READING ADS.

(From Merchants Record and Show Window.)

All merchants appreciate the importance of having sales people read and study the store's advertisements, yet it is not always an easy matter to get clerks to do this. A scheme that is employed in a good many stores is to give a small prize to the first person detecting and reporting any mistake in an advertisement. Best & Co., of New York, do this in the manner described in the following announcement:

"There will be given to the member of our organization first reporting in writing an error in accuracy, false statement or mistake in price, material or item of merchandise in any of our advertisements, the sum of one dollar. This is open to every employee of Best & Co., and all are urged to participate. Such prizes will cover all our advertising—newspaper, circular, magazine or any other form of printed advertisement.

"Also comments, suggestions, remarks and criticisms made by customers of Best & Co. constitute in some cases valuable information. For such comments, remarks, criticism, etc., of a constructive nature, reported in writing, the firm will pay according to the value of the suggestion or comment, in exactly the same way as prizes are given on other store matters coming through the Suggestion Box. Such suggestions should be made the same way and should be placed in the suggestion box at the employees' entrance.

"Although our salespeople are the ones most likely to hear such suggestions, from their continual contact with customers, all our store members are urged to compete for these prizes, for the advertising being a matter of such primary importance, our people may not only win the prizes, according to the value of the suggestion, but they may contribute materially to the success of Best & Co. by helpful comment or suggestion of new ideas."

LOOKING TEN YEARS AHEAD

From *Highway Magazine.*

Another ten years will see national road systems covering every section of the country —the greatest practical step in the direction of preparedness that could be made," comments Dr. H. M. Rowe, the president of the American Automobile Association.

"In a decade we will begin to have separate roads for freight traffic and passenger traffic," predicts Dr. Rowe, "and the horse and mule will have practically disappeared. No other country on the face of the earth can make such good and profitable use of good roads as the United States of America. We will eventually excel in that as we do in many other things.

"But equal justice and fair treatment, for the users of motor vehicles must continue to be sought for some time to come. Everything the motorists ask for, everything the American Automobile Association and the clubs affiliated with it have worked for, has been based on these principles. We have worked for good roads for the reason that they are of equal economic benefit in the final analysis to all, and it is only just and right that the people of our country should have the advantages to which they are entitled. We have worked for unrestricted intercourse between the states through the use of motor cars, because that is a constitutional right that has been denied us. We have asked for equal taxation. That is another constitutional right that has been set aside, partly because we submitted to it willingly, I admit, but it is an injustice and constitutes unfair treatment just the same.

"In addition, the owners of motor cars are being subjected to all sorts of petty annoyances, special taxes, licenses, and rules and regulations regarding traffic, use of light, and many restrictions seldom alike in two places, and which subject decent men and women to arrest and conviction, often for the most trivial reasons. There are many who look upon an arrest of any kind as a disgrace, and when one is innocent of any intentional wrong, his arrest becomes a shameful disgrace, not only to him but upon the community which permits it."

EXPORTERS CANNOT CO-OPERATE

(From Hardware Age.)

Brief announcement was made last week of the failure of the United States Senate of the effort to pass the Webb bill authorizing the formation of combinations in the export trade. This ignominious ending of a praiseworthy movement received far much less attention in the daily press than it deserved. The bill had been fathered by the Federal Industrial Commission and was so free from what might be considered objectionable features that it should have encountered no difficulty in its passage through the Senate and its enactment into law. Unfortunately, however, the Senate embraces among its members some who feel that they must antagonize anything favored by manufacturing interests and see a menace to the public welfare in any proposition that even hints at co-operation. If the Webb bill had gone through, with this well-known feeling among certain political leaders, that would have been accepted as an indication that the animosity against manufacturers was at last softening and that a better era had dawned. But it seems that this was too much to expect. In view of what other countries are doing to promote the interests of those who seek foreign trade, it is to be hoped that our government may in time come under the control of men of broader vision.

AUTOMOBILE OCCESSORIES SELL BEST THROUGH RETAIL HARDWARE STORES

With the great increase in the number of automobiles which are being used for business as well as for pleasure there has naturally also come a heavy increase in the demand for repair parts, new appliances and the thousands of articles which are classed as automobile accessories.

In the early stages of the automobile the owner secured his repair parts and supplies from the manufacturers. Automobile parts had not been standardized, and there was no other way by which he could obtain what he wanted and be certain that when he'd get it, the particular article would fit his machine.

When standardization had taken place and as the automobile became a more common form of business and pleasure vehicle, it was deemed advisable to provide a quicker way for the owner of an automobile to secure such new parts or accessories than to send to the manufacturer for them, and automobile accessories became a "regular" class of merchandise, bought from the manufacturer by wholesalers and retailers and then distributed through these channels to the consumer.

The progressive retail hardware dealer at once saw the opportunity presented to him in this new line of merchandise. He appreciated the fact that here was a wide field—absolutely virgin—by the cultivation of which he could add very considerably to his sales and profits, and so the first automobile accessory departments were established in retail hardware stores. Being conducted along the same progressive policy as characterized the operation of the other departments of these stores they not only brought new customers into the stores who also bought other lines of hardware, but the automobile accessory departments proved themselves to be highly efficient in the matter of their own sales and profits.

As time has passed, it has been demonstrated very thoroughly that the retail hardware store is the preferred means of distribution which the automobilist seeks when in need of any new appliances, or repair part, or accessory of any kind for his machine. He has found that by doing business with a regular retail dealer he not only receives quicker service in cases where his order cannot be filled from the retail hardware dealer's stock, but that he can buy his automobile accessories at more reasonable prices in the retail hardware store than in other places.

THE GERMAN FRYING PAN

According to the English *Ironmonger,* the *Frankfurter Zeitung* publishes a half-page advertisement calling attention to the National War Frying-pan. It relates how, last year, there was scarcely a German Hausfrau who did not sacrifice her copper kitchen utensils, "to which so many family traditions were attached," to the Fatherland. The kitchens were empty, bereft of their ornaments. As a token of gratitude to the housewives of Germany, it has been decided to commemorate their sacrifice by a souvenir in the shape of a frying-pan, bearing the legend: "The German Hausfrau's sacrifice; she gave copper in return for iron in the World War, 1916." The War Frying-pan is solidly constructed of the best material (the particular metal used is not stated), and, what is more, good cooking results are said to be otbained with a minimum of fat. The pan is not presented as a gift, as it is assumed that the German housewife, although ever ready to help the Fatherland, is unwilling to accept any acknowledgment without at the same time furthering a noble cause. Therefore she will have to pay three and nine-pence for the pan. The entire profits secured from the sale of the pan will be devoted to funds for naval hospitals, sailors' homes, and "German prisoners languishing abroad." An honorary committee has been formed, containing the names of well-known personages, and the patrons are the Princess Friedrich Karl of Hessen and the Princess Margaret of Prussia. The committee, which consists of ladies belonging to the aristocracy, the high official and industrial worlds, and Jewish finance, has opened a shop in Frankfurt, where it is doing a roaring and sizzling direct trade. The retail ironmonger does not come into the scheme at all.

TRADE INQUIRIES

1285. **Calcium of carbide.**—A Cape Town firm makes inquiry regarding the possibility of agency of Canadian-made calcium of carbide.

1286. **Hardware.**—A Johannesburg firm of wholesalers requests catalogues and price-lists on household and building hardware.

1287. **Woodenware.**—A Johannesburg firm of wholesalers requests catalogues and price-lists of woodenware.

1289. **Guns and ammunition.**—A Johannesburg firm would like to hear from ammunition and rifle manufacturers; catalogues and price-lists requested in first correspondence.

1290. **Perambulators.**—A Johannesburg firm asks for catalogues and price-lists from Canadian manufacturers of baby carriages and go-carts.

WEEKLY PAINT DEPARTMENT

Show the Customer How

Instructions Should Go With Every Can of Paint Sold—Ignorant Use of Paint Breeds Discontent and Means Loss of Business to the Dealer

PAINT is a commodity that must bring repeats. Every householder has to use paint more or less continuously. If nothing is needed for outside application, there is always a floor to be painted or some walls to be decorated, or a little tinkering to be done with furniture. And so it is very important, from the standpoint of the dealer, that the paint he sells should give satisfaction. Otherwise his customers will not come back for more; they will seek out some other store for a new variety.

And this brings forward very forcibly the fact that in order to give satisfaction, the hardwareman must do more than carry a reliable brand of paint. That, of course, is the main essential. The paint that he sells must be **right.** But it is astonishing what poor results can be obtained from the best of paint when the user does not know how to use it properly.

Recently a prominent paint man gave out an interview on the proper use of prepared paint and, among other things, he said:—

"To properly stir any paint combination requires 10 to 15 minutes of constant agitation. This is best secured by using a broad, strong paddle which has been well perforated with half-inch holes. A constant up and down motion, after the manner of churning, is far more efficient than stirring around and around, as most amateurs try to stir paint. The up and down motion thoroughly combines the pigment with the oil, while the around and around method leaves the oil on top and the greater part of the pigment at the bottom of the container.

"Did you ever see a woman stir a can of paint? She usually takes a small twig or splinter, slightly larger than a broom-straw and stirs the paint around and around for about thirty seconds. Then she takes a so-called brush, purchased at the ten-cent store, and begins to apply the paint. After a few minutes she complains that the paint is too thin and that it is not the proper shade. But after the container is about half empty she begins to complain that the paint is too thick. But she easily remedies this by adding a little carbon-oil, sewing-machine oil, raspberry-vinegar, or anything in the liquid line she has in the house. The next day when she pokes the job with the end of her finger and discovers that the paint has not dried, she flies into a fit of denunciation and blames the paint."

This is but one way in many that good paint can be abused. It is surprising in how many ways the average man, or woman, can go wrong in applying a coat of paint—in selecting a brush and then in handling it, in attempting to thin the paint, in leaving it around in open cans, and so on ad infinitum. Ever see a little job of painting being done with a brush so hard that it was like working with a piece of knotted blackthorn—putting on the paint in scratchy blotches? Of course you have. It is done every day. When the head of the house is at last goaded into getting at that strip of floor in the spare bedroom, he generally has to dig out a brush from behind the furnace. It is, of course, hardened up with last year's paint and a little glue, perhaps; so he soaks it as well as he can and then goes at the job. Get good results? Of course he doesn't.

It Depends on the Dealer

And so it devolves on the merchant, on the salesman, to see that every customer who carries away a can of paint under his arm carries also a modicum of common sense and some sound instruction in his head. It is the duty of the salesman to see that the customer knows how to get the good out of the can. Otherwise, the purchaser will come back with a wrathful tale of woe, or, worse still, will quietly start dealing at some other store.

Sell Him a Brush

So much from the standpoint of future business. It is also in the interests of **present business** to thoroughly coach the customer. Ask him about his supply of brushes. The chances are that he hasn't a suitable one, but he won't think of that himself. Give him a brush reminder—and then sell him. Sell him everything that he will need in doing a good job of his painting. It's too bad that he can't be sold a pair of overalls—he'll need 'em.

About Painting on the Farm

Agricultural Paper Urges Farmers to Use More Paint and Gives Some Hints as to How to Select and Apply Paint—An Idea for the Dealer.

A VERY interesting article urging farmers to paint their buildings better and more often is found in a recent number of *The Wisconsin Agriculturist.* It is addressed to the farm, but contains much material that will be interesting to hardware dealers who have the selling of paint to the farmer.

Dealers generally value to a high degree the farmer's trade and especially since farming has become so profitable There was a time when dealers of all classes shunned the farmers' trade as a general proposition. The general average of farmers represented a class of small buying power, but happily all these conditions have changed. To-day dealers are seeking the farmers' trade as the most profitable, and farm journals in many instances have published good articles concerning this branch of the consumers' trade. Believing many dealers would be interested in an article on paint to the great American farmer, the following is reprinted:—

"Well painted buildings are a sign of prosperity, thrift and good management.

"When we consider a farmer's application for a loan on his property, we always take into account the appearance

A LIFE-LINE — that is what the Pratt & Lambert Line can be to you. It will save your business from the dangers of returned goods, dissatisfied customers and lost profits — and it will stand by you for life, turning in a consistent profit each season. More than this— it will tie up the *desirable trade* to *your* store, because the Pratt & Lambert Line has become familiar through national advertising, to the very buyers who want the *best*, not only in varnishes, but in everything else.

IF you were juststarting in business today, you would try to pick from the great mass of manufacturers in your line, just those firms of whose goods you were absolutely certain, and of whose business methods you had no doubts. *You owe it to yourself and to the business you have already built up, to be as careful now in selecting the concerns whose lines you carry.* For sixty-seven years we have been making and selling varnishes. There are many dealers on our books with whom we have spent a life-time of business co-operation. There is great significance in those two facts.

Pratt & Lambert, Inc.

of his buildings. If they are well painted and orderly, we will lend from 25 to 50 per cent. more than we would on property that looks shabby and untidy. Careless, slovenly people are generally slow to pay,'' remarked a banker recently.

The Economy of Paint

Besides giving property more apparent value, painting keeps property up to par. Buildings, fences, sheds and machinery protected by good paint are insured against weather wear—the wear that junks more farm machinery, takes down more fences, and makes more repair jobs on the buildings than anything else.

On farm machinery alone we farmers spend every year over $150,000,000. It has been estimated that at least 10 per cent., $15,000,000, goes for replacing worn-out machinery and parts. This is a heavy tax, much heavier than it should be, for rust can be prevented by paint, and machinery is oftener rusted out than worn out by use. The polished surfaces should be thoroughly smeared with a paste made of white lead and tallow, and the metal framework and parts carefully painted.

Buildings that are principally wood will last for a long time without painting, but they will last in good condition for centuries if they are kept well painted. While some of us can stand ugliness that costs nothing, we do not want to put up with ugliness that is more expensive than beauty. An unpainted or badly painted building costs more for repairs and tinkering in the course of a few years than it would cost to keep it well painted. Its actual value shrinks faster than its rotting shingles and blackened, warping clapboards.

Then, what do our neighbors and visitors think? We Americans live in awe of our neighbors. Our social standing is affected by our personal appearance and what our homes look like. A visitor also gets his impressions largely from appearances. Knowing that Wisconsin has won wealth and fame from her matchless success in the great dairy industry, that in variety and volume she is the premier State in the nation in the production of cheese and other dairy delicacies, he naturally expects to see evidence of this prosperity—and he does.

Comfortably furnished, well lighted homes, telephones, automobiles, and all that goes to make for an enjoyable home life, he finds on every hand. With justifiable pride we call attention to the many things that Wisconsin is proud of—her splendid schools and roads, the high average of patriotic, intelligent citizenship, her rapid progress and development as a manufacturing State, the high average of thrift and good management indicated by the immense volume of her bank deposits.

Colors, Tints and Tones

What colors to use in painting buildings is largely a matter of personal taste and preference, though it is well to bear in mind that a radical departure from the accepted colors may prove disappointing and freakish. The white house with green blinds is the most characteristic American color scheme. It is the standard for houses built in the colonial style and for those set among trees. Bungalows and cottage houses admit of successful treatment in many tones and combinations.

In choosing colors for interior decoration great care should be taken to secure colors and tints that harmonize with the colors in rooms and halls that are structurally connected. The selection of the proper colors follows definite laws and makes all the difference between an artistic, pleasing interior and a crude gaudy effect. It costs no more for the one than for the other. Manufacturers of paint issue booklets containing explicit directions for securing pleasing color harmonies. Painters and paint dealers generally have a file of such literature, and a few minutes spent in looking it over will well repay you for the little time it takes.

WEEKLY PAINT MARKETS

(Continued from page 104.)

Linseed Oil Holds Steady; Seed Easier

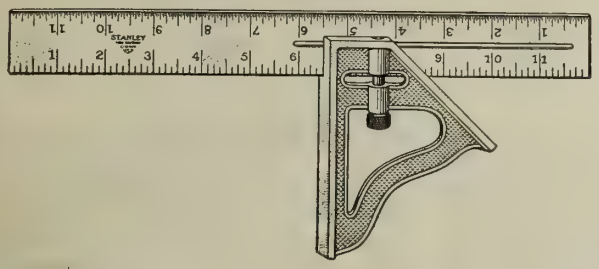
LINSEED OIL.—There was a slightly easier tone in linseed oil in certain quarters over the prices quoted last week of 2½c per gallon. That is, the higher quotations have shaded down nearer by that much to the lower level. The range for raw oil is consequently within narrow limits, $1.08 to $1.12½. There has been a decline of 5¼c in the price of November seed at Winnipeg over the price prevailing on Wednesday of last week. Flaxseed on Wednesday of this week closed at $2.48¾ as compared with the close of $2.54 for November last week. There is a feeling, however, that there will in all probability be still higher prices for the seed. There was a slump in wheat during the first part of the week, and flaxseed presumably followed in sympathy. There has been a fairly good demand for linseed oil. The demand for oil cake continues good, with quotations the same as last week, $44 to $45 per ton. The market in linseed oil at the present time might still be characterized as firm. Quotations are as follows:

	Raw.	Boiled.
1 to 2 bbls....	$1.08-1.12½	$1.11-1.15

3 to 5 barrels, 1c under 1-2 barrel lots, for both raw and boiled; 6 to 9 barrels, 2c under 1-2 barrel lots.

White Lead Remains at High Figure

WHITE LEAD.—There is a fair demand for white lead in oil. The market continues firm, due to continued strength in the pig lead market. The quotation for ton lots remains at $13.95 per 100 lbs. and 30c higher for less than ton lots.



READY-MIXED PAINTS.—Ready-mixed paints are firm, and dealers are now booking more freely for spring delivery. There is a general feeling that price will not decline before spring, and there is every possibility that there may be an advance before the end of the year. Most authorities claim that it is a wise move on the part of retailers to cover now for spring requirements. Linseed oil continues to hold at much higher prices than were in effect when present prices on paint were made. The dry color situation has not improved, and lead is still high in the primary markets. Costs of containers, labels, paint literature, labor, etc., are even higher than they were a few months ago. Varnishes remain unchanged, but firm. Varnish gums are high in price. One manufacturer placed a contract this week for material used in varnish making. The price was 35 per cent. higher than was paid for the same class of material a year ago. In some lines of cheaper varnishes it is possible to secure goods at any price, the varnish being made to suit the price. The same might be said about some lines of very cheap grade ready-mixed paints.

Turpentine Firm at Former Prices

TURPENTINE.—Prices for turpentine locally have held firm without advances being recorded. Receipts of turpentine at the primary market points of Savannah, Jacksonville and Pensacola, from April 1 to October 26, have been considerably in excess of the receipts for the same period last year. For the present year there has been delivered 232,041 casks, as against 199,646 casks for the same time last year. A considerable foreign demand is developing for the American product, and this is expected to give a firmness to the market. In speaking of the turpentine situation, the ''Savannah Weekly Naval Stores Review'' says:—''Spirits of turpentine is the cheapest raw commodity in America to-day. It has not enjoyed the advances that have come to many other commodities, but there is a growing belief that its underlying strength has been underestimated and that the time is not far distant when it will likewise enjoy an improvement in values such as other products of this country have known in the past year or two. While no one hopes

Stanley Tools

Stanley Adjustable Try and Mitre Square No. 21

The Blade is adjustable, and as it can be reversed, provides any size of try or mitre square within the capacity of the tool. In reversing, it is not necessary to remove the blade from the handle, consequently the tool is always assembled and ready for use.

The Edges of the Blade are machined, graduated in 8ths, 16ths and 32nds of inches, and the tool is square inside and out.

Both Handle and Blade are nickel-plated. Made in three sizes—6—9—12-inch blades.

Send for special circular.

FACTORY PRODUCTS LIMITED TORONTO

PLUG Clusters

Two outlets from a single socket.

These plug clusters give an extra socket without extra wiring, and are very serviceable for attaching household electrical devices, such as portable lamps, flatirons, fans, etc.

Standard finish in brushed brass.

Quick and very profitable sellers.

Factory Products Limited
Toronto, Ontario

(One of the units in our group of finishing shops)

WE are not only varnish makers but varnish users.

All our products are tested in our own finishing shops under actual working conditions before shipping.

This rigid inspection and practical criticism of our finishes from the consumer's standpoint enables us to insure absolute dependability.

Berry Brothers' label is an efficient varnish salesman, even the smallest buyers have learned that "If it's Berry's it's right."

Make your varnish business grow by featuring Berry Brothers' line.

We make a specially adapted varnish or enamel for every known use.

Write for our price list and interesting dealers' proposition.

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, Nov. 3.—Firmness still rules in the paint market. Higher prices are hinted at for ready mixed paints unless prices of lead and oil recede. To date there are no signs of weakening. The pig lead market continues firm and linseed oil holds at much higher levels than were quoted when present paint prices were named. The dry color situation has not improved to any great extent. Turpentine is slightly firmer.

"Utter Failure" in Argentine Flax

LINSEED OIL.—Reports from the Argentine could hardly be worse. The crop which had been reported a week or two ago as a 50 per cent. crop is now declared to be utterly despaired of. If ten per cent. can be harvested for the market, observers will be surprised it is claimed. There has been rain at last in some few isolated districts, but the rain arrived too late. The shortage if reports are true, in flax seed will be felt over the whole linseed using world. Users of linseed oil in quantity are preparing themselves for a high priced product, well over a dollar a gallon from the crusher for some time to come. To the retail at present linseed oil prices are maintained at last week's quotations no change having taken place in crushers' price but very little retail business was being cultivated by the paint manufacturers. Instead of selling the paint, men were buying, and even holders of large stocks are adding to their stocks. Reports on the Canadian crop are not entirely satisfactory, and threshing has been retarded by bad weather in the North West. Undoubtedly linseed oil prices will continue to be exceedingly firm, and probably higher than present quotations although there have been oscillations in the market even during the upward trend when the first definite details of Argentine drought devastation came to hand. Prices at present in Montreal are:

Linseed oil	Raw	Boiled
1 to 4 bbls...	$1.10-$1.13	$1.12½-$1.16
5 to 9 bbls...	$1.10-$1.11	$1.12½-$1.14

For smaller quantities the Hardware Trade was quoting for raw linseed $1.15, and for boiled, $1.18, with discount 2 per cent. off and 30 days allowed.

Turpentine May Go Up a Little

TURPENTINE.—Indications in the market for turpentine were towards firmness. The prices quoted ran the same as last week, but there are hints of higher priced turpentine due to primary market influence rather than to actual firming factors locally. Most firms have experienced no particular difficulty in getting sufficient supplies, and an actual scarcity is not immediately anticipated. Nevertheless the present scale of prices is considered likely to alter upwards a little. In Montreal turpentine was being quoted this week as under:

Turpentine	Per Imp. Gal.
1 barrel lots	67c-70c
2-4 barrels	66c-69c
5-10 barrels	65c-68c

White Lead in Oil Price is Steady

WHITE LEAD IN OIL.—Notwithstanding the very firm condition of the linseed oil market at present there has been no change in prices of white lead in oil in Montreal so far. The metal is in exceedingly firm market also however, and it would surprise no one very much to hear of an increase in this product's price which is at present $13.80 for 1 ton lots, and $14.10 for orders of less than a ton at a time.

A Rise in Paint Prices Hinted At

MIXED PAINTS.—With linseed oil so very high in price, and the metals lead and zinc also in firm market, and with hints of higher priced turpentine it is not peculiar that there have been very frequent suggestions here and there that the prices of mixed paints must be increased before long. Certainly more than one or two paint manufacturers have thought seriously on the subject during the past two weeks, and there have been interchanges of ideas on the subject also. The all important factor in the situation is of course the linseed oil. As every painter and paint dealer knows one third of the contents of every gallon can of mixed paint is linseed oil. If linseed oil goes to the $1.50 per gallon as some of the more excited rumors suggest, the natural result as regards mixed paint prices is obvious. Even if, as is considered quite likely, the price of linseed oil reaches the height of only a 21 cent increase per gallon over its cost when paint prices were fixed last, the effect would be either an increase of something like seven cents per gallon in mixed paints, or a corresponding burden for the manufacturers of paint to carry until things improve. There are manufacturers very strongly disposed to carry the burden of reduced returns rather than risk the greatly reduced demand for paint that might follow further increase in price. Still of raw materials go very much higher, and linseed oil gets beyond bounds, paint prices cannot help but rise, and they would rise very quickly if these factors continue to bear more strongly on the condition of things." Talking further on the subject this manufacturer mentioned that the great lack of labor to apply paint really reduces demand considerably, and has done so since the war's effects became apparent. Interesting also is the fact that while the sales of outdoor paints have shown little or no increase for the past two years, all indoor paints and paints for jobs about the house have shown a decided increase, this being because it is the women now who are doing the painting. The men are painting France and Flanders red.

TORONTO

TORONTO, Nov. 3.—There is a fairly good demand for paints and varnishes. Retailers are booking more freely for spring delivery. There is a feeling that prices will not be lower, and may be considerably higher unless oil and lead come down from the present high levels. There is an improved demand for glass owing to the advent of cooler weather. Prices remain unchanged, but are considerably firmer. Turpentine holds firm, with higher levels predicted. Linseed oil remains unchanged locally.

(Continued on page 102.)

Canadian-Made

Paint Products of Highest Quality

THE paint products manufactured by Brandram-Henderson Limited, are not only in favor with eight million Canadians, but are becoming increasingly popular in foreign countries.

The following B.H. products, among others, have been received with great favor by foreign importers, and have given better satisfaction than others manufactured for similar purposes.

For Industrial Purposes

Concrete and Cement Stains in eight colors have permanent waterproofing qualities. They sink into the surface, leaving a soft, velvety effect.

Concrete Proofing is colorless, closes the pores of the concrete, and hardens like the base itself.

Concrete Floor Paints in four colors, resist friction and oil and grease stains.

Anchor B-H Graphite Paint for metals is an absolute protection against all corrosive influences. Its ingredients are ground to extra fineness. It is put up conveniently for all purposes, ready mixed, in paste and in special form for machinery.

B-H Pure Red Lead for metals, including bridges, stacks, roofs, etc., produces smooth, elastic film—put up in paste and ready-mixed.

Factory Enamel White gives 19 to 36 per cent. more daylight in factories. Produces a glossy, washable, hard, lasting pure white surface.

Further information as to the products above and also other standard paints and varnishes, and quantity prices, may be obtained by addressing our Montreal Factory.

Protect Your 1917 Hammock Business

Raw materials are scarce and hard to get. No improvement in conditions is in sight. Demand is likely to be abnormal next summer. You are wise, therefore, in making sure of your requirements—this by placing your order now.

Direct from Factory to Dealer

Our Travellers are out with Our 1917 Line of

HAMMOCKS

Give them your order when they call —as a safeguard.

Remember this; we sell directly to dealers. There is a price advantage to you in this circumstance. Also, we have exclusive designs which protect you against cut-price competition.

We are well supplied with raw stock and will guarantee to deliver within specified time, all Hammocks for which we receive orders given through our travellers.

Please note this carefully. We are not trying to stampede you into buying. At the same time we urge you *in your own interests* to give your orders now at present prices and when we can guarantee deliveries.

Galt Robe & Hammock Company

Re Gauges of Sheets.

On account of it being practically impossible to secure galvanized sheets from England, owing to the war, American mills have decided that they will no longer roll the English gauges to meet this competition. However, they will continue to roll at 10¾ oz., which will be known as such or a 30 gauge, and will take the place of the former English 28 gauge.

They Always Like to Spin The Grinders

EVERYONE interested in a grinder likes to see and hear it run. Put your Carborundum Niagara Grinders on this display stand—it is made so that every grinder on the display can be turned. Let your customers realize how easily and smoothly a Niagara machine runs—how well they are made, how nicely finished.

With this stand you get a mighty attractive store fixture with a real display and sales influence. It will help you sell

Carborundum Niagara Grinders

Made in two sizes—quartered oak—given free with order for Niagara Grinders—ask for details

THE CARBORUNDUM COMPANY
NIAGARA FALLS, N. Y.

If interested, tear out this page and keep with letters to be answered.

Condensed or "Want" Advertisements

There is always someone, somewhere, who is looking for just such a proposition as you have to offer—and it is more than likely that he is a hardwareman and a subscriber to HARDWARE AND METAL. Let an advertisement on this page bring you together.

RATES (payable in advance): 2 cents per word first insertion, 1c per word subsequent insertion. An additional charge of 5 cents for each insertion is made when Box Number is required. Each figure counts as one word.

SITUATIONS WANTED

THE "CHANGING TIME" IS GETTING near. There are many firms who have vacancies on their sales or office staffs to fill during the next few months. If you want to qualify for some of these vacancies, tell your story briefly in a Condensed Advertisement, and try it out in Hardware and Metal. A twenty-five word advertisement may land you a permanent position with splendid prospects.

HARDWAREMAN, 13 YEARS' RETAIL EXperience, desires better position, either retail, wholesale or travelling. Age 29, married, teetotaler. Apply Box 402, Hardware and Metal. (45)

AGENCIES WANTED

MANUFACTURERS' AGENT IN CANADA desires Canadian rights on small article to sell through display advertising. Correspondence and catalogues solicited. Frank R. Burgess, 407 Hope Chambers, Ottawa, Canada.

MANUFACTURERS AGENT WITH WIDE connection among retail and wholesale hardware trade, desires agency for good lines in Toronto district. Would not object to covering larger territory when necessary. Have own car for local work. George H. Carson, 60 Wilson Ave., Toronto. (45)

THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms, is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal, under this heading.

STORE EQUIPMENT FOR SALE

YOU MUST HAVE A LOT OF OLD FIXtures around the store which are no longer of any value to you, but would prove very useful to someone else in the hardware business. Find a purchaser for this equipment through an advertisement on Hardware and Metal's Condensed Ad. Page.

FIFTY DOLLARS TIED UP IN OLD FIXtures that you are no longer using, would make a lot of money for you if invested in stock and turned over three or four times a year. Get your money out, by selling the fixtures to one of Hardware and Metal's readers who may be looking for exactly what you have to offer.

HARDWARE WINDOW DRESSING—THIS is the first book ever written devoted exclusively to Hardware Display. There are 256 pages and over 200 illustrations with full working descriptions. It is the purpose of this book to illustrate and explain how hardware windows may be dressed to the best advantage—how they can be made to sell goods. It is not a theoretical work but a collection of specimens of the best work and ideas of the most expert window dressers in the world. These men have contributed their experience covering the many phases of hardware window display. This volume, therefore, represents the sum total of information on this subject presented as concisely as is consistent with clearness. By following the simple illustrated directions given in "Hardware Window Dressing" any clever clerk can put in good hardware displays at no cost whatever. Size 8 x 11 inches. Price $2.60 postpaid. MacLean Pub. Co., 143 University Ave., Toronto.

SITUATIONS VACANT

WANTED — AN EXPERIENCED HARDware clerk. Apply, stating experience, wages expected, also give references, to Box 270, Orillia, Ont. (45)

WANTED — AN ALERT TRAVELLING salesman with hardware connections in Province of New Brunswick, to represent a large Canadian paint and varnish manufacturer. Apply to Sales Manager, P.O. Box 429, Montreal. (45)

WANTED—GOOD HARDWARE MAN WITH at least ten years' experience; permanent position, eastern Ontario; interest in the business open for the right man. State age, experience and salary expected. Box 403, Hardware and Metal. (44)

WANTED—TWO LOCK AND HARDWARE travelling salesmen by a prominent Manufacturer. One to cover Eastern and the other Western Canada. Experience in the sales of both stock and contract builders' hardware necessary. Address X. Y. Z., Box 404, Hardware and Metal. (45)

BUSINESS CHANCES

$15000 — HARDWARE — ONE OF THE best in western Ontario; splendid stand; large town; owner up in years, retiring. John New.

LET JOHN NEW, 154 BAY STREET, Toronto, sell your business. (4)

HARDWARE AND FURNITURE BUSINESS for sale in one of the best towns in western Ontario; reason for selling, outside interests. Apply Box 401, Hardware and Metal. (44)

IF YOUR HARDWARE BUSINESS IS FOR sale, who is more likely to buy it than a hardware man, be he merchant, clerk, or traveller? It is only hardware men who read Hardware and Metal, and a condensed advertisement in this paper offering your business for sale, will put you in touch only with the people who will be most interested.

MISCELLANEOUS

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada. (tf)

ADDING TYPEWRITERS WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited. Room 314, Stair Building, Toronto.

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fenson Elevator Co., Toronto.

MR. HARDWARE DEALER—YOU CANnot recommend any ash sifter with the talking points that the Burrowes Patent Dust-Proof Rocker Ash Sifter has. What other sifter has a closed scuttle, double rims, easy rocker motion, etc.? You can ought to sell this sifter because of its merit. The Burrowes Mfg. Co., 607 King St. W., Toronto. (50)

There's good Profit in

HEARTH FURNITURE

and an extra profit. For in selling hearth furniture — **Fire Irons, Andirons, Portable Baskets, Grate and Spark Guards**—you are increasing turnover. That is, you are not merely replacing our line with another, but are **Creating Brand New Business.**

DU PONT

Powders
are the
Hunter's Reliance

FOR dependability and stability the sporting powders made by this century-old company have gained world-wide recognition. This display of confidence is a proof of their popularity, and enables dealers to simplify stocks and make quick and profitable sales.

Du Pont Sporting Powders are noted for their high velocity, penetration and moderate recoil.

The leading ammunition companies load Du Pont Sporting Powders. They are also sold in bulk in popular metal canisters.

For shells and bulk packages, specify Du Pont loads —the hunter's reliance, and the best powders to sell.

MR. CLERK

YOUR SPARE TIME

WHAT do you do with it? By that we mean, is it **bringing you** any returns in the ways that go to assure your future success?

How would you like to know of a plan that will bring you in as much (if not more of an income) than your regular occupation. **Would you be interested?**

We have a plan by which hundreds of **clerks** throughout Canada are greatly increasing their weekly incomes. This plan interferes in no way with their regular duties. It helps them to become of more value to their employers as well. Besides it supplies them with extra funds.

Write, and we'll give full particulars concerning it. This places you under no **obligation,** we'll be glad to tell you all about it. Drop us a line **To-Day.**

The Great Business of Selling

MULTIPLYING users of your product, commodity or service—this is your great business. The more, the merrier.

The factor of multiplication is advertising. Nothing else can get you new users in the shortest possible time at lowest cost.

Use magazines for long-living publicity effects.

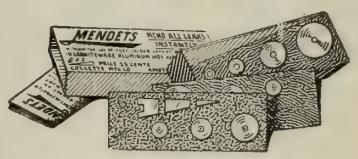
Use them for Economy's sake.

Use them for Prestige.

In Canada, the one conspicuous magazine is

MACLEAN'S MAGAZINE

It is an all-the-family magazine of the highest class—clean, esteemed, established
Can you name a better?
The conclusion is plain.



Published by

The MacLean Publishing Co., Limited

143-153 University Avenue, Toronto, Ontario

Like the onward march of the glacier, the force of example is irresistible, but infinitely slow. Advertising, however, is like the snowstorm that covers the country in a single night—but don't forget that if you want to keep the country covered you have got to keep the snow falling or the heat of competition will melt it.

Patent Patches

Every home in the land has kitchen utensils that go leaky—and that can be made leakless with

MENDETS
A PATENT PATCH

Their use requires no solder, cement or rivets. Work done swiftly. Results are sure. A fine line for you to sell. They will make you many an extra dollar—with little effort on your part.
